Microcomputer Methods for Solar Design and Analysis Douglas Nordham,1981 Analysis methods for solar design allow the designer or researcher to investigate and, in many cases, predict the thermal performance of a particular building or system. These tools provide an alternative to constructing costly working models and often allow an extended forecast of system behavio, under varying loads and inputs, which may not be attainable through a physical representation. This brochure, developed by the Building Applications and Regulatory Support Branch, is intended to serve as a source guide for available software packages to be used on a variety of microcomputes. It is not to be viewed as a statement of advocacy for any of the methods described within. Detailed technical questions regarding the programs and data files described in this brochure are best directed to the contacts listed with each entry.
