**The Logistics and Supply Chain Innovation Handbook** John Manners-Bell,Ken Lyon,2019-07-03 The Fourth Industrial Revolution is now transforming logistics and supply chain industries. Consumer habits are changing fast and supply chains are having to adapt to meet the challenges created by this dynamic new environment. Traditional logistics operating models are under threat. Incumbent freight operators across the entire transport and warehousing spectrum have been forced to develop strategies to effectively compete with new start-ups. The Logistics and Supply Chain Innovation Handbook provides a comprehensive overview of all the major new technologies and business models currently under development and looks at this process of disruption in detail. The Logistics and Supply Chain Innovation Handbook covers many important topics, such as crowd sourcing and shipping, on-demand delivery, autonomous vehicles, automation in the warehouse, electric vehicles and alternative fuels. It provides readers with a straightforward and easy to understand assessment of these innovations and their impact on the industry. Online supporting resources include PowerPoints and sample case studies.

**Non-technological Innovations for Sustainable Transport** Alexandra Hyard,2014-08-07 Examining non-technological innovations for environmentally and socially-friendly transport, this book provides the reader with a better understanding of this often overlooked topic. It features four illustrative case studies, and presents a concise review of the core transport modes (road, rail and marine transport). Transport companies are compelled to innovate due to economic and environmental pressures, and the aim of these innovations is to improve fuel efficiency and ultimately to transform energy use in the transport sector. Whilst many of these innovations are technological, they can conversely be non-technological in nature. This book is intended for students and researchers interested in economics, environmental economics and economics of innovation. It also offers a useful resource to industry professionals interested in ecology and transport.

More student friendly than ever, the **SEVENTH EDITION** helps readers understand both the fundamental role and importance of transportation in companies and in society, as well as the complex environment in which transportation service is provided today. Taking a managerial approach, the authors give students the tools to successfully adapt to this fast-paced and rapidly changing industry. The text is organized into three parts. Part I provides a framework and foundation for the role of transportation from a micro and macro perspective in supply chains. **Strategic Innovation** Allan Afuah,2009-04 In today's fast-changing business environment, those firms that want to remain competitive must also be innovative. Innovation is not simply about developing new technologies into new products or services, but in many cases, finding new models for doing business in the face of change. It often entails changing the rules of the game. Strategic Innovation demonstrates to students how to create and appropriate value using new game strategies to gain competitive advantage. The book begins with a summary of the major strategic frameworks and showing the origins of strategic innovation. Next, Afuah gives a thorough examination of contemporary strategy from an innovation standpoint, including: how to develop strategy in the face of change a detailed framework for assessing the profitability potential of a strategy or product consideration of how both for-profit and non-profit organizations can benefit from new game strategies. With a wealth of quantitative examples of successful strategies, as well as descriptive cases, Strategic Innovation will complement courses in strategy, and technology and innovation.

*Logistics Competencies, Skills, and Training* Alan McKinnon,Christoph Flöthmann,Kai Hoberg,Christina Busch,2017-09-01 Despite the spread of automation and new supply chain management paradigms, logistics remains dependent on a rather specific set of skills and competencies, whether for managerial, administrative, or blue-collar jobs, such as trucking or warehousing. This dependence implies that the logistical performance of businesses, industries, and nation states is strongly influenced by the quantity and quality of the workforce. Insufficient resources of a competent and properly trained workforce in logistics adversely affect the quality of service, reduce productivity in sectors dependent on logistics, and ultimately reduce trade competitiveness. While other interventions that affect logistics performance—such as international infrastructures, trade corridors, regulations, and services—have already been reviewed extensively, this report is the first to cover the contributions of human resources and explore how to develop skills and improve competencies, especially in developing countries. The study proposes a framework for the skills needed according to the logistics activity (such as transportation or warehousing) or the type and level

of responsibility. Based on several sources, including recent surveys carried out by the World Bank and the Kühne Logistics University, the report uncovers where the skills constraints are according to the type of job or countries. Findings include that logistics is an industry struggling to hire skilled workers, although with differences between developed countries (where trucker shortages are more acute) and developing economies (where managerial shortages are more widespread). Typically, blue-collar logistics jobs have lower status and lower pay than blue-collar jobs in other industries; they are thus less attractive for skilled workers. In developing countries with a potentially available workforce, lack of vocational preparation for careers in logistics means that less-skilled workers are not easily re-skilled. Logistics tasks at the upper end of the occupational hierarchy and those with high information technology content often require an upskilling of employees to keep pace with new technology. Yet the problem is not confined to recruitment. The surveys point to limited resources, money, and staff time allocated to training, especially in developing countries. Realizing the promise of quality jobs from the growth of logistics worldwide requires a coordinated effort by logistics companies, professional associations, training providers, and policy makers. Through a combination of facilitation, regulation, advice, financial instruments, and land use planning, governments can exert significant influence.

Anderson, 2015 This book is about how Air National Guard-Air Force Reserve Command Test Center (AATC) was created and how it helped the Air Reserve Components (ARC) become a relevant combat force through innovative approaches to modernizing the combat capability of its fighters. It tells how innovative airmen in the ARC, or on active duty, the Department of Airforce (DAF) civilian work force, and civilian contractors worked together to create a crucial function for the Air Force.
