Ursula Schwitalla

Women in Architecture Ursula Schwitalla, 2021-02-08 Key works by today's leading female architects, with reflections on their craft and design ethos Despite the number of women who have shaped the discipline, female architects still frequently struggle to receive the recognition their work deserves. This volume serves as a manifesto for the great achievements of contemporary female architects the world over, paying tribute to their experiences as artists and designers as well as women in a male-dominated field. *Women in Architecture* profiles 36 architects working today, detailing their personal creative philosophies through examples of their projects. In addition to its examination of the current state of architecture, this volume also explores works by a number of women who served as pioneering figures of the craft, seeking to expose and eventually dismantle the structural discrimination against women architects both inside and outside of the field. Featured architects include: Mona Bayr, Odile Decq, Elke Delugan-Meissl, Julie Eizenberg, Manuelle Gautrand, Annette Gigon, Silvia Gmür, Cristina Guedes, Melkan Gürsel, Itsuko Hasegawa, Anna Heringer, Fabienne Hoelzel, Helle Juul, Karla Kowalski, Anupama Kundoo, Anne Lacaton, Regine Leibinger, Dorte Mandrup, Rozana Montiel, Kathrin Moore, Farshid Moussavi, Carme Pinós, Nili Portugali, Paula Santos, Kazuyo Sejima, Annabelle Selldorf, Pavitra Sriprakash, Siv Helene Stangeland, Brigitte Sunder-Plassmann, Lene Tranberg, Billie Tsien, Elisa Valero, Natalie de Vries, Andrea Wandel, Helena Weber and Lu Wenyu.

Flexible Ridesharing Volker Handke, Helga Jonuschat, 2012-12-14 Individual mobility is one of the most important needs of modern society and an important link between private, public and economic life. In contrast, transport also entails severe environmental and social burdens, foiling current efforts for sustainable development. As the main source of CO₂ emissions, transport is a prominent driver for climate change, and individual car traffic is responsible for nearly a third of the total energy consumption. However, we have to consider that many commuters feel indeed very dependent on their car. Here, ridesharing promises to contribute to environmental protection, while still offering individual mobility. Although ridesharing options have been discussed since many years, internet and smartphones provide completely new opportunities to find ridesharing partners today. Thus, this book deals with current efforts on implementing flexible internet- and phone-based ridesharing services. With a main focus on the users' perspective, their demands and acceptance limits, we aim to explore success factors for non-profit, but also commercial ridesharing concepts.

After-sales Service of Engineering Industrial Assets Vicente González-Prida Díaz, Adolfo Crespo Márquez, 2014-01-10 This book explores the practical implementation of an advanced after-sales

management framework devoted to warranty management. The framework is intended for companies producing either standardized or customized products and such a management tool will facilitate organizational improvement and support innovative decision making processes for technical assistance in after-sales services. “After–sales Service of Engineering Industrial Assets” comprises a proposal for a warranty management framework, with an account of the different methods that can be used to improve decision making in the different stages of the after-sales service management process, and strategies for strengthening the structure and foundations of the framework. A review of the fundamental issues and current research topics in warranty management and after sales services is also provided, which is exemplified by a case study. This book is intended for postgraduates, researchers and engineers who are interested in after sales management, assets engineering and warranty management.
