**Map Work And Practical Geography** Gopal Singh, 2009-11-01 The book

encompasses a wide range of topics on practical geography taught to the B.A./B.Sc. students of Indian universities. Numerous examples and diagrams have been included in the text with the sole aim of enabling the students to have a comprehensive grasp of the subject. Attempt has also been made to present a well-balanced treatment of each topic. Topics like measurement of ground areas from maps, determination of class-interval for choropleth maps, representation of agricultural, industrial and transport data, choice of map projections, interpretation of topo-sheets, etc., have been included in this book and discussed in detail. Books treating various aspects of practical geography need regular up-dates. Therefore, the latest available material has been used to update this edition. Guidance of learned college and university teachers has enabled the author to present the subject-matter clearly and accurately. It is hoped that in addition to developing a keen interest for practical geography, it will form the basis for a more advanced study of the subject among the students.

*An Introduction to Geographical Economics* Steven Brakman, Harry Garretsen, Charles van Marrewijk, 2001-12-06 The need for a better understanding of the role location plays in economic life was first and most

famously made explicit by Bertil Ohlin in 1933. However it is only recently, with the development of computer packages able to handle complex systems, as well as advances in economic theory (in particular an increased understanding of returns to scale and imperfect competition), that Ohlin's vision has been met and a framework developed which explains the distribution of economic activity across space. This book is an integrated, non-mathematical, first-principles textbook presenting geographical economics to advanced students. Never avoiding advanced concepts, its emphasis is on examples, diagrams, and empirical evidence, making it the ideal starting point prior to monographic and journal material. Contains copious computer simulation exercises, available in book and electronic format to encourage learning and understanding through application. Uses case study material from North America, Europe, Africa and Australasia.
