Smart Rules for Smart Cities Eleonora Riva Sanseverino,Raffaella Riva Sanseverino,Valentina Vaccaro,Gaetano Zizzo,2014-07-23 This book explores the new rules and codes that are required in order to foster the implementation of smart city technologies with a view to meeting the environmental and energy challenges posed by dynamic contemporary cities with increasing populations. In particular, it proposes a methodological approach suitable for use when devising a smart urban/building code for local administrations, taking into account the current European regulatory framework (directives and technical norms) and evaluating the economic feasibility of the suggested measures. A case study is made of a large Mediterranean city in Italy that can be regarded as a paradigm of urban evolution, where a traditional individualism poses a cultural obstacle to the emerging need to share resources. Further features include a smart cities atlas, explanation of how to create local rules for sustainable building restoration/construction, and guidance on economic evaluation of the impact of building automation and passive measures for energy efficiency. The book, which has a multidisciplinary perspective, will be of value to all who are interested in the transition to smart cities that can meet sustainable development targets.

Percezione del futuro e consumi Stefania Fragapane,2007

Ethical Consumption James G. Carrier,Peter Luetchford,2012 Increasingly, consumers in North America and Europe see their purchasing as a way to express to the commercial world their concerns about trade justice, the environment and similar issues. This ethical consumption has attracted growing attention in the press and among academics. Extending beyond the growing body of scholarly work on the topic in several ways, this volume focuses primarily on consumers rather than producers and commodity chains. It presents cases from a variety of European countries and is concerned with a wide range of objects and types of ethical consumption, not simply the usual tropical foodstuffs, trade justice and the system of fair trade. Contributors situate ethical consumption within different contexts, from common Western assumptions about economy and society, to the operation of ethical-consumption commerce, to the ways that people's ethical consumption can affect and be affected by their social situation. By locating consumers and their practices in the social and economic contexts in which they exist and that their ethical consumption affects, this volume presents a compelling interrogation of the rhetoric and assumptions of ethical consumption.

Routledge Handbook of Food as a Commons Jose Luis Vivero-Pol,Tomaso Ferrando,Olivier De Schutter,Ugo Mattei,2018-12-17 From the scientific and industrial revolution to the present day, food – an essential element of life – has been progressively transformed into a private, transnational, mono-dimensional commodity of mass consumption for a global market. But over the last decade there has been an increased recognition that this can be challenged and reconceptualized if food is regarded and enacted as a commons. This Handbook provides the first comprehensive review and synthesis of knowledge and new thinking on how food and food systems can be thought, interpreted and practiced around the old/new paradigms of commons and commoning. The overall aim is to investigate the multiple constraints that occur within and sustain the dominant food and nutrition regime and to explore how it can change when different elements of the current food systems are explored and re-imagined from a commons perspective. Chapters do not define the notion of commons but engage with different schools of thought: the economic approach, based on rivalry and excludability; the political approach, recognizing the plurality of social constructions and incorporating epistemologies from the South; the legal approach that describes three types of proprietary regimes (private, public and collective) and different layers of entitlement (bundles of rights); and the radical-activist approach that considers the commons as the most subversive, coherent and history-rooted alternative to the dominant neoliberal narrative. These schools have different and rather diverging epistemologies, vocabularies, ideological stances and policy proposals to deal with the construction of food systems, their governance, the distributive implications and the socio-ecological impact on Nature and Society. The book sparks the debate on food as a commons between and within disciplines, with particular attention to spaces of resistance (food sovereignty, de-growth, open knowledge, transition town, occupations, bottom-up social innovations) and organizational scales (local food, national policies, South–South collaborations, international governance and multi-national agreements). Overall, it shows the consequences of a shift to the alternative paradigm of food as a commons in terms of food, the planet and living beings.

Beyond Alternative Food Networks Cristina Grasseni,2013-10-10 Food activism is core to the contemporary study of food - there are numerous foodscapes which exist within the umbrella definition of food activism from farmer's markets, organic food movements to Fair Trade. This highly original book focuses on one key emerging foodscape dominating the Italian alternative food network (AFN) scene: GAS (gruppi di acquisto solidale or solidarity-based purchase groups) and explores the innovative social dynamics underlying these networks and the reasons behind their success. Based on a detailed 'insider' ethnography, this study interprets the principles behind these movements and key themes such as collective buying, relationships with local producers and consumers, financial management, to the everyday political and practical negotiation involving GAS groups. Vitally, the author demonstrates how GAS processes are key to providing survival strategies for small farms, local food chains and sustainable agriculture as a whole. Beyond Alternative Food Networks offers a fresh and engaged approach to this area, demonstrating the capacity for individuals to join organised forms of alternative political ecologies and impact upon their local food systems and practices. These social groups help to create new economic circuits that help promote sustainability, both for the environment and labor practices. Beyond Alternative Food Networks provides original insight and in-depth analysis of the alternative food network now thriving in Italy, and highlights ways such networks become embedded in active citizenship practices, cooperative relationships, and social networks.

