*Transnational Generations in the Arab Gulf States and Beyond* Kyoko

Matsukawa,Akiko Watanabe,Zahra R. Babar,2023-12-01 This book examines the recent migration phenomenon in the Arab Gulf states for work and residence. It sheds light on the transnationality of diverse groups of migrants from different generations, and unpacks how migrants' multiple senses of belonging, orientations and adaptive strategies have shaped contemporary migration in the Gulf region. In turn, the analysis presented here shows how the Arab Gulf states' citizenship and educational policies affect second-generation migrants in particular. Through a series of fine-grained ethnographic case studies, the authors demonstrate the ways in which these second-generation migrants construct their identities in relation to their putative 'home' country in the Gulf as well as their complex relationship to their parents' countries of origin. This is what underpins the deeply transnational character of their lives, choices and notions of belonging. While migration scholars often situate these groups as 'temporary', this does not in fact capture the reality of temporariness for the migrants themselves, their children or their dependants. The result is a complex and ongoing construction of identity that shapes the way of life for millions of migrants. Relevant to scholars of migration and international studies, particularly focused on the Middle East, *Transnational Generations in the Arab Gulf States and Beyond* is also of interest to social scientists researching student mobility in higher education, intergenerational families, identity politics and globalisation.

*E-Democracy for Smart Cities* T.M. Vinod Kumar,2017-05-16 This book highlights the rightful role of citizens as per the constitution of the country for participation in Governance of a smart city using electronic means such as high speed fiber optic networks, the internet, and mobile computing as well as Internet of Things that have the ability to transform the dominant role of citizens and technology in smart cities. *Routledge Handbook of Citizenship in the Middle East and North Africa* Roel Meijer,James N. Sater,Zahra R. Babar,2020-11-23 This comprehensive Handbook gives an overview of the political, social, economic and legal dimensions of citizenship in the Middle East and North Africa from the nineteenth century to the present. The terms citizen and citizenship are mostly used by researchers in an off-hand, self-evident manner. A citizen is assumed to have standard rights and duties that everyone enjoys. However, citizenship is a complex legal, social, economic, cultural, ethical and religious concept and practice. Since the rise of the modern bureaucratic state, in each country of the Middle East and North Africa, citizenship has developed differently. In addition, rights are highly differentiated within one country, ranging from privileged, underprivileged and discriminated citizens to non-citizens. Through its dual nature as instrument of state control, as well as a source of citizen rights and entitlements, citizenship provides crucial insights into state-citizen relations and the services the state provides, as well as the way citizens respond to these actions. This volume focuses on five themes that cover the crucial dimensions of citizenship in the region: Historical trajectory of citizenship since the nineteenth century until independence Creation of citizenship from above by the state Different discourses of rights and forms of contestation developed by social movements and society Mechanisms of inclusion and exclusion Politics of citizenship, nationality and migration Covering the main dimensions of citizenship, this multidisciplinary book is a key resource for students and scholars interested in citizenship, politics, economics, history, migration and refugees in the Middle East and North Africa.

*The Clostridia* Julian I. Rood,Bruce A. McClane,J. Glenn Songer,Richard W. Titball,1997-04-30 The clostridia are a group of bacteria of considerable medical and economic importance and include species responsible for generating the most potent toxins known to humans. The Clostridia: Molecular Biology and Pathogenesis is a unique work, comprising the most complete reference on the clostridia for over 20 years, bringing together the results from some of the most innovative and exciting research in the past decade. Using a principle-oriented rather than taxonomic approach, the results from molecular biology research are placed in the context of their clinical significance, and the disease process as a whole. This state-of-the-art work is truly comprehensive, covering and integrating the diverse topics of genetics, physiology, pathogenesis and cell biology. Written and edited by world-renowned authorities, material is presented to give the reader an up-to-date knowledge of the pathogenic species of this important genus. Background information is followed by details of the genetics, molecular biology, biochemistry and

disease mechanisms. The structure, function and mode of action of toxins and other virulence determinants is clearly presented. As such, this work will prove essential for students, teachers, research microbiologists, infectious disease clinicians, toxin specialists, and all those working in medical or veterinary bacteriology, microbial genetics and the pharmaceutical industries. Covers appropriate medical and veterinary topics Contains authoritative contributions by international experts Presents the current state of knowledge and areas for future research Truly comprehensive--covers topics from molecular biology and physiology

