

Futurescapes 2011 Version 11

Tim Richardson

Futurescapes Tim Richardson, 2011-08-23 A fresh and highly informed overview of work by today's leading landscape architects from around the world. The urgency of global climate change has made the early twenty-first century one of the most productive periods in landscape and garden design. Clients—corporate, civic, and private—are committed to the creation of innovative outdoor spaces. Curated by one of the world's leading critics of contemporary landscape design, this collection profiles work by fifty design studios through texts, up-to-date projects, easy-to-read plans, and photographs. The practices have been chosen for their innovation and their unique contribution to current debates in landscape and garden design. The selection spans well-established names, such as Patrick Blanc (France), Fernando Caruncho (Spain), Dan Pearson (UK), and Stephen Stimson (US) to smaller, lesser-known studios, such as Ossart & Maurie`res (France), Wette und Kunecke (Germany), and Landscape India (India). Five essays identify and explain the prevailing preoccupations and practices of today's designers with themes that range from the recent predilection for creating new landforms to the trend towards eco- expediency.

Professionalism for the Built Environment Simon Foxell, 2018-08-21 In the aftermath of the Grenfell Tower tragedy, this new book provides thought provoking commentary on the nature of the relationship between society, the prevailing economic system and professionalism in the built environment. It addresses the changing responsibilities of professionals and in particular their obligation to act in the wider public interest. It is both an introduction to and an examination of professionalism and professional bodies in the sector, including a view of the future of professionalism and the organisations serving it. Simon Foxell outlines the history of professionalism in the sector, comparing and contrasting the development of the three major historic professions working in the construction industry: civil engineering, architecture and surveying. He examines how their systems have developed over time, up to the current period dominated by large professional services firms, and looks at some options for the future, whilst asking difficult questions about ethics, training, education, public trust and expectation from within and outside the industry. The book concludes with a six-point plan to help, if not ensure, that the professions remain an effective and essential part of both society and the economy; a part that allows the system to operate smoothly and easily, but also fairly and to the benefit of all. Essential reading for built environment professionals and students doing the professional studies elements of their training or in the process of applying for chartership or registration. The issues and lessons are applicable across all building professions.

Taking Sustainable Cities Seriously, second edition Kent E. Portney, 2013-01-11 A theoretically driven comparison of sustainability programs in American cities, updated with the latest research and additional case studies. Today

most major cities have undertaken some form of sustainability initiative. Yet there have been few systematic comparisons across cities, or theoretically grounded considerations of what works and what does not, and why. In *Taking Sustainable Cities Seriously*, Kent Portney addresses this gap, offering a comprehensive overview and analysis of sustainability programs and policies in American cities. After discussing the conceptual underpinnings of sustainability, he examines the local aspects of sustainability; considers the measurement of sustainability and offers an index of "serious" sustainability for the fifty-five largest cities in the country; examines the relationship between sustainability and economic growth; and discusses issues of governance, equity, and implementation. He also offers extensive case studies, with separate chapters on large, medium-size, and small cities, and provides an empirically grounded analysis of why some large cities are more ambitious than others in their sustainability efforts. This second edition has been updated throughout, with new material that draws on the latest research. It also offers numerous additional case studies, a new chapter on management and implementation issues, and a greatly expanded comparative analysis of big-city sustainability initiatives. Portney shows how cities use the broad rubric of sustainability to achieve particular political ends, and he dispels the notion that only cities that are politically liberal are interested in sustainability. *Taking Sustainable Cities Seriously* draws a roadmap for effective sustainability initiatives.

Conceptualist Landscapes Paul Cooper, 2014-07-07 Conceptual gardens depend on inspiration which is the result of an exhaustive intellectual process. The starting point is an IDEA or stimulus that pushes the design along, rather than observing more conventional styles - whether classical or modernist - into which idea or relationships are fitted. Horticultural considerations, architectural or aesthetic doctrines and practically-based problem-solving are either abandoned or regarded as a means to an end, rather than the end in itself. Idea-driven design, therefore, cannot be taught by a 'rule-of-thumb' methodology. So, the way to design a conceptualist garden is not the theme of this book; nor does it contain 'of-the-peg' solutions for garden and landscape designers. Rather it encourages student and professional designers to think further towards their designed solutions.

