Depression: A Silent Culprit in Health and Disease Puneetpal Singh, Sarabjit

Mastana, 2015-10-28 Depression is considered as a complex problem with potentially serious economic consequences for affected individuals as well as public healthcare systems. There is much debate among laypersons, patients, academics and clinicians about the causes of depression, its clinical significance and the effect of conventional medical interventions such as antidepressants. This monograph showcases some aspects of depression through specific reviews on some of the intricacies behind its mechanism. The book includes five reviews on the subject, covering the significance of depression in patient well-being, an update on P300 wave findings and the link with clinical depression, the genomics behind depression, the effects of ageing on the onset of depression in stroke patients, and tensor imaging techniques used in studies on patients exhibiting suicidal behaviors as a result of major depressive disorder. This reference provides useful updates for healthcare workers, neuroscientists and behavioral scientists interested in basic research on depression and in planning to develop methods to study depression in either a clinical or laboratory setting

*Depression in Old Age* Cornelius L. E. Katona, 1994-09-20 Eliminates several misconceptions about depression in the elderly--namely: that it is an inevitable consequence of aging and that the hazards involved in its treatment outweigh those of the condition itself.

Condenses the latest research information available on depression in old age, identifying some of the questions as yet unanswered and summarizing the answers already known.

*Psychological Assessment of Veterans* Dr. Shane S. Bush, 2014-07-30 Psychological assessment is practiced in wide-ranging settings to address the varied clinical and administrative needs of veteran populations. Such assessment blends record review, clinical interviews of the veteran and collateral sources of information, behavioral observations, and psychological testing. This book promotes the care and well-being of veterans by bringing together knowledgeable and experienced psychologists to discuss a range of psychological assessment methods and procedures. It aims to help patients and their families, healthcare providers, and concerned citizens gain an improved understanding of veterans' cognitive functioning, emotional states, personality traits, behavioral patterns, and daily functioning. The book begins with a history of the psychological assessment of veterans and investigates its efficacy in different settings, including outpatient mental health, long-term care, primary care, home-based primary care, and telemental health. Later chapters address assessment of a variety of disorders or presenting problems, including substance use disorders, psychotic disorders, mood disorders and suicidal thoughts and behavior, PTSD and other anxiety disorders, attention-deficit/hyperactivity disorder, dementia, pain and pain-related disorders, and polytrauma. The book concludes with important special considerations,

including assessment of symptom and performance validity, assessment of homeless veterans and health-related quality of life, and ethical, legal, and professional issues. Psychological Assessment of Veterans provides an essential reference and guide for clinical psychologists, including those working in the subspecialties, and psychology trainees who work with veterans.

Maruish, 2017-04-21 The second edition Handbook of Psychological Assessment in Primary Care Settings offers an overview of the application of psychological screening and assessment instruments in primary care settings. This indispensable reference addresses current psychological assessment needs and practices in primary care settings to inform psychologists, behavioral health clinicians, and primary care providers the clinical benefits that can result from utilizing psychological assessment and other behavioral health care services in primary care settings.

**Guide to Assessment Scales in Parkinson's Disease** Pablo Martinez-Martin, Carmen Rodriguez-Blazquez, Maria João Forjaz, Kallol Ray Chaudhuri, 2014-10-16 This Guide assesses the key clinimetric attributes in the assessment of Parkinson's Disease (PD), with the intention to offer rapid and pragmatic information on the most relevant scales used in PD. Parkinson's disease affects approximately 4 million people globally and is most commonly seen in people over the age of 50. The disease is a progressive disorder of the nervous system, and presents a number of movement and cognitive symptoms, thereby greatly affecting a patient's quality of life. The use of scales for assessment in neurological disorders such as PD arises from the need to quantify disorders and states (such as constructs as disability, symptoms, quality of life). Assessment scales are often categorised into two categories: generic (i.e. those scales usable in any health condition), and specific (i.e. scales developed

for exclusive use in PD). They can have a variety of components: single-item and multi-item or composite scale; unidimensional and multidimensional; and as disease-centered and patient-centered measures. The creation and validation of scales is complex, with scales undergoing numerous studies to assess criteria such as acceptability, reliability, and responsiveness. In the process of validation of a scale the following attributes should be tested to ascertain whether a scale is an effective instrument of measurement.

**Handbook of Depression in Alzheimer's Disease**  
G.S. Smith, 2015-08-05 Advances in healthcare have led to an extended life expectancy throughout the developed world, but cognitive impairment in later life, and Alzheimer's disease (AD) in particular, remains one of the intractable problems which can blight quality of life as we age. Depression in Alzheimer's disease is an additional factor which has a significant impact on disability, disease progression, and caregiver burden. This book, volume 4 of the Advances in Alzheimer's Disease book series which is published in coordination with the Journal of Alzheimer's Disease, presents papers which reflect the progress in recent years of research into depression in AD. This research has focused on several areas, including the improvement of diagnostic criteria and outcome measures for depression and depressive symptoms in AD, genetic and imaging studies to elucidate the neurobiological mechanisms, and clinical trials of

antidepressants. The book is divided into sections on phenomenology, epidemiology, neuropsychology, neurobiology and neuropathology, neuroimaging, genetics, and treatment. Providing a stimulus to further research in this challenging area by engaging both basic and clinical researchers, this book will be of interest to all those whose work involves understanding and dealing with depression in those suffering from Alzheimer's disease.

