Professional Clojure Jeremy Anderson,Michael Gaare,Justin Holguín,Nick Bailey,Timothy Pratley,2016-06-07 Clear, practical Clojure for the professional programmer Professional Clojure is the experienced developer's guide to functional programming using the Clojure language. Designed specifically to meet the needs of professional developers, this book briefly introduces functional programming before skipping directly to the heart of using Clojure in a real-world setting. The discussion details the read—eval—print workflow that enables fast feedback loops, then dives into enterprise-level Clojure development with expert guidance on web services, testing, datomics, performance, and more. Read from beginning to end, this book serves as a clear, direct guide to Clojure programming—but the comprehensive coverage and detail makes it extraordinarily useful as a quick reference for mid-project snags. The author team includes four professional Clojure developers, ensuring professional-level instruction from a highly practical perspective. Clojure is an open-source programming language maintained and supported by Cognitect., and quickly gaining use across industries at companies like Amazon, Walmart, Facebook, Netflix, and more. This guide provides a concise, yet thorough resource for professional developers needing to quickly put Clojure to work. Parse the difference between functional and object-oriented programming Understand Clojure performance and capabilities Develop reactive web pages using ClojureScript Adopt an REPL-driven development workflow Clojure is a modern dialect of Lisp, designed for concurrency and Java compatibility. It can be used with the Java virtual machine, Microsoft's Common Language Runtime, and JavaScript engines, providing a level of both versatility and functionality that is appealing to more and more enterprise-level developers. As requirements grow increasingly complex, stepping away from imperative programming can dramatically streamline the development workflow. Professional Clojure provides the expert instruction that gets professionals up to speed and back to work quickly.

While no prior knowledge of Big Data or related technologies is assumed, it will be helpful to have some programming experience.

Apple Macintosh Encyclopedia Gary Phillips,2012-12-06 The Apple Macintosh Encyclopedia provides easily accessible, brief and understandable information on the topics that you are most likely to have questions about. We have carefully digested the manuals, books, magazine articles, and other information sources for the Macintosh. These, combined with our own experience in using the Macintosh and other personal computers, have been integrated into an alphabetical sequence of short entries in the style of an encyclopedia. The goal is to provide concise, useful and easy-to-understand information on a particular topic that is quickly accessible when you need it. Much of the information in the entries is not contained in the manuals provided with the Macintosh and various software products. For example, notice the discussion, under WIDTH, of the deferred nature of this command when used with a device name, the discussion of the colon (:) in Multiplan for ranges, or Saving, Problems With. These topics are omitted or inadequately covered in the standard manuals. The Macintosh is the first truly visual computer. In keeping with the highly visual nature of using the Macintosh, we have provided over 100 illustrations. Each shows exactly what you will see on the screen when exploring topics discussed in the text. The Macintosh Encyclopedia opens with a visual guide to icons, and remains highly visual in orientation throughout the text.

Find Virgil Frank Freudberg,2018-01-13 Martin Muntor has it in for the tobacco industry. He's dying of lung cancer and he's a dangerous man: he's smart and he's mad and he has nothing to lose. Muntor has it in for the tobacco industry. He doesn't give a damn who gets sacrificed as long as he can hurt the billion-dollar profits of Big Tobacco. The twisted journalist's plan is simple. He'll poison cigarettes with cyanide and slip them into convenience stores, restaurants and vending machines all over the U.S. He'll even leave deadly cigarettes in the playground of an elementary school. He knows the inevitable media frenzy will further his cause. But there's a complication: Nicholas Pratt, the CEO of Old Carolina Tobacco, Inc., has a bigger problem. He's trying to cover up his role in the disappearance of a company researcher who was preparing to go to the Department of Justice -- with evidence that Old Carolina was spiking the nicotine level of its cigarettes. Muntor's plot brings an unwanted spotlight to Pratt's illegal activities. Pratt hires an equally self-destructive man, Tommy Rhoads -- a man battling his own gambling and drinking demons. Chasing Muntor changes Rhoads, and as he gets closer to Muntor, he begins to see the madman's logic isn't so insane. Rhoads realizes Muntor kills people with cigarettes the same way tobacco companies do -- only Muntor expedites the process. When Rhoads finally gets Muntor's scent, there's no stopping him. But then there's no stopping Martin Muntor, either.

The COBRAS Synthetic Theater of War Exercise Trial ,1999 This report details the design and development process for the Synthetic Theater of War (STOW) exercise produced in the COBRAS III project. The exercise was to serve as the vehicle for three primary research areas: training support package and resource requirements, technology and infrastructure requirements, and potential for training value. The multiechelon training audience of the Brigade Combat Team included the brigade commander and staff, the commander and staff of one battalion task force (TF), and the line company commanders, first sergeants, fire support team leaders, and scout platoon of that TF. The STOW environment linked constructive simulation (the Brigade/Battalion Battle Simulation BBS and Modular Semi-Automated Forces ModSAF) and virtual simulation (Simulation Networking SIMNET) and reconfigurable simulators). The trial implementation in February - March 1998 involved members of TF 1-101, 3rd Brigade, and 42nd Infantry Division of the New York National Guard, along with supporting participants from the Force XXI Training Program, contracted logistics support (CLS) staffs, and the COBRAS Team. Training support was found to be manageable but resource-intensive. Technology and infrastructure findings were mixed: the systems promise exciting training opportunities, but there were many suggestions for improvement from participants. From the unit members' point of view, the exercise provided valuable training, and there was strong support for continued STOW and reconfigurable simulator development and use.--Stinet.
