Controversies in Cardiovascular Anesthesia Phillip Fyman,Alexander W. Gotta,2012-12-06 On 16 October 1846, an itinerant New England dentist named William T. G. Morton proved the anesthetic effect of diethyl ether in a public demonstration in the ether dome of the Bulfinch Building of the Massachusetts General Hospital in Boston. The patient, Gilbert Abbott, suffered no pain, and the surgeon, Dr. John C. Warren, was able to complete a suture ligation of a vascular tumor of the jaw without the hurry that until then was so necessary. The operation proved a failure, since the tumor recurred; but the demonstration of ether's anesthetic effect was a great success. Operative pain was conquered, and surgery could advance from a crude and unscientific practice where speed was paramount, and the major body cavities could not be entered, into the unique blend of science and art that it is now. Gentlemen, this is no humbug, supposedly muttered Warren, perhaps the last noncontroversial assessment of anesthesiology to be made by a surgeon. The screams of resisting patients in pain were stilled, and quiet entered the operating room for the first time. But the new science of pain relief was quickly wrapped in controversy. An argument immediately arose as to who could legitimately claim primacy for the discovery. Morton's attempt to hide the true nature of his anesthetic agent, coupled with an effort to patent the discovery, clouded his reputation and stimulated other claimants to push themselves forward.

Lees' Loss Prevention in the Process Industries Frank Lees,2012-11-05

Safety in the process industries is critical for those who work with chemicals and hazardous substances or processes. The field of loss prevention is, and continues to be, of supreme importance to countless companies, municipalities and governments around the world, and Lees' is a detailed reference to defending against hazards. Recognized as the standard work for chemical and process engineering safety professionals, it provides the most complete collection of information on the theory, practice, design elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books (and cross-referencing systems) would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers and managers can be found in this all-encompassing three volume reference instead. The process safety encyclopedia, trusted worldwide for over 30 years Now available in print and online, to aid searchability and portability Over 3,600 print pages cover the full scope of process safety and loss prevention, compiling theory, practice, standards, legislation, case studies and lessons learned in one resource as opposed to multiple sources

Emergency Response Guidebook U.S. Department of Transportation,2013-06-03

Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.

Handbook of Hydraulic Resistance I. E. Idelchik,2005 The handbook has been composed on the basis of processing, systematization and classification of the results of a great number of investigations published at different time. The essential part of the book is the outcome of investigations carried out by the author. The present edition of this handbook should assist in increasing the quality and efficiency of the design and usage of industrial power engineering and other constructions and also of the devices and apparatus through which liquids and gases move.

WHO Guidelines for Indoor Air Quality ,2010 This book presents WHO guidelines for the protection of public health from risks due to a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.
