11th International Symposium on Process Systems Engineering - PSE2012, 2012-12-31 While the PSE community continues its focus on understanding, synthesizing, modeling, designing, simulating, analyzing, diagnosing, operating, controlling, managing, and optimizing a host of chemical and related industries using the systems approach, the boundaries of PSE research have expanded considerably over the years. While early PSE research was largely concerned with individual units and plants, the current research spans wide ranges of scales in size (molecules to processing units to plants to global multinational enterprises to global supply chain networks; biological cells to ecological webs) and time (instantaneous molecular interactions to months of plant operation to years of strategic planning). The changes and challenges brought about by increasing globalization and the the common global issues of energy, sustainability, and environment provide the motivation for the theme of PSE2012: Process Systems Engineering and Decision Support for the Flat World. Each theme includes an invited chapter based on the plenary presentation by an eminent academic or industrial researcher Reports on the state-of-the-art advances in the various fields of process systems engineering Addresses common global problems and the research being done to solve them

Job Shop Lean Shahrukh A. Irani,2020-05-04 In the 1950's, the design and implementation of the Toyota Production System (TPS) within Toyota had begun.

In the 1960's, Group Technology (GT) and Cellular Manufacturing (CM) were used by Serck Audco Valves, a high-mix low-volume (HMLV) manufacturer in the United Kingdom, to guide enterprise-wide transformation. In 1996, the publication of the book Lean Thinking introduced the entire world to Lean. Job Shop Lean integrates Lean with GT and CM by using the five Principles of Lean to guide its implementation: (1) identify value, (2) map the value stream, (3) create flow, (4) establish pull, and (5) seek perfection. Unfortunately, the tools typically used to implement the Principles of Lean are incapable of solving the three Industrial Engineering problems that HMLV manufacturers face when implementing Lean: (1) finding the product families in a product mix with hundreds of different products, (2) designing a flexible factory layout that fits hundreds of different product routings, and (3) scheduling a multi-product multi-machine production system subject to finite capacity constraints. Based on the Author's 20+ years of learning, teaching, researching, and implementing Job Shop Lean since 1999, this book Describes the concepts, tools, software, implementation methodology, and barriers to successful implementation of Lean in HMLV production systems Utilizes Production Flow Analysis instead of Value Stream Mapping to eliminate waste in different levels of any HMLV manufacturing enterprise Solves the three Industrial Engineering problems that were mentioned earlier using software like PFAST (Production Flow Analysis and Simplification Toolkit), Sgetti and Schedlyzer Explains how the one-at-a-time implementation of manufacturing cells constitutes a long-term strategy for Continuous Improvement Explains how product families and manufacturing cells are the basis for implementing flexible automation, machine monitoring, virtual cells, Manufacturing Execution Systems, and other elements of Industry 4.0 Teaches a new method, Value Network Mapping, to visualize large multi-product multi-machine production systems whose Value Streams share many processes Includes real success stories of Job Shop Lean implementation in a variety of production systems such as a forge shop, a machine shop, a fabrication facility and a shipping department Encourages any HMLV manufacturer planning to implement Job Shop Lean to leverage the co-curricular and extracurricular programs of an Industrial Engineering department

Angels of Efficiency Florian Hoof, 2020-03-02 Angels of Efficiency traces the invention of film and the parallel rise of management consulting, telling the story of how these together brought about new forms of information visualization and visual management. The period from 1880 to 1930, author Florian Hoof argues, saw the genesis of a form of visual knowledge that provided a novel means to intervene in management processes. Visual management largely superseded oral and written forms of communication and decision-making, instituting a strategy for overcoming the mid-nineteenth-century crisis of control and resulting in a media-based form of rationality. Focusing largely on early corporate consulting in America by tracing the careers of Frank Gilbreth and his wife and business partner, Lillian Gilbreth, Hoof examines the rise and lasting effects of corporate consulting as a visual form. Framing consulting as a cultural technique that is characterized by media processes in which the boundaries of economic logic and legitimacy emerge, Angels of Efficiency forges a new approach to the history of consulting. In addition to pioneering a new field of film and media studies, Hoof contributes original research to American cultural and economic history, such as archival findings concerning Gilbreth's consulting efforts for the German Army during WWI. With this distinct and innovative interdisciplinary approach, Hoof has marshalled cinema and media studies, business history, and science and technology studies to make sense of the rise of consulting practices and their remarkable stability to this day.
