Jerald D. Harris

*That's No Dino!* Helaine Becker, 2021-06-01 A fun introduction to prehistoric creatures that are not dinosaurs, and why! Everyone knows what a dinosaur is, right? Well, maybe not. Dinosaurs are actually just one type of extinct animal from prehistoric times. So, what sets them apart? Here, readers are introduced to ten prehistoric animals. Each one looks like a dinosaur. But it's missing at least one key characteristic of all true dinosaurs. Animal by animal, each of those characteristics is added to a growing list, until, by the end of the book, readers know just what makes a dinosaur a dinosaur! A dinosaur by any other name is . . . not a dinosaur, of course!

**Dino Finder Dot-to-Dot** Jerald D. Harris, 2002-09 You already know the mighty T-Rex and the Apatosaurus, but have you heard of the Baryonyx, the Jobaria, and the Majungatholus? Get out your pencils and prepare to meet some of the more unusual sauruses ever! For example, the gigantic Acrocanthosaurus had extra-tall spines on its back while the flying Iberomesornis was only the size of a sparrow. All the dinosaurs shown here were discovered after 1990- or they are ones for which paleontologists have recently found good new skeletons. By connecting the dots and forming the pictures, you can learn about these amazing animals. (Color them in when you're done.) And, don't forget to look on the labeled map to find out where they lived, and the timeline to see when!

**Dinomania** Ulrich Merkl, 2015-11-25 Winsor McCay, the creator of Little Nemo in Slumberland, is internationally renowned as a pioneer in comics and animation. But author Ulrich Merkl's dedicated sleuthing has unearthed a never-published strip by McCay that was lost following the artist's untimely death. Titled simply Dino, it opens a surprising new window into McCay's life and work and showcases his exquisitely beautiful and delicate delineations (exactly reproduced from the original art). Merkl explores the influences McCay brought to the strip—including McCay's own Gertie the Dinosaur animated shorts, the animation in 1933's King Kong, and the growth of New York City from the Holland Tunnel to the Empire State Building—and traces our love of dinosaurs and monster movies down through the decades. Breathtakingly designed, each page of this deluxe oversize volume is overflowing with amazing imagery, with more than 650 photographs and illustrations (more than 250 in color) — most of them seen here for the first time in a century! An essential volume for everyone interested in the development of the comic strip — and our never-ending fascination with dinosaurs!

*Dinosaur Systematics* Kenneth Carpenter, Philip J. Currie, 1992-07-31 In recent years dinosaurs have captured the attention of the public at an unprecedented scale. At the heart of this resurgence in popular interest is an increased level of research activity, much of which is innovative in the field of palaeontology. For instance, whereas earlier palaeontological studies emphasized basic morphologic description and taxonomic classification, modern studies attempt to examine the role and nature of dinosaurs as living animals. More than ever before, we understand how these extinct species functioned, behaved, interacted with each other and the environment, and evolved. Nevertheless, these studies rely on certain basic building blocks of knowledge, including facts about dinosaur anatomy and taxonomic relationships. One of the purposes of this volume is to unravel some of the problems surrounding dinosaur systematics and to increase our understanding of dinosaurs as a biological species. *Dinosaur Systematics* presents a current overview of dinosaur systematics using various examples to explore what is a species in a dinosaur, what separates genders in dinosaurs, what morphological changes occur with maturation of a species, and what morphological variations occur within a species.