Oxford Textbook of Palliative Medicine Geoffrey Hanks (Deceased), Nathan I. Cherny, Nicholas A. Christakis, Stein Kaasa, 2011-07-21 Emphasising the multi-disciplinary nature of palliative care, the fourth edition of this text also looks at the individual professional roles that contribute to the best-quality palliative care.

**Essential Reviews in Geriatric Psychiatry** Rajesh R. Tampi, Deena J. Tampi, Juan J. Young, Meera Balasubramaniam, Pallavi Joshi, 2022-04-01 This book critically reviews 75 important published papers that influence the practice of geriatric psychiatry. This book will assist anyone who is interested in the care of older adults with psychiatric disorders. It was written by thought leaders who shape the way geriatric psychiatry is currently practiced in the United States. All the major psychiatric disorders in later life are covered including anxiety disorders, bipolar disorders, depressive disorders, neurocognitive disorders, psychotic disorders, sleep disorders, and substance use disorders. It also reviews important studies on suicides in late life and interventional procedures in geriatric psychiatry like the ECT, and also evaluates the adverse

effects of psychotropic medications on older adults with psychiatric disorders. The editors of the book along with input from members of the teaching and training committee of the American Association for Geriatric Psychiatry (AAGP) have chosen 75 published papers from the field of geriatric psychiatry that they believe provides the highest knowledge-yield/impact for practicing clinicians and educators in the field of geriatric mental health. The AAGP is a national association that represents and serves its members and the field of geriatric psychiatry. These 75 papers are critically appraised by the members of AAGP using a standardized format and a summary of these papers and their practical application is provided by these experts. This information can be used by anyone who wants to learn about the field of geriatric psychiatry.

**Diabetes in Old Age** Alan J. Sinclair, Trisha Dunning, Leocadio Rodríguez Mañas, Medha Munshi, 2017-02-13 This new edition of the popular and market-leading *Diabetes in Old Age* features up-to-date and comprehensive information about the key aspects of managing older people with diabetes, predominantly type 2 diabetes. With a strong evidence-based focus throughout, the entire range of issues surrounding diabetes and its many complications are covered, each with a clear focus on how they relate directly to the older patient. Varying approaches to optimizing diabetes care in the community, primary care and secondary care health care arenas are presented, and the importance of comprehensive functional assessment is emphasized. Coverage of areas unique to an

ageing population of older people with diabetes such as falls management, frailty and sarcopenia, and cognitive dysfunction form a key cornerstone of the book. In every chapter, best practice points and key learning outcomes are provided, as well as published evidence bases for each major conclusion. Diabetes in Old Age, 4th edition is essential reading for diabetologists and endocrinologists, diabetes specialist nurses, primary care physicians, general physicians and geriatricians, podiatrists and dieticians with an interest in diabetes, as well as all health professionals engaged in the delivery of diabetes care to older people.

*Elderly Chinese in Pacific Rim Countries* Iris

Chi, Neena L. Chappell, James Lubben, 2001-04-01 With longer life expectancy, most countries are now experiencing rapid ageing among their populations. Ethnic Chinese populations are no exception to these demographic transformations. During the twentieth century, there has been a wide dispersion of Chinese people throughout the world, as well as dramatic socio-political changes within China. These unique factors have strained

traditional filial norms and necessitated a re-examination of intergenerational relationships and the roles of elderly Chinese people. This book investigates the varied adaptations of social support systems and social integration among ageing Chinese populations within a diverse set of countries in the Pacific Rim region. The book is a collection of scholarly papers addressing such topics as community care, family support, one-child families and social isolation. Each paper illustrates the importance of social support networks and social integration to the quality of life for elderly Chinese persons living in dissimilar circumstances.

Handbook on the Neuropsychology of Aging and Dementia Lisa D. Ravdin, Heather L. Katzen, 2019-02-14 This comprehensive update offers practical advice for professionals working in neuropsychology with older adults. Focusing on fundamentals, common issues, special considerations, and late-life cognitive disorders, respected names in this critical specialty address a wide range of presenting problems and assessment, diagnostic, and treatment concerns. Throughout, coverage pays keen attention to detail, bringing real-world nuance to large-scale concepts

and breaking down complex processes into digestible steps. And like its predecessor, the new Handbook features recommendations for test batteries and ends each chapter by extracting its "clinical pearls." A sampling of the topics covered:

- Assessment of depression and anxiety in older adults.
- The assessment of change: serial assessments in dementia evaluations.
- Elder abuse identification in older adults.
- Clinical assessment of postoperative cognitive decline.
- Cognitive training and rehabilitation in aging and dementia.
- Differentiating mild cognitive impairment and cognitive changes of normal aging.
- Evaluating cognition in patients with chronic obstructive pulmonary disease.

This Second Edition of the Handbook on the Neuropsychology of Aging and Dementia offers a wealth of expert knowledge and hands-on guidance for neuropsychologists, gerontologists, social workers, and other clinicians interested in aging. This can be a valuable reference for those studying for board certification in neuropsychology as well as a resource for veteran practitioners brushing up on key concepts in neuropsychology of age related disorders.
