*Weather* Kristin Rattini,2013 Explores the causes of everyday weather phenomena, including how clouds form, why tornadoes twist, and how the sun helps life grow --

Climate Change Mike Hulme,2021-07-27 Written by a leading geographer of climate, this book offers a unique guide to students and general readers alike for making sense of this profound, far-reaching, and contested idea. It presents climate change as an idea with a past, a present, and a future. In ten carefully crafted chapters, Climate Change offers a synoptic and inter-disciplinary understanding of the idea of climate change from its varied historical and cultural origins; to its construction more recently through scientific endeavour; to the multiple ways in which political, social, and cultural movements in today's world seek to make sense of and act upon it; to the possible futures of climate, however it may be governed and imagined. The central claim of the book is that the full breadth and power of the idea of climate change can only be grasped from a vantage point that embraces the social sciences, humanities, and natural sciences. This vantage point is what the book offers, written from the perspective of a geographer whose career work on climate change has drawn across the full range of academic disciplines. The book highlights the work of leading geographers in relation to climate change; examples, illustrations, and case study boxes are drawn from different cultures around the world, and questions are posed for use in class discussions. The book is written as a student text, suitable for disciplinary and inter-disciplinary undergraduate and graduate courses that embrace climate change from within social science and humanities disciplines. Science students studying climate change on inter-disciplinary programmes will also benefit from reading it, as too will the general reader looking for a fresh and distinctive account of climate change.

**Polar Climate** Jasper Williams,2007 Polar Climate is one of four books that make up the National Geographic Theme Set:: Weather and Climate. It is Book A.Each book in the set is written at a different reading standard, yet covers the same key concepts about the theme Weather and Climate. This enables you to cater for all students in your class by teaching the same content to every student - from struggling to fluent readers - with books that cater for different reading needs.The goal of this set is for all students in your

**Climate Change** National Geographic Learning (Firm),2014 According to most scientists, Earth's atmosphere has warmed by about 1.4 degrees Fahrenheit in the past 100 years. The result has been melting glaciers, rising sea levels, and more extreme weather events. Some people say that current climate change is part of the natural cycle

of changes on Earth. Many scientists, however, think that Earth's climate is changing because of increased greenhouse gases in the atmosphere. Climate Change examines how countries around the world are taking steps, such as conservation, to lessen the effects of climate change.

*Tropic of Chaos* Christian Parenti, 2011-06-28 From Africa to Asia and Latin America, the era of climate wars has begun. Extreme weather is breeding banditry, humanitarian crisis, and state failure. In *Tropic of Chaos*, investigative journalist Christian Parenti travels along the front lines of this gathering catastrophe--the belt of economically and politically battered postcolonial nations and war zones girding the planet's midlatitudes. Here he finds failed states amid climatic disasters. But he also reveals the unsettling presence of Western military forces and explains how they see an opportunity in the crisis to prepare for open-ended global counterinsurgency. Parenti argues that this incipient climate fascism -- a political hardening of wealthy states-- is bound to fail. The struggling states of the developing world cannot be allowed to collapse, as they will take other nations down as well. Instead, we must work to meet the challenge of climate-driven violence with a very different set of sustainable economic and development policies.

**Desert Climate** Jasper Williams, 2007 Desert Climate is one of four books that make up the National Geographic Theme Set:: Weather and Climate. It is Book C. Each book in the set is written at a different reading standard, yet covers the same key concepts about the theme Weather and Climate. This enables you to cater for all students in your class by teaching the same content to every student - from struggling to fluent readers - with books that cater for different reading needs. The goal of this set is for all students in you

**Ask an Expert: Climate Change** Richard Spilsbury, 2009-07-01 From hurricanes to heatwaves, find out what you need to know about weather today.

**Global Warming and the Climate Crisis** Bruce E. Johansen, 2023-01-01 This textbook introduces readers to basic scientific principles of climate change. Based on extensive empirical evidence, it explains weather events that indicate climate change's evolution and presents important topics connected to climate change, such as political controversies, climate policy, as well as Native American perspectives. Finally, it presents attempted solutions, including policy recommendations and technological proposals for necessary changes in our world. Providing a well-written and easy-to-follow overview of knowledge of science-based geophysical facts, including thermodynamics, the book puts a strong emphasis on why expeditious action on global warming is urgent. The book also explains why smart greenhouse-gas reduction strategies will ignite economic growth, generate new domestic jobs, protect public health, and strengthen energy security. Not assuming a scientific background on the part of the reader, *Global Warming and the Climate Crisis: Science, Spirit, and Solutions* offers an ideal supplemental reading in many types of courses in Earth sciences, climate policy, climate change sciences, as well as politics of climate change, from high school through undergraduate. General readers also will benefit from its treatment of this very important and timely issue.

Environmental Change Andrew Goudie,1977 Global Environments through the Quaternary delves into the environmental changes that have taken place during the Quaternary: the two to three million years during which man has inhabited the Earth. Taking the reader through the Pleistocene and the Holocene, the book describes the evidence that has helped us to characterize environmental changes during these two epochs. It then explores the changes captured by more recent meteorological records in the period up to the present day. Current climate change research foretells of potentially catastrophic sea-level changes in the future; chapter seven examines sea-level changes throughout the Quaternary, putting current concerns into perspective. The book closes with a look at the environmental basis of climate change - and the impact of human activity upon it.--BOOK JACKET.
