A Comparison Between Tracking with "optimum" Dynamics and Tracking with a Simple Velocity Control George G. Frost,1962 This study was undertaken to verify the optimum control dynamics reported in WADC TR 59-712 and to lend experimental validation to the method in which they were derived. A simple two group experiment was performed to compare tracking performance on a single axis tracking task using the optimum dynamics with tracking performance using a simple integrator (rate control). No significant difference was found in either learning rate or in tracking ability aft task was learned. A second experiment using the same experimental design requiring two-axis tracking was conducted to test the hypothesis that differences would appear only when the subjects were more heavily task-loaded. The 'optimum' dynamics produced reliably better performance than the rate control in the two axis task. This result supplied experimental validation for the predictions made using the human transfer and reported in WADC TR 59-712.

MPPT Tracker S.M.K.B. Edition Martin Sokol,Dídac Mallorquín Colina,Nikos Konstantinidis,Ahmed Berrada,2010-05-18 Solarcom is a French

company that is dedicated to supply, through solar energy, remote telecommunication devices such as repeaters of fiber optics or phone antennas. The project is commissioned by Solarcom for the EPS work team from ENIT, and consists in realize the design of a voltage regulator, based on maximum power point tracking algorithms (MPPT), to control the operating point of the power source formed by an array of photovoltaic panels, thus improving their performance and make effective control over the method and charge status of the battery. First is done a management, is explained in the first chapter, how is managed the different resources during the time to finish the project in the deadline. In the second chapter is made a little State of art to know how is the actual market in this area ant to decide the specifications and price target. To make the design of the device is necessary to model the physical environment in which the voltage regulator work to validate step by step, through simulation, different algorithms and components which will be based regulator. The software chosen to realize the mathematical models of the different physical devices on which operation of voltage regulator depends is MATLAB 2010b, the models were made by modeling and simulation tool SIMULINK. The hardware design of the device is implemented in Solid Works, and in this chapter is explained every component that is inside the device, how it function and why it's selected. In this chapter is showed all necessary to build it physically. In the software design chapter is explained every function used to make the regulator functional and implemented it in microcontroller, the code is made in C++ language by Code Warrior for Mororolla.

Advances in Visual Computing Richard Boyle,Bahram Parvin,Darko Koracin,Ronald Chung,Hammoud,Muhammad Hussain,Kar-Han Tan,Roger Crawfis,Daniel Thalmann,David Kao,Lisa Avila,2010-11-19 It is with great pleasure that we present the proceedings of the 6th International Symposium on Visual Computing (ISVC 2010), which was held in Las Vegas, Nevada. ISVC provides a common umbrella for the four main areas of visual computing including vision, graphics, visualization, and virtual reality. The goal is to provide a forum for researchers, scientists, engineers, and practitioners throughout the world to present their latest research findings, ideas, developments, and applications in the broader area of visual computing. This year, the program consisted of 14 oral sessions, one poster session, 7 special tracks, and 6 keynote presentations. The response to the call for papers was very good; we received over 300 submissions for the main symposium from which we accepted 93 papers for oral presentation and 73 papers for poster presentation. Special track papers were solicited separately through the Organizing and Program Committees of each track. A total of 44 papers were accepted for oral presentation and 6 papers for poster presentation in the special tracks.

Light Robotics – Structure-mediated Nanobiophotonics Jesper Glückstad, Darwin Palima, 2017-05-19 Light Robotics – Structure-Mediated Nanobiophotonics covers the latest means of sculpting of both light and matter for achieving bioprobing and manipulation at the smallest scales. The synergy between photonics, nanotechnology and biotechnology spans the rapidly growing field of nanobiophotonics. Nanoscale resolutions enable optical scientists to assess ever more accurate information. However, scientific hypothesis testing demands tools, not only for observing nanoscopic phenomena, but also for reaching into and manipulating nanoscale constituents. Taking an application based focus, this book explores how nanophotonics can productively be used in both the biomedical and life sciences, allowing readers to clearly see how structure-mediated nanobiophotonics can be used to increase our engineering toolbox for biology at the smallest scales. This book will be of great use to researchers and scientists working in the fields of optics and photonics. It will also be of great value to those working in the field of biotechnology, showcasing how

nanotechnology can help provide new, effective ways to solve biomedical problems. Presents cutting-edge research on the principles, mechanisms, optical techniques, fabrication, modeling, devices and applications of nanobiophotonics Brings together the diverse field of structure-mediated nanobiophotonics into one coherent volume Showcases how nanophotonics can be used to create new, more effective micro- and nano-biodevices