Onlearning: How disruptive education reinvents learning José Cláudio Securato, 2020-06-23 Onlearning - How disruptive education reinvents learning brings a new concept, which appears as a response to the desire for change in education, specifically in education for executives, in the face of the exponential and out-of-sync transformations of society, which happen through technology and revolutionize organizations, people's lives and customs; with the aim of extracting the best from this evolution and expanding it in a maximized way into executive learning. The work consists of three parts: Part I deals with the history of work-oriented education, executive education, and business schools. It shows how the teaching of Administration was formalized, mainly by business schools, and what learning and cognition methodologies were developed by the various thinkers of the 19th and 20th centuries, whose models have repercussions until today. Part II outlines the scenario in which technology and digital transformation are consolidated as fundamental means for creating disruption in the most diverse areas of knowledge and industry sectors. It approaches how Clayton Christensen's theory of disruptive strategy defies the logic of traditional innovation, as well as what are the effects of new technologies on the economy, society and people's lives, and how fast are they advancing to become accessible, radically transforming reality. Finally,

Part III deals with education and Saint Paul's disruptive proposal for executive education, Onlearning. It reflects on the need for education to concretely impact technological evolution in a broad way, in its economic and social aspect. It ends by presenting 20 conclusions on Onlearning, featuring objectives, actions, and projections for the future of education, based on the proposal to reinvent education through the resources that technology and digital transformation make available to everyone.

Taking English Planning Law Scholarship Seriously Maria Lee, Carolyn Abbot, 2022-10-24 Planning is at the heart of the response to many of the significant challenges of our time, from the climate and environmental crises to social and economic inequalities. It is embedded in, as well as partially constituting, our democratic systems, so that the challenges of democratic decision-making in a complex society cannot be avoided when thinking about planning. Planning law raises some of the most fundamental questions faced by legal scholars, from the legitimacy of authority to the relationship between public and private rights and interests. And yet, planning law has been relatively neglected by legal scholars. The objective of *Taking English Planning Law Scholarship Seriously* is to create space for planning law scholarship in all of its variety, and for curiosity about law in all its complexity. The chapters reflect this diversity and complexity, covering a range of the objects of planning (from housing to energy to highways) and a multiplicity of planning tasks and tools (from compulsory purchase to contracting to planning inquiries).

Cyber-Physical Systems and Control Dmitry G. Arseniev,Ludger Overmeyer,Heikki Kälviäinen,Branko Katalinić,2019-11-29 This book presents the proceedings of the International Conference on Cyber-Physical Systems and Control (CPS&C'2019), held in Peter the Great St. Petersburg Polytechnic University, which is celebrating its 120th anniversary in 2019. The CPS&C'2019 was dedicated to the 35th anniversary of the partnership between Peter the Great St. Petersburg Polytechnic University and Leibniz University of Hannover. A wide range of theories and methodologies are currently being investigated and developed in this area to tackle various complex and challenging problems. Accordingly, CPSs represent a scientific and engineering discipline that is set to make an impact on future systems of industrial and social scale that are characterized by the deep integration of real-time processing, sensing, and actuation into logical and physical heterogeneous domains. The CPS&C'2019 brought together researchers and practitioners from all over the world and to discuss cross-cutting fundamental scientific and engineering principles that underline the integration of cyber and physical elements across all application fields. The participants represented research institutions and universities from Austria, Belgium, Bulgaria, China, Finland, Germany, the Netherlands, Russia, Syria, Ukraine, the USA, and Vietnam. Challenging Consumption Anna R. Davies, Frances Fahy, Henrike Rau, 2014-05-16 Sustainable consumption is a central research topic in academic discourses of sustainable development and global environmental change. Informed by a number of disciplinary perspectives, this book is structured around four key themes in sustainable consumption research: Living, Moving, Dwelling and Futures. The collection successfully balances theoretical insights with grounded case studies, on mobility, heating, washing and eating practices, and concludes by exploring future sustainable consumption research pathways and policy recommendations. Theoretical frameworks are advanced throughout the volume, especially in relation to social practice theory, theories of behavioural change and innovative visioning and backcasting methodologies. This groundbreaking book draws on some conceptual approaches which move beyond the responsibility of the individual consumer to take into account wider social, economic and political structures and processes in order to highlight both possibilities for and challenges to sustainable consumption. This approach enables students and policy-makers alike to easily recognise the applicability of social science theories.

Controlling Urban Events Andrea Pavoni, 2017-12-06 How does order emerge out of the multiplicity of bodies, objects, ideas and practices that constitute the urban? This book explores the relation between space, law and control in the contemporary city – and particularly in the context of urban ‘mega events’ – through a combined geographical and normative analysis. Informed by the recent spatial, affective and material ‘turns’ in the humanities and social sciences, Andrea Pavoni addresses this question by pursuing an innovative and trans-disciplinary approach, capable of accounting for the emergence of order in urban space both at the conceptual and empirical levels. Two overarching objectives are pursued. First, to account for the increasing convergence of logics, techniques and technologies of law, security and marketing into novel, potentially oppressive spatial configurations. Second, to envisage a consistent ethico-political strategy to counter this evolution, by rethinking originally and in radically spatial terms the notion of justice. Forging a sophisticated and original analysis, this book offers an analysis that will be of considerable interest to those working in critical urban geography, critical legal studies, critical event studies, surveillance and control studies.
