**Taking English Planning Law Scholarship Seriously** Maria Lee,Carolyn Abbot,2022-10-24 Planning is at the heart of the response to many of the significant challenges of our time, from the climate and environmental crises to social and economic inequalities. It is embedded in, as well as partially constituting, our democratic systems, so that the challenges of democratic decision-making in a complex society cannot be avoided when thinking about planning. Planning law raises some of the most fundamental questions faced by legal scholars, from the legitimacy of authority to the relationship between public and private rights and interests. And yet, planning law has been relatively neglected by legal scholars. The objective of Taking English Planning Law Scholarship Seriously is to create space for planning law scholarship in all of its variety, and for curiosity about law in all its complexity. The chapters reflect this diversity and complexity, covering a range of the objects of planning (from housing to energy to highways) and a multiplicity of planning tasks and tools (from compulsory purchase to contracting to planning inquiries).

**Futurescapes** Ralph Pordzik,2009 This book testifies to the growing interest in the many spaces of utopia. It intends to 'map out' on utopian and science-fiction discourses some of the new and revisionist models of spatial analysis applied in Literary and Cultural Studies in recent years. The aim of the volume is to side-step the established generic binary of utopia and dystopia or science fiction and thus to open the analysis of utopian literature to new lines of inquiry. The essays collected here propose to think of utopias not so much as fictional texts about future change and transformation but as vital elements in a cultural process through which social, spatial and subjective identities are formed. Utopias can thus be read as textual systems implying a distinct spatial and temporal dimension; as 'spatial practices' that tend to naturalize a cultural and social construction - that of the 'good life', the radically improved welfare state, the Christian paradise, the counter-society, etc. - and make that representation operational by interpellating their readers in some determinate relation to their givenness as sites of political and individual improvement. This volume is of interest for all scholars and students of literature who wish to explore the ways in which utopias of the past and recent present have circulated as media of cultural exchange and homogenization, as sites of cultural and linguistic appropriation and as foci for the spatial formation of national and regional identities in the English-speaking world.

**The Future of Business** Rohit Talwar,Gerd Leonhard ,Gray Scott ,B.J. Murphy,Ian Pearson,Laura Goodrich,Cornelia Daheim,Joyce Gioia,Calum Chace,2015-03-15 The Future of Business explores how the commercial world is being transformed by the complex interplay between social, economic and political shifts, disruptive ideas, bold strategies and breakthroughs in science and technology. Over 60 contributors from 21 countries explore how the business landscape will be reshaped by factors as diverse as the modification of the human brain and body, 3D printing, alternative energy sources, the reinvention of government, new business models, artificial intelligence, blockchain technology, and the potential emergence of the Star Trek economy.

**Future Matters** Barbara Adam,Chris Groves,2007 Future Matters concerns contemporary approaches to the future - how the future is known, created and minded. In a social world whose pace continues to accelerate the future becomes an increasingly difficult terrain. While the focus of social life is narrowing down to the present, the futures we create on a daily basis cast ever longer shadows. Future Matters addresses this paradox and its deep ethical implications. It locates contemporary approaches to the future in a wider sociological and historical framework of practices, traces differences and continuities, and shows how contemporary practices of futures-construction make taking responsibility for futures all but impossible.

