### **Advanced Molecular Targets in the Diagnosis and Treatment of Gastrointestinal Cancers** Zsolt

Kovacs, Simona Gurzu, Raluca Ioana Stefan-van Staden, Cornelia Braicu, 2023-06-05 Gastrointestinal cancers are among the most common cancer types, based on the Cancer Genome Atlas. GI cancers are within the most frequent malignancy, with almost 150.000 new cases in 2020. On one hand a big number of researches are focused on the diagnosis, new diagnostic approaches in upper and lower gastrointestinal tract cancers. On the other hand in the last 10 years several papers had been published about the possible therapeutic targets, pointing to precision and personalized medicine.

### **Gastrointestinal Tract Cancer** Martin

Lipkin, 2013-11-11 In observing the development of modern scientific knowledge, many individuals have expressed concern over the rapid growth of information in various specialized disciplines. Over 100 years ago the first Secretary of the Smithsonian Institution, and more recently Dr. Vannevar Bush while proposing the modern expansion of the National Institutes of Health, both noted problems that prevented the proper utilization of

information by individuals in medical and related scientific fields. These observations, together with concomitant implications of future difficulty, are particularly pertinent to the field of oncology. The rapid evolution of the latter discipline has largely been aided by the incorporation of concepts and methods developed over a long period of time, and drawn from a wide variety of other scientific fields. The large body of discoveries that have contributed to our current understanding of neoplasia, however, cannot be viewed as being made up of equal parts. They bring to mind Claude Bernard's view des determinismes simples et complexes in the physiological and biochemical regulation of bodily functions. He was able to observe that the most important and basic of physiologic processes were destined to be fewer in number than those of less fundamental and more highly specialized purpose. He understood that in the future development of medical science, studies of the latter would occupy much of the time and attention of investigators, and were likely to contribute much to scientific literature.

*Allergen Management in the Food Industry* Joyce I. Boye, Samuel Benrejab Godefroy, 2010-10-05 This book comprehensively addresses the sources of allergenic contaminants in foods, their fate during processing, and the specific measures that need to be taken to minimize their occurrence in foods. The book provides up-to-date information on the nine major allergens (as well as other emerging allergens) and practical guidelines on how these allergens can be identified and controlled during production and processing. Starting with an introduction to food allergens, the book follows with sections on food allergen management during production and processing, guidelines for the processing of specific allergen-free foods, techniques for hypo-allergenization and allergen

detection, and allergen-free certification.

Algebraic Geometry For Robotics And Control Theory

Laura Menini,Corrado Possieri,Antonio

Tornambe,2021-09-02 The development of inexpensive and fast computers, coupled with the discovery of efficient algorithms for dealing with polynomial equations, has enabled exciting new applications of algebraic geometry and commutative algebra. Algebraic Geometry for Robotics and Control Theory shows how tools borrowed from these two fields can be efficiently employed to solve relevant problem arising in robotics and control theory.After a brief introduction to various algebraic objects and techniques, the book first covers a wide variety of topics concerning control theory, robotics, and their applications. Specifically this book shows how these computational and theoretical methods can be coupled with classical control techniques to: solve the inverse kinematics of robotic arms; design observers for nonlinear systems; solve systems of polynomial equalities and inequalities; plan the motion of mobile robots; analyze Boolean networks; solve (possibly,

multi-objective) optimization problems; characterize the robustness of linear; time-invariant plants; and certify positivity of polynomials.

**Image Pattern Recognition** Svetlana N. Yanushkevich, Mark S. Nixon, 2007 The field of biometrics utilizes computer models of the physical and behavioral

characteristics of human beings with a view to reliable personal identification. The human characteristics of interest include visual images, speech, and indeed anything which might help to uniquely identify the individual. The other side of the biometrics coin is biometric synthesis OCo rendering biometric phenomena from their corresponding computer models. For example, we could generate a synthetic face from its corresponding computer model. Such a model could include muscular dynamics to model the full gamut of human emotions conveyed by facial expressions. This book is a collection of carefully selected papers presenting the fundamental theory and practice of various aspects of biometric data processing in the context of pattern recognition. The traditional task of biometric technologies OCo human identification by analysis of biometric. data OCo is extended to include the new discipline of biometric synthesis.

**Applied Conjoint Analysis** Vithala R. Rao,2014-02-20

Conjoint analysis is probably the most significant development in marketing research in the past few decades. It can be described as a set of techniques ideally suited to studying customers' decision-making processes and determining tradeoffs. Though this book is oriented towards methods and applications of conjoint analysis in marketing, conjoint methods are also applicable for other business and social sciences. After an introduction to the basic ideas of conjoint analysis the book describes the steps involved in designing a ratings-based conjoint study, it covers various methods for estimating partworth functions from preference ratings data, and dedicates a chapter on methods of design and analysis of conjoint-based choice experiments, where choice is measured directly. Chapter 5 describes several methods for handling

a large number of attributes. Chapters 6 through 8 discuss the use of conjoint analysis for specific applications like product and service design or product line decisions, product positioning and market segmentation decisions, and pricing decisions. Chapter 9 collates miscellaneous applications of marketing mix including marketing resource allocation or store location decisions. Finally, Chapter 10 reviews more recent developments in experimental design and data analysis and presents an assessment of future developments.
