Good Night Zoo Adam Gamble, 2011-11-14 One of the first books in the Good Night series to focus on a general environment rather than a specific geographic location, this vividly illustrated board book follows a multicultural group of people during a trip to the zoo. Designed to soothe children before bedtime with rhythmic language while instilling an early appreciation for the wonders of the natural world, this book features adults and children experiencing all that the zoo has to offer while guiding readers through both the passage of a single day and the four seasons.

*An Introduction to Zoo Biology and Management* Paul A. Rees, 2011-05-06 This book is intended as an introductory text for students studying a wide range of courses concerned with animal

management, zoo biology and wildlife conservation, and should also be useful to zookeepers and other zoo professionals. It is divided into three parts. Part 1 considers the function of zoos, their history, how zoos are managed, ethics, zoo legislation and wildlife conservation law. Part 2 discusses the design of zoos and zoo exhibits, animal nutrition, reproduction, animal behaviour (including enrichment and training), animal welfare, veterinary care, animal handling and transportation. Finally, Part 3 discusses captive breeding programmes, genetics, population biology, record keeping, and the educational role of zoos, including a consideration of visitor behaviour. It concludes with a discussion of the role of zoos in the conservation of species in the wild and in species reintroductions. This book takes an international perspective and includes a wide range of examples of the operation of zoos and breeding programmes particularly in the UK, Europe, North America and Australasia. ### Conservation and the Use of Wildlife Resources Melvin

Bolton, 2012-12-06 Not everybody cares about the fate of wild animals or the state of the natural environment. I met a lady who said it wouldn't worry her if all the wild animals in the world disappeared overnight. She was a city person~ she said. There are also people who would prefer to let animals become extinct than to have them kept in captivity - no matter how progressive the zoo. There are those who, on principle, will not eat meat, let alone do the killing, and there are those who enjoy nothing so much as shooting birds. People in the last two camps may oppose each other in claiming to be conservationists. Extremists are unlikely to find their opinions being reversed by this book but, because of the scope of the subject, I believe there is a good chance that anybody with an interest in wildlife will find in it something new to think about. It may not be too much to hope that a few disagreements might also be settled because I suspect there is more common ground than is generally realized among those with opposing views.

### **The State of the World's Biodiversity for Food and Agriculture**

Food and Agriculture Organization of the United

Nations, 2019-03-12 The State of the World's Biodiversity for Food and Agriculture presents the first global assessment of biodiversity for food and agriculture worldwide. Biodiversity for food and agriculture is the diversity of plants, animals and micro-organisms at genetic, species and ecosystem levels, present in and around crop, livestock, forest and aquatic production systems. It is essential to the structure, functions and processes of these systems, to livelihoods and food security, and to the supply of a wide range of ecosystem services. It has been managed or influenced by farmers, livestock keepers, forest dwellers, fish farmers and fisherfolk for hundreds of generations. Prepared through a participatory, country-driven process, the report draws on information from 91 country reports to provide a description of the roles and importance of biodiversity for food and agriculture, the drivers of change affecting it and its current status and trends. It describes the state of efforts to promote the sustainable use and conservation of biodiversity for food and agriculture, including through the development of supporting policies, legal frameworks, institutions and capacities. It concludes with a discussion of needs and challenges in the future management of biodiversity for food

and agriculture. The report complements other global assessments prepared under the auspices of the Commission on Genetic Resources for Food and Agriculture, which have focused on the state of genetic resources within particular sectors of food and agriculture.