**Strategic Thinking and the New Science** T. Irene Sanders,1998-05-05 The future is happening today, and the most successful organizations will be those that understand the dynamics of the big picture in which their decisions are being made. This book describes how to understand and influence that picture. Irene Sanders pioneered the application of chaos theory and complexity to strategic thinking -- the most essential skill in today's fast-paced business environment. Now, in this straightforward, easy-to-read book, she shows how the most up-to-date strategic thinking is done, and how you can begin using it in your enterprise. Sanders' original and practical approach moves far beyond traditional forecasting, futuring and scenario-building. The new science of chaos and complexity has shown scientists and business professionals alike the importance of looking at the world as a whole system, rather than as a collection of deterministic principles. Consequently, the human mind -- through the integration of intuition and intellect -- is now recognized as the only information processor capable of understanding the level of complexity in today's global business environment. By engaging the mind's eye through the use of visual thinking, Sanders shows you how to develop insight about the present and foresight about the future, thereby allowing you to see and influence the future as it is emerging. The new planning paradigm presented in Strategic Thinking and the New Science is nothing less than a transformation of the science of business. For the first time in history, we have the knowledge, tools and techniques to develop visual thinking as the essential insight/foresight skill of the future. In addition to breakthroughs neuroscientists have made about brain-mind interactions, artists and psychologists are revealing the role of imagery in the creative process. And now, the new field of scientific visualization brings all of this information together with computer graphics to demonstrate how visual images can be used to engage our imaginations, enhance learning -- and stimulate our deeper levels of awareness. In this groundbreaking book, Sanders is the first to define the new model of strategic thinking -- a model that is bound to revolutionize organizations of all types as they begin to see and influence their futures -- today.

**Onlearning: How disruptive education reinvents learning** José Cláudio Securato,2020-06-23 Onlearning - How disruptive education reinvents learning brings a new concept, which appears as a response to the desire for change in education, specifically in education for executives, in the face of the exponential and out-of-sync transformations of society, which happen through technology and revolutionize organizations, people's

lives and customs; with the aim of extracting the best from this evolution and expanding it in a maximized way into executive learning. The work consists of three parts: Part I deals with the history of work-oriented education, executive education, and business schools. It shows how the teaching of Administration was formalized, mainly by business schools, and what learning and cognition methodologies were developed by the various thinkers of the 19th and 20th centuries, whose models have repercussions until today. Part II outlines the scenario in which technology and digital transformation are consolidated as fundamental means for creating disruption in the most diverse areas of knowledge and industry sectors. It approaches how Clayton Christensen's theory of disruptive strategy defies the logic of traditional innovation, as well as what are the effects of new technologies on the economy, society and people's lives, and how fast are they advancing to become accessible, radically transforming reality. Finally, Part III deals with education and Saint Paul's disruptive proposal for executive education, Onlearning. It reflects on the need for education to concretely impact technological evolution in a broad way, in its economic and social aspect. It ends by presenting 20 conclusions on Onlearning, featuring objectives, actions, and projections for the future of education, based on the proposal to reinvent education through the resources that technology and digital transformation make available to everyone.

**10 Futures** Michael Pryor, 2012

**The Future, Declassified** Mathew Burrows, 2014-09-09 Twenty-five years ago when Mathew Burrows went to work for the CIA as an intelligence analyst, the world seemed frozen. Then came the fall of the Berlin Wall and the implosion of the Soviet Union; suddenly, unpredictability became a universal theme and foresight was critical. For the past decade, Burrows has overseen the creation of the Global Trends report—the key futurist guide for the White House, Departments of State and Defense, and Homeland Security. Global Trends has a history of making bold predictions and being right: \* In 2004, it argued that al-Qaeda's centralized operations would dissolve and be replaced by groups, cells, and individuals—the very model of the 2012 Boston bombings. \* In 2008, it included a scenario dubbed October Surprise, imagining a devastating late-season hurricane hitting an unprepared New York City. In *The Future, Declassified*, Burrows—for the first time—has expanded the most recent Global Trends report into a full-length narrative, forecasting the tectonic shifts that will drive us to 2030. A staggering amount of wholesale change is happening—from unprecedented and widespread aging to rampant urbanization and growth in a global middle class to an eastward shift in economic power and a growing number of disruptive technologies. Even our physical geography is changing as sea levels rise and faster commercial shipping routes open up through a warming Arctic region. The book concludes with its most provocative section: four fictional paths to 2030 with imagined storylines and characters based on analysis by the most authoritative figures in the intelligence community. As Burrows argues, we are living through some of the greatest and most momentous developments in history. Either we take charge and direct those or we are at their mercy. The stakes are particularly high for America's standing in the world and for ordinary Americans who want to maintain their quality of life. Running the gamut from scary to reassuring, this riveting book is essential reading.

