**Chinese Military Reform in the Age of Xi Jinping: Drivers, Challenges, and Implications**  
Joel Wuthnow, Phillip Charles Saunders, China's People's Liberation Army (PLA) has embarked on its most wide-ranging and ambitious restructuring since 1949, including major changes to most of its key organizations. The restructuring reflects the desire to strengthen PLA joint operation capabilities- on land, sea, in the air, and in the space and cyber domains. The reforms could result in a more adept joint warfighting force, though the PLA will continue to face a number of key hurdles to effective joint operations. Several potential actions would indicate that the PLA is overcoming obstacles to a stronger joint operations capability. The reforms are also

intended to increase Chairman Xi Jinping's control over the PLA and to reinvigorate Chinese Communist Party (CCP) organs within the military. Xi Jinping's ability to push through reforms indicates that he has more authority over the PLA than his recent predecessors. The restructuring could create new opportunities for U.S.-China military contacts.

*Climate Change and Air Pollution Rais*

Akhtar, Cosimo Palagiano, 2017-10-05 This book discusses regional and international climate-change, air-pollution and human-health scenarios. The research, from both industrialized and developing countries, focuses on region-specific perspectives of climate change impacts on air pollution. After analyzing the variations of climate data over recent decades, the authors consider the different effects of climate change on air pollution and health. As stressed by the IPCC, "pollen, smoke and ozone levels are likely to increase in a warming world, affecting the health of residents of major cities. Rising temperatures will worsen air quality through a combination of more ozone in cities, bigger wild fires and worse pollen outbreaks," according to a major UN climate report. The report follows the World Health Organization in finding that air pollution is the world's greatest environmental health risk, killing 7 million people in 2014 (compared to 0.4 million deaths due to malaria). Deteriorating air quality will most affect the elderly, children, people with chronic ill-health and expectant mothers. Another report suggests that more than 5.5 million people die prematurely

each year due to air pollution with over half of those deaths occurring in China and India. A study on the air pollution in the USA, suggests that more than half of US population lives in areas with potentially dangerous air pollution, and about six out of 10 of the top cities for air pollution in the USA are located in the state of California. In the face of future climate change, scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems, especially in more populated regions of the world. It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution. Additionally the authors consider the various measures that different countries and groups of countries, like the European Union, have adopted to mitigate the problems arising from climate change and to safeguard the health of population. The book examines the increasing incidence of diseases largely caused by climate change. The countries/regions covered in this study include the USA, Northern Europe (U.K)., Southern Europe ( Italy), Canada, Australia, East Asia, Russia, Hong Kong, Taiwan, Thailand, Malaysia, Indonesia, India, South Africa, Mexico, Brazil, Caribbean countries, and Argentina.

*Energy in Africa* Manfred Hafner, Simone Tagliapietra, Lucia de Strasser, 2018-08-06 This open access book presents a picture of the current energy challenges on the African continent (and

the Sub-Saharan region in particular) and proposes pathways to an accelerated energy transition. Starting with an analysis of the status quo and the outlook for Africa's energy demand and energy access, it provides an account of the available resources, including hydrocarbons and renewable energy resources, which are playing an increasingly crucial role. It then moves on to analyze the level of investment required to scale-up Africa's energy systems, shedding light on the key barriers and elaborating on potential solutions. It also provides a suggestion for improving the effectiveness of EU-Africa cooperation. While mainly intended for policymakers and academics, this book also speaks to a broader audience interested in gaining an overview of the challenges and opportunities of the African energy sector today and in the future.

*Engineering* Unesco,2010-01-01 This report reviews engineering's importance to human, economic, social and cultural development and in addressing the UN Millennium Development Goals. Engineering tends to be viewed as a national issue, but engineering knowledge, companies, conferences and journals, all demonstrate that it is as international as science. The report reviews the role of engineering in development, and covers issues including poverty reduction, sustainable development, climate change mitigation and adaptation. It presents the various fields of engineering around the world and is intended to identify issues and challenges facing engineering, promote better understanding of engineering and its role, and highlight ways of making engineering

more attractive to young people, especially women.--Publisher's description.

In the Tracks of Tamerlane: Central Asia's Path to the 21st Century Dan Burghart,Theresa Sbonis-Helf,2012-07-18 When examining the ebb and flow of events in the region called Central Asia, one is struck by the magnitude of the impact that this area has had throughout history. Yet in spite of this record, very little is known about this part of the world today. Central Asia always has found itself wedged between Europe and Asia, and as such, has been at the crossroads of relations between the two. In physical terms, this can be seen graphically in the trade routes of the Great Silk Road. In philosophical terms, it is an area where Western beliefs met and mingled with Eastern ways, often resulting in unusual and unique hybrids of thought and culture. Nor has the area's significance been limited to that of providing a meeting place for other cultures. For over 100 years, between the thirteenth and fifteenth centuries, the armies of Genghis Khan and later Tamerlane spread from Central Asia to conquer and exert their influence over an area larger than the conquests of Alexander, Rome or Hitler. The repercussions of these conquests can still be seen today and serve as a reminder of the impact the region has had, and may again have, on world events.
