What's Wrong with Climate Politics and How to Fix It Paul G. Harris, 2013-07-11 Governments have failed to stem global emissions of carbon dioxide and other greenhouse gases causing climate change. Indeed, climate-changing pollution is increasing globally, and will do so for decades to come without far more aggressive action. What explains this failure to effectively tackle one of the world's most serious problems? And what can we do about it? To answer these questions, Paul G. Harris looks at climate politics as a doctor might look at a very sick patient. He performs urgent diagnoses and prescribes vital treatments to revive our ailing planet before it's too late. The book begins by diagnosing what's most wrong with climate politics, including the anachronistic international system, which encourages nations to fight for their narrowly perceived interests and makes major cuts in greenhouse pollution extraordinarily difficult; the deadlock between the United States and China, which together produce over one-third of global greenhouse gas pollution but do little more than demand that the other act first; and affluent lifestyles and overconsumption, which are spreading rapidly from industrialized nations to the developing world. The book then prescribes several remedies for the failed politics of climate change, including a new kind of climate diplomacy with people at its center, national policies that put the common but differentiated responsibilities of individuals alongside those of nations, and a campaign for simultaneously enhancing human wellbeing and environmental sustainability. While these treatments are aspirational, they are not intended to be utopian. As Harris shows, they are genuine, workable solutions to what ails the politics of climate change today.

Designing Service Processes to Unlock Value Joy M. Field, 2012-11-05 The service process design landscape is changing, with a much broader range of design options now available. Opportunities for new service design configurations are being supported, to a large extent, by technology-enabled innovations; many tasks previously performed by the service provider may now be performed by either the customer or the service provider. As a result, customers are playing a more active role in the service process not only through self-service but also by providing information to the service provider to create a more personalized service experience. This book explores how service processes can be designed to leverage opportunities for service providers and customers to cocreate value. Inside, you will learn about frameworks for value cocreation and models for designing all types of service processes, as well as the unique challenges of designing knowledge-intensive services. And with the growing involvement of customers in performing service tasks, service process outcomes are increasingly dependent on the capabilities of both service providers and customers. You will learn about real approaches to unlocking these capabilities to further boost value cocreation.

Linked Data in Linguistics Christian Chiarcos, Sebastian Nordhoff, Sebastian Hellmann, 2012-02-21 The explosion of information technology has led to substantial growth of web-accessible linguistic data in terms of quantity, diversity and complexity. These resources become even more useful when interlinked with each other to generate network effects. The general trend of providing data online is thus accompanied by newly developing methodologies to interconnect linguistic data and metadata. This includes linguistic data collections, general-purpose knowledge bases (e.g., the DBpedia, a machine-readable edition of the Wikipedia), and repositories with specific information about languages, linguistic categories and phenomena. The Linked Data paradigm provides a framework for interoperability and access management, and thereby allows to integrate information from such a diverse set of resources. The contributions assembled in this volume illustrate the band-width of applications of the Linked Data paradigm for representative types of language resources. They cover lexical-semantic resources, annotated corpora, typological databases as well as terminology and metadata repositories. The book includes representative applications from diverse fields, ranging from academic linguistics (e.g., typology and corpus linguistics) over applied linguistics (e.g., lexicography and translation studies) to technical applications (in computational linguistics, Natural Language Processing and information technology). This volume accompanies the Workshop on Linked Data in Linguistics 2012 (LDL-2012) in Frankfurt/M., Germany, organized by the Open Linguistics Working Group (OWLG) of the Open Knowledge Foundation (OKFN). It assembles contributions of the workshop participants and, beyond this, it summarizes initial steps in the formation of a Linked Open Data cloud of linguistic resources, the Linguistic Linked Open Data cloud (LLOD).

Designing Service Processes to Unlock Value, Second Edition Joy M. Field, 2016-10-14 The service process design landscape is changing, with many of the previous limitations disappearing on how and by whom services are delivered. Opportunities for new service design configurations are being supported, to a large extent, by technology-enabled innovations; many tasks previously performed by the service provider may now be performed by either the customer or the service provider. As a result, customers are playing a more active role in the service process, not only through self-service but also through providing information to the

service provider to create a more personalized service experience. Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. Readers will learn about frameworks for value Co-Creation and models for designing all types of service processes, as well as the unique challenges of designing knowledge-intensive services. The book concludes with approaches to unlock these capabilities-and further boost value Co-Creation. This second edition includes new and updated examples of technology-enabled innovations that provide unprecedented flexibility in service process design and continue to transform how service providers and customers co-produce services. At the same time, readers will see how these innovations can have important-and sometimes surprising-impacts on the nature of the benefit and cost tradeoffs and synergies that determine value Co-Creation.

