The Eighteenth-Century Composite State D. Hayton, J. Kelly, J. Bergin, 2010-05-13 A pioneering exploration of the phenomenon of the composite state in Eighteenth-century Europe. Employing a comparative approach, it combines the findings of new research on Ireland with broader syntheses of major composite states in Europe – those of France, Austria and Poland-Lithuania.

GIS Data Conversion Handbook Glenn E. Montgomery, Harold C. Schuch, 1993 This landmark book addresses the data conversion issues involved in geographic information systems (GIS) technology. Converting paper-based maps to digital files can be expensive, complicated, and time consuming. It is the first comprehensive handbook that cohesively integrates the many complex issues of data conversion into a single publication for the GIS professional as well as for the student or layperson. Written and edited by international authorities on GIS conversion, the handbook covers the subject from basic conversion issues and map digitizing to advanced data capture techniques.

Electric Energy Mohamed A. El-Sharkawi, 2004-12-28 Digital systems, computer engineering, communications, imaging... the ever-increasing specialization within the field of electrical engineering led many schools to shift their traditional energy conversion courses from the core electrical engineering curricula to the elective curricula. Recently, however, the ongoing search for renewable energy, the societal impact of blackouts, the environmental

impact of generating electricity, along with the new ABET criterion have contributed to renewed interest in electric energy as a core subject. *Electric Energy: An Introduction* effectively reinvents the traditional electric energy course into one relevant to all electrical and most mechanical engineering students. Along with the standard topics of power electronics and electromechanical conversion, the text also covers energy resources, power plants, environmental impacts of power generation, power system operation, renewable energy, and electrical safety. Most of the topics are related to issues encountered daily in practice, and most of the examples are from real systems and use real data. Emphasis on modeling and analysis, a flexible structure, and exceptional relevance to real-life issues make this text an outstanding choice. It brings together for the first time all of the topics needed to build the broad-based background today's engineers - and the engineers of tomorrow - need.

Judaism in Christian Eyes Yaacov Deutsch,2012-06-28 This book examines Christian ethnographic writing about the Jews in early modern Europe, offering a systematic historical analysis of this literary genre and arguing

its importance for better understanding both the period in general and Jewish-Christian relations in particular. The book focuses on nearly 80 texts from Western Europe (mostly Germany) that describe the customs and ceremonies of the contemporary Jews, containing both descriptions and illustrations of their subjects. Deutsch is one of the first scholars to study these unique writings in extensive detail. He examines books in which Christian authors describe Jewish life and provides new interpretations of Christian perceptions of Jews, Christian Hebraism, and the attention paid by the Hebraist to contemporary Jews and Judaism. Since many of the authors were converts, studying their books offers new insights into conversion during the period. Their work presents new perspectives the study of religion, developments in the field of anthropology and ethnography, and internal Christian debates that arose from the portrayal of Jewish life. Despite the lack of attention by modern scholars, some of these books were extremely popular in their time and represent one of the important ways by which Jews were perceived during the period. The key claim of the study is that, although almost all of the descriptions of Jewish customs are accurate, the authors chose to concentrate mainly on details that show the Jewish ceremonies as anti-Christian, superstitious, and ridiculous; these details also reveal the deviation of Judaism from the Biblical law. Deutsch suggests that these ethnographic descriptions are better defined as polemical ethnographies and argues that the texts, despite their polemical tendency,

represent a shift from writing about Judaism as a religion to writing about Jews, and from a mode of writing based on stereotypes to one based on direct contact and observation.

A Practical Approach to Metaheuristics using LabVIEW and MATLAB® Pedro Ponce-Cruz,Arturo Molina Gutiérrez,Ricardo A. Ramírez-Mendoza,Efraín Méndez Flores,Alexandro Antonio Ortiz Espinoza,David Christopher Balderas Silva,2020-06-08 Metaheuristic optimization has become a prime alternative for solving complex optimization problems in several areas. Hence, practitioners and researchers have been paying extensive attention to those metaheuristic algorithms that are mainly based on natural phenomena. However, when those algorithms are implemented, there are not enough books that deal with theoretical and experimental problems in a friendly manner so this book presents a novel structure that includes a complete description of the most

important metaheuristic optimization algorithms as well as a new proposal of a new metaheuristic optimization named earthquake optimization. This book also has several practical exercises and a toolbox for MATLAB® and a toolkit for LabVIEW are integrated as complementary material for this book. These toolkits allow readers to move from a simulation environment to an experimentation one very fast. This book is suitable for researchers, students, and professionals in several areas, such as economics, architecture, computer science, electrical engineering, and control systems. The unique features of this book are as follows: Developed for researchers, undergraduate and graduate students, and practitioners A friendly description of the main metaheuristic optimization algorithms Theoretical and practical optimization examples A new earthquake optimization algorithm Updated state-of-the-art and research optimization projects The authors are multidisciplinary/interdisciplinary lecturers and researchers who have written a structure-friendly learning methodology to understand each metaheuristic optimization algorithm presented in this book.