The Sociology of Food and Agriculture Michael Carolan,2021-09-26 Thoroughly revised and updated, the third edition of The Sociology of Food and Agriculture provides a cutting-edge, comprehensive introduction to the study of food and society. The book begins by examining the food economy, with chapters focusing on foodscapes, the financialization of food, and a new chapter dedicated to food and nutrition (in)security. In Part II, the book addresses community and culture. While some books only look at the interrelationships between food and culture, this section problematizes the food system from the standpoint of marginalized bodies. It contains chapters focusing on agricultural and food labor and the peasantries, topics which are often overlooked, and gender, ethnicity, and poverty. Part III examines food and the environment, with chapters addressing important topics such as agro-ecosystems, food justice, sustainable food, and agriculture and food sovereignty. The final part focuses on food futures and includes a brand-new chapter on sustainable diets and ethical consumption. The book concludes by showcasing how we can rethink food production and consumption in a way that can help heal social, political, and cultural divisions. All chapters draw on international case studies and include learning objectives, suggested discussion questions, and recommendations for further reading to aid student learning. The Sociology of Food and Agriculture is perfect for students of food studies, including food justice, food and nutrition security, sustainable diets, food sovereignty, environmental sociology, agriculture, and cultural studies.

Research Anthology on Strategies for Achieving Agricultural Sustainability Management Association, Information Resources,2022-02-18 Agriculture has been an enduring human tradition key to survival and civilization. However, after the advent of industrialization and agricultural growth, the industry has been met with several challenges including pollution, land use, and food insecurity. With the agricultural industry contributing to pollution and emissions, many have found it imperative to investigate the causes and seek out solutions. The Research Anthology on Strategies for Achieving Agricultural Sustainability discusses the issues that the agricultural industry currently faces and the technological opportunities that can be explored to help protect and predict crop growth and achieve more resilient agricultural processes. It analyzes the impact of agricultural pollution and food insecurity on a global scale, but also proposes solutions to promote agricultural sustainability. Covering topics such as bio-farming, smart farming, and population growth, this book is an indispensable resource for government officials, agricultural scientists, farmers, students and professors of higher education, activist groups, researchers, and academicians.

Food Production and Nature Conservation Iain J. Gordon,Herbert H.T. Prins,Geoff R. Squire,2016-11-25 Feeding the world's growing human population is increasingly challenging, especially as more people adopt a western diet and lifestyle. Doing so without causing damage to nature poses an even greater challenge. This book argues that in order to create a sustainable food supply whilst conserving nature, agriculture and nature must be reconnected and approached together. The authors demonstrate that while the links between nature and food production have, to some extent, already been recognized, until now the focus has been to protect one from the impacts of the other. Instead, it is argued that nature and agriculture can, and should, work together and ultimately benefit from one another. Chapters describe efforts to protect nature through globally connected protected area systems and illustrate how farming methods are being shaped to protect nature within agricultural systems. The authors also point to many ways in which nature benefits agriculture through the ecosystem services it provides. Overall, the book shows that nature conservation and food production must be considered as equally important components of future solutions to meet the global demand for food in a manner that is sustainable for both the human population and the planet as a whole.

Localizing Global Food Agni Kalfagianni,Sophia Skordili,2018-11-05 Short food supply chains (SFSCs) rely primarily on local production and processing practices for the provision of food and are, in principle, more sustainable in social, economic and environmental terms than supply chains where production and consumption are widely separated. This book reviews and assesses recent initiatives on this topic from an interdisciplinary perspective. In theoretical terms it draws on and advances two key concepts, namely, place (particularly embeddedness in local economic networks and communities) and governance (particularly in addressing sustainability concerns in an inclusive and socially just manner). Empirically, the book examines a diverse set of SFSCs such as small-scale entrepreneurship, farmers' markets, community supported agriculture and grassroots and solidarity networks. The main examples discussed are from Europe and North America, but the issues are applicable in a global context. The book is of interest to advanced students, researchers and professionals in food studies, sociology, geography, planning, politics and environmental studies.

Farming Systems Research into the 21st Century: The New Dynamic Ika Darnhofer,David Gibbon,Benoît Dedieu,2012-05-30 Farming Systems Research has three core characteristics: it builds on systems thinking, it depends on the close collaboration between social and biophysical sciences, and it relies on participation to build co-learning processes. Farming Systems Research posits that to contribute towards sustainable rural development, both interdisciplinary collaborations and local actor engagement are needed. Together, they allow for changes in understanding and changes in practices. This book gives an overview of the insights generated in 20 years of Farming Systems Research. It retraces the emergence and development of Farming Systems Research in Europe, summarises the state-of-the-art for key areas, and provides an outlook on new explorations, especially those tackling the dynamic nature of farming systems and their interaction with the natural environment and the context of action.

Handbook of Research on Teaching With Virtual Environments and AI Panconesi, Gianni,Guida, Maria,2021-02-19 The increasingly pervasive use of digital technology has catapulted society into an interconnected world where the natural boundaries between humankind and machine, virtual and real, individual and community have become less perceptible. As individuals interact with different digital technologies, they must build a digital intelligence, which must be further cultivated as it is a key competency for the future of school and work. Digital intelligence includes understanding the mutual strengths between people and technology, as well as developing an awareness in the use of digital tools in order to avoid common threats such as cyberbullying, addiction

to video games, techno-stress, and more. As adolescents continue to engage with virtual reality and 3D virtual worlds where the online and offline overlap and coincide, it is important to build this intelligence as well as utilize these technologies to promote successful learning. The Handbook of Research on Teaching With Virtual Environments and AI explores the new personalized educational opportunities that are available with digital technology and virtual environments that can be used within education. This book focuses on the use of these tools and how to navigate the use of new technologies such as AI and virtual environments for educational practices. While highlighting topics such as virtual worlds, game-based learning, intelligent tutoring, augmented reality, and more, this book is ideal for teachers, administrators, technologists, educational software developers, IT specialists, practitioners, researchers, academicians, and students interested in how virtual environments and AI are being implemented in teaching practices.