Crashing the Party Kris Hermes,2015-09-01 Over the past fifteen years, people in the United States—and dissidents in particular—have witnessed a steady escalation of the National Security State, including invasive surveillance and infiltration, indiscriminate police violence, and unlawful arrests. These concerted efforts to spy on Americans and undermine meaningful social change are greatly enhanced by the coordination of numerous local, state, and federal agencies often operating at the behest of private corporations. Normally associated with the realities of a post-9/11 world, *Crashing the Party* shows how these developments were already being set in motion during the Republican National Convention (RNC) protests in 2000. It also documents how, in response, dissidents confronted new forms of political repression by pushing legal boundaries and establishing new models of collective resistance. *Crashing the Party* explains how the events of 2000 acted as a testing ground in which Philadelphia Police Commissioner John Timoney was able to develop repressive methods of policing that have been used extensively across the U.S. ever since. At the same time, these events also provided a laboratory for the radical, innovative, and confrontational forms of legal support carried out by R2K Legal, a defendant-led collective that raised unprecedented amounts of money for legal defense, used a unique form of court solidarity to overcome hundreds of serious charges, and implemented a PR campaign that turned the tide of public opinion in favor of dissidents. While much has been written about the global-justice era of struggle, little attention has been paid to the legal struggles of the period or the renewed use of solidarity tactics in jail and the courtroom that made them possible. By analyzing the successes and failures of these tactics, *Crashing the Party* offers rare insight into the mechanics and concrete effects of such resistance. In this way, it is an invaluable resource for those seeking to confront today’s renewed counterintelligence tactics.

Textiles in Ancient Mediterranean Iconography Susanna Harris,Cecilie Brøns,Marta Zuchowska,2022-02-03 This volume provides an ambitious synopsis of the complex, colourful world of textiles in ancient Mediterranean iconography. A wealth of information on ancient textiles is available from depictions such as sculpture, vase painting, figurines, reliefs and mosaics. Commonly represented in clothing, textiles are also present in furnishings and through the processes of textile production. The challenge for anyone analysing ancient iconography is determining how we interpret what we see. As preserved textiles rarely survive in comparable forms, we must consider the extent to which representations of textiles reflect reality, and critically evaluate the sources. Images are not simple replicas or photographs of reality. Instead, iconography draws on select elements from the surrounding world that were recognisable to the ancient audience, and reveal the perceptions, ideologies, and ideas of the society in which they were produced. Through examining the durable evidence, this anthology reveals the ephemeral world of textiles and their integral role in the daily life, cult and economy of the ancient Mediterranean.

Contracts for Engineers Robert D. Hunter,2017-12-19 Engineers encounter different types of contracts at nearly every turn in their careers. *Contracts for Engineers: Intellectual Property, Standards, and Ethics* is a tool to enhance their ability to communicate contractual issues to lawyers—and then better understand the legal advice they receive. Building on its exploration of contracts, this book expands discussion to: Patents, copyrights, trademarks, trade secrets, and other intellectual property issues Development of standards and the bodies that govern them, as well as conformity assessment and accreditation Ethics at both the micro and macro levels—a concept under major scrutiny after several major disasters, including the Gulf of Mexico oil spill, the collapse of Boston’s Big Dig, and a coal-mining accident that resulted in many deaths With a brief introduction to common law contracts and their underlying principles, including basic examples, the book presents a sample of the Uniform Commercial Code (UCC) regarding the sale of goods. It evaluates elements of the different contracts that engineers commonly encounter, such as employee and associated consulting agreements and contracts involved in construction and government. Approaching intellectual property from a contract perspective, this reference focuses on the many different types of patents and their role in commerce. It touches on the application of trademarks and recent developments in the use of copyright as a form of contract and explains the process of obtaining patents, including the rationale for investing in them. Ethical standards receive special attention, which includes a review of several prominent professional codes of ethics and conduct for both organizations and individual engineers, particularly officers and higher-level managers.

The New York Nobody Knows William B. Helmreich,2015-08-25 As a kid growing up in Manhattan, William Helmreich played a game with his father they called Last Stop. They would pick a subway line and ride it to its final destination, and explore the neighborhood there. Decades later, Helmreich teaches university courses about New York, and his love for exploring the city is as strong as ever. Putting his feet to the test, he decided that the only way to truly understand New York was to walk virtually every block of all five boroughs--an astonishing 6,000 miles. His epic journey lasted four years and took him to every corner of Manhattan, Brooklyn, Queens, the Bronx, and Staten Island. Helmreich spoke with hundreds of New Yorkers from every part of the globe and from every walk of life, including Mayor Michael Bloomberg and former mayors Rudolph Giuliani, David Dinkins, and Edward Koch. Their stories and his are the subject of this captivating and highly original book. We meet the Guyanese immigrant who grows beautiful flowers outside his modest Queens residence in order to always remember the homeland he left behind, the Brooklyn-raised grandchild of Italian immigrants who illuminates a window of his brownstone with the family's old neon grocery-store sign, and many, many others. Helmreich draws on firsthand insights to examine essential aspects of urban social life such as ethnicity, gentrification, and the use of space. He finds that to be a New Yorker is to struggle to understand the place and to make a life that is as highly local as it is dynamically cosmopolitan.--Publisher's description.
