Behaviourism in Studying Swarms: Logical Models of Sensing and Motoring Andrew Schumann,2018-05-25 This book presents fundamental theoretical results for designing object-oriented programming languages for controlling swarms. It studies the logics of swarm behaviours. According to behaviourism, all behaviours can be controlled or even managed by stimuli in the environment: attractants (motivational reinforcement) and repellents (motivational punishment). At the same time, there are two main stages in reactions to stimuli: sensing (perceiving signals) and motoring (appropriate direct reactions to signals). This book examines the strict limits of behaviourism from the point of view of symbolic logic and algebraic mathematics: how far can animal behaviours be controlled by the topology of stimuli? On the one hand, we can try to design reversible logic gates in which the number of inputs is the same as the number of outputs. In this case, the behaviouristic stimuli are inputs in swarm computing and appropriate reactions at the motoring stage are its outputs. On the other hand, the problem is that even at the sensing stage each unicellular organism can be regarded as a logic gate in which the number of outputs (means of perceiving signals) greatly exceeds the number of inputs (signals).

The Routledge Handbook of Media Use and Well-Being Leonard Reinecke, Mary Beth Oliver, 2016-06-23 The *Routledge Handbook of Media Use and Well-Being* serves as the first international review of the current state of this fast-developing area of research. The volume provides a multifaceted perspective on the beneficial as well as the detrimental effects of media exposure on psychological health and well-being. As a first-mover, it will define the field of media use and well-being and provide an essential resource for research and teaching in this area. The volume is structured along four central considerations: Processes presents concepts that provide a theoretical bridge between media use and well-being, such as psychological need satisfaction, recovery from stress and strain, self-presentation and self-enhancement, or parasocial interactions with media characters, providing a comprehensive understanding of the underlying processes that drive psychological health and well-being through media. Moderators examines both risk factors that promote negative effects on well-being and protective factors that foster positive media effects. Contexts bridges the gap between theory and real life by illustrating how media use can influence well-being and satisfaction in very different life domains, covering the full spectrum of everyday life by addressing the public, private, and work spheres. Audiences takes a look at the influence of life phases and life situations on the interplay of media use and well-being, questioning whether various user groups differ with regard to the effects of media exposure. Bringing together the expertise of outstanding international scholars from multiple disciplines, including communication, media psychology, social psychology, clinical psychology, and media education, this handbook sheds new light on the role of media in influencing and affecting emotions.

Conservation Charles Perrings, Ann Kinzig, 2021-05-11 A unified theory of conservation that addresses the broad problem of conservation, the principles that inform conservation choices, and the application of those principles to the management of the natural world. The conservation of natural resources, like that of any other asset, involves trade-offs. Yet, in a world faced with the harsh realities of climate change, crafting the right environmental policies is an increasingly urgent task.

In Conservation, Charles Perrings and Ann Kinzig bring together new research in economics and biodiversity to investigate conservation decisions and the theory behind them. Perrings and Kinzig apply the concept of conservation broadly to examine how the principles of conservation apply to the management of the natural world. They demonstrate that the same basic principles serve as the foundation of all rational conservation decisions, from managing financial assets to safeguarding at-risk ecosystems. Whether someone is deciding to hold or dispose of a stock or whether to exploit or preserve a natural resource, they are better off choosing to conserve a resource when its value to them, if conserved, is greater than its value when converted. The book also considers the context of such conservation decisions. Just as national tax rules influence choices about financial investments, environmental regulations within countries, and environmental agreements between countries, impact the decisions regarding natural resources. Building on their basic theory of conservation, Perrings and Kinzig address key issues in the field of environmental economics, including the valuation of ecosystem services and environmental assets; the limits on the substitutability of produced and natural capital; and the challenges posed by the often weak markets for ecosystem services oriented toward the public good. They also address the problem of scale: while decisions might be easier to make at the local level, many conservation policies need to apply at either the national or international level to succeed. Written by experts from both social and hard sciences, this book presents a unified theory of conservation and provides a model for a more effective way to approach the vitally important issue.