**Clostridial Neurotoxins** Cesare Montecucco, 2013-11-11 Tetanus has been known from the very beginning of medical literature since it was first described by Hippocrates of Cos in the fifth century B.C. For 24 centuries it was considered a neurological disease until the breakthrough of CARLE and RATIONE (1884) who demonstrated its infectious etiology. Following the establishment of purified cultures of *Clostridium tetani* (KITASATO 1889), FABER (1890), and TIZZONI and CATIANI (1890) demonstrated that the disease is actually an intoxication caused by a proteic neurotoxin. This toxin was shown by BRUSHCHETIINI (1892) to move retroaxonally and to act at the spinal cord level. Soon thereafter VAN ERMENGEN (1897) demonstrated that botulism is also due to intoxication with a protein toxin produced by bacteria of the genus *Clostridium*. These bacteria and their spores are ubiquitous, and the majority of them do not produce neurotoxins. The selective advantage of producing such potent toxin is still a matter of speculation (see Popoff, this volume). The next major advance was the discovery that tetanus neurotoxin 1 can be converted by formaldehyde treatment to a nonpathogenic but still fully immunogenic form, and that this can be used successfully as a vaccine to prevent tetanus (RAMON and DESCOMBEY 1925). Similar vaccines (toxoids) can be prepared with botulism neurotoxins (see MIDDLEBROOK and BROWN, this volume). The prevention of tetanus by vaccination (see Galatzka and Gasse, this volume) is one of the great successes of basic research coupled with an efficient public medicine service.

**Anaerobic Infections in Humans** Sydney Finegold, 2012-12-02 *Anaerobic Infections in Humans* focuses on the human diseases caused by anaerobic bacteria. This book acknowledges the depth and breadth of the role of anaerobes in diseases of humans, and provides comprehensive reviews by internationally recognized authorities on the various disease states. The book begins with the classification and taxonomy of anaerobes and the laboratory diagnosis and therapy of anaerobic infections in humans. Infection of different body parts are discussed separately in each chapter. The book also looks into the in vitro susceptibility data for anaerobic bacteria and the mechanisms of resistance and resistance transfer in anaerobic bacteria.

**Tomorrow Nothing** Jason Rogers, 2005-09 Everyone is afraid of dying. One of the only ways to live forever is to become remembered by becoming a celebrity. The novelist becomes insane with the prospect of dying. But there are crazy people everywhere, which

is what will be found out while reading this novel. With the very writer of Tomorrow Nothing, Jim Morrison, the reader, a stagehand for the novel Tomorrow Nothing, Robert Frost, Ernest Hemingway, Dylan Thomas, and Legion For We Are Many Demons as characters running through a surrealistic world of insanity and chaos, Tomorrow Nothing promises to be the bizarre anti-novel.

*LISREL Approaches to Interaction Effects in Multiple Regression* James Jaccard,Choi K Wan,1996-03-21 With detailed examples, this book demonstrates the use of the computer program LISREL and how it can be applied to the analysis of interactions in regression frameworks. The authors consider a wide range of applications including: qualitative moderator variables; longitudinal designs; and product term analysis. They describe different types of measurement error and then present a discussion of latent variable representations of measurement error which serves as the foundation for the analyses described in later chapters. Finally they offer a brief introduction to LISREL and show how it can be used to execute the analyses. Readers can use this book without any prior training in LISREL and will find it an excellent introduction to analytic methods that deal with the problem of measurement error in the analysis of interactions.