**Decentralizing the Online Experience With Web3 Technologies** Darwish, Dina, 2024-03-18 The internet has undergone a remarkable metamorphosis since its inception. From the static web of the early days (Web 1.0) to the interactive and social web (Web 2.0), and now to the decentralized, intelligent, and immersive web (Web3), the evolution has been nothing short of astounding. This radical transformation has ushered in a new era in the digital realm, one that promises to reshape how we learn, communicate, transact, and interact with the world. *Decentralizing the Online Experience with Web3 Technologies* offers an exploration of the Web3 era, a transformative phase in the evolution of the internet. Beginning with the foundational understanding of Web3's core concepts, technologies, and tools, readers embark on a journey through the driving forces fueling its growth. The book demystifies blockchain technology, elucidating its basics and the practicalities of wallets and transactions. It delves into the world of cryptocurrencies, particularly Ethereum, and explores the disruptive potential of Decentralized Finance (DeFi). This knowledge empowers a diverse audience, from students to professionals and researchers across information technology, business, education, media, social sciences, and humanities.

**Routledge Handbook of Landscape Character Assessment** Graham Fairclough, Ingrid Sarlöv Herlin, Carys Swanwick, 2018-05-11 In this multi-authored book, senior practitioners and researchers offer an international overview of landscape character approaches for those working in research, policy and practice relating to landscape. Over the last three decades, European practice in landscape has moved from a narrow, if relatively straightforward, focus on natural beauty or scenery to a much broader concept of landscape character constructed through human perception, and transcending any of its individual elements. Methods, tools and techniques have been developed to give practical meaning to this idea of landscape character. The two main methods, Landscape Character Assessment (LCA) and Historic Landscape Characterisation (HLC) were applied first in the United Kingdom, but other methods are in use elsewhere in Europe, and beyond, to achieve similar ends. This book explores why different approaches exist, the extent to which disciplinary or cultural specificities in different countries affect approaches to land management and landscape planning, and highlights areas for reciprocal learning and knowledge transfer. Contributors to the book focus on examples of European countries – such as Sweden, Turkey and Portugal – that have adopted and extended UK-style landscape characterisation, but also on countries with their own distinctive approaches that have developed from different conceptual roots, as in Germany, France and the Netherlands. The collection is completed by chapters looking at landscape approaches based on non-European concepts of landscape in North America, Australia and New Zealand. This book has an introductory price of £125/\$205 which will last until 3 months after publication - after this time it will revert to £140/\$225.

**CrowdRising** Lorinda R. Rowledge, 2019-07-05 Open innovation enabled through crowdsourcing is one of the hottest topics in management strategy today. Particularly striking – and of vital importance to the world – are the pioneering efforts to apply crowdsourcing technology and open innovation to solve social, environmental, and economic sustainability challenges. *CrowdRising* sets out these challenges as context and then highlights the experiences of leaders and early adopters, identifies implementation guidelines, critical success factors and lessons learned, and finally projects where the field is going in the future. With a strong focus on the applications of crowdsourcing for innovation, engagement, and market intelligence, the book profiles the initiatives of companies, NGOs, and technology providers using crowdsourcing to develop these solutions to global problems. It addresses the key challenges impacting organizations: 1) identifying more sustainable ways to design, distribute, transport, recycle, and repurpose products; and 2) discovering and implementing the systems needed to transform global economic growth, drive human prosperity, and replenish the planet's resources.

**Futurescapes** Robert Tompkins, 1977

*The Routledge Companion to Cyberpunk Culture* Anna McFarlane, Lars Schmeink, Graham Murphy, 2019-11-28 In this companion, an international range of contributors examine the cultural formation of cyberpunk from micro-level analyses of example texts to macro-level debates of movements, providing readers with snapshots of cyberpunk culture and also cyberpunk as culture. With technology seamlessly integrated into our lives and our selves, and social systems veering towards globalization and corporatization, cyberpunk has become a ubiquitous cultural formation that dominates our twenty-first century techno-digital landscapes. The *Routledge Companion to Cyberpunk Culture* traces cyberpunk through its historical developments as a literary science fiction form to its spread into other media such as comics, film, television, and video games. Moreover, seeing cyberpunk as a general cultural practice, the Companion provides insights into photography, music, fashion, and activism. Cyberpunk, as the chapters presented here argue, is integrated with other critical theoretical tenets of our times, such as posthumanism, the Anthropocene, animality, and empire. And lastly, cyberpunk is a vehicle that lends itself to the rise of new futurisms, occupying a variety of positions in our regionally diverse reality and thus linking, as much as differentiating, our perspectives on a globalized technoscientific world. With original entries that engage cyberpunk's diverse 'angles' and its proliferation in our life worlds, this critical reference will be of significant interest to humanities students and scholars of media, cultural studies, literature, and beyond.

**Futurescapes** Tim Richardson, 2011-08-23 A fresh and highly informed overview of work by today's leading landscape architects from around the world. The urgency of global climate change has made the early

twenty-first century one of the most productive periods in landscape and garden design. Clients—corporate, civic, and private—are committed to the creation of innovative outdoor spaces. Curated by one of the world’s leading critics of contemporary landscape design, this collection profiles work by fifty design studios through texts, up-to-date projects, easy-to-read plans, and photographs. The practices have been chosen for their innovation and their unique contribution to current debates in landscape and garden design. The selection spans well-established names, such as Patrick Blanc (France), Fernando Caruncho (Spain), Dan Pearson (UK), and Stephen Stimson (US) to smaller, lesser-known studios, such as Ossart & Maurie`res (France), Wette und Kunecke (Germany), and Landscape India (India). Five essays identify and explain the prevailing preoccupations and practices of today’s designers with themes that range from the recent predilection for creating new landforms to the trend towards eco- expediency.

**Professionalism for the Built Environment** Simon Foxell,2018-08-21 In the aftermath of the Grenfell Tower tragedy, this new book provides thought provoking commentary on the nature of the relationship between society, the prevailing economic system and professionalism in the built environment. It addresses the changing responsibilities of professionals and in particular their obligation to act in the wider public interest. It is both an introduction to and an examination of professionalism and professional bodies in the sector, including a view of the future of professionalism and the organisations serving it. Simon Foxell outlines the history of professionalism in the sector, comparing and contrasting the development of the three major historic professions working in the construction industry: civil engineering, architecture and surveying. He examines how their systems have developed over time, up to the current period dominated by large professional services firms, and looks at some options for the future, whilst asking difficult questions about ethics, training, education, public trust and expectation from within and outside the industry. The book concludes with a six-point plan to help, if not ensure, that the professions remain an effective and essential part of both society and the economy; a part that allows the system to operate smoothly and easily, but also fairly and to the benefit of all. Essential reading for built environment professionals and students doing the professional studies elements of their training or in the process of applying for chartership or registration. The issues and lessons are applicable across all building professions.

**The University in Transformation** Sohail Inayatullah,Jennifer Gidley,2000-01-30 Taking a long-term historical and future perspective on the university is critical at this time. The university is being refashioned, often by forces out of the control of academics, students, and even administrators. However, there remain possibilities for informed action, for steering the directions that the university can take. This book maps both the historical factors and the alternative futures of the university. Whereas most books on the university remain focused on the European model, this volume explores models and issues from non-Western perspectives as well. Inayatullah and Gidley draw together essays by leading academics from a variety of disciples and nations on the futures of the university, weaving historical factors with emerging issues and trends such as globalism, virtualization, multiculturalism, and politicization. They attempt to get beyond superficial debate on how globalism and the Internet as well as multiculturalism are changing the nature of the university, and they thoughtfully assess these changes.
