Marine Conservation and International Law Sarah Louise Lothian,2022-07-22 This book provides a blueprint for an International Legally Binding Instrument (ILBI) for the conservation and sustainable use of marine biodiversity beyond national jurisdiction (BBNJ). The development of an ILBI could signify a pivotal turning point in the law of the sea by addressing regulatory, governance and institutional gaps and deficiencies in the existing international law framework for BBNJ. This book analyses the essential components an ILBI will require to effectively conserve and sustainably use BBNJ, focusing on marine genetic resources, areabased management tools, environmental impact assessments, capacity-building and marine technology transfer. It investigates potential areas of compromise, as the success of an ILBI will rely upon the support of a powerful bloc of maritime States, principally the United States, the United Kingdom, Russia, the Netherlands, France and Japan. The participation of major maritime powers will be critical as it is their nationals, corporations and flag vessels that have the financial and technical wherewithal to undertake activities beyond national jurisdiction. This bloc of States has historically been the strongest proponent of the Grotian doctrine of 'freedom of the seas' as it aligns with their predominant interest to preserve navigational freedom for their merchant and military fleets. Accordingly, this book assesses the extent to which the Grotian doctrine continues to exert influence on the development of the law of the sea and the development of an ILBI. Providing a comprehensive overview of this important development in international law, this book will be of interest to students, lecturers and academics of law of the sea, international environmental law and biodiversity law.

Importance of Microbiology Teaching and Microbial Resource Management for Sustainable Futures Ipek Kurtboke,2022-04-14 Importance of Microbiology Teaching and Microbial Resource Management for Sustainable Futures brings experts together to highlight the importance of microbiology-discipline-based teaching with its unique skills-based approaches. The book discusses how microscope microbiology has received significant attention since microorganisms played a significant role in the advancement, as well as destruction of, mankind during incidences such as the black death. With the discovery of penicillin from a fungal culture, the beneficial role of microorganisms has been a major catalyst in the progress of biological sciences. Interestingly, there are fundamental aspects of microbiology that did not change since revelations of their identity dating back to the Pasteur era. This book details the progress made and milestones that have been set in the science. Emphasizes traditional and discipline-based teaching with a focus on microbiology Combines pedagogy and the challenges faced in the post-genomic era Provides examples from various parts of the world, including from the Pasteur Institute

**Air Pollution** Pallavi Saxena,Vaishali Naik,2018-12-19 Air pollution has become a major global issue due to rapid industrialization, human population growth and increasing urbanization. The various sources of atmospheric pollutants, both those created by human activity and those from natural physical and biological processes, have become the focus of much scientific research and analysis. An understanding of how these many pollutants are affecting air quality is essential in order to design strategies to mitigate them. Written by a team of international experts, this book aims to provide a broad overview of the issues surrounding air pollution and how to control and monitor pollution levels. Beginning with a brief background on the subject, the book moves on to discuss global emissions, with an emphasis on megacities and their effects. Possible pollution control measures and methods of air pollution measurement and modelling are also explored. The book ends with descriptions of the various indices used for assessing air quality with a focus on human health impacts, and a discussion on policy making to control air pollution. The book will be useful to students of environmental science and atmospheric science, as well as environmental consultants and researchers interested in air quality . Key Features: Comprehensive introduction to the primary causes of air pollution today with an emphasis on growing urban populations and megacities Discusses both anthropogenic and biogenic emissions and their effects on human health and the environment Gives an overview of indices used today for assessing air quality and

describes current methods for air pollution monitoring and modelling Discusses new technologies for mitigating the effects of air pollution and policy making for implementation of controls

**Trends in the Systematics of Bacteria and Fungi** Paul Bridge,David Smith,Erko Stackebrandt,2020-12-09 Methods in microbial systematics have developed and changed significantly in the last 40 years. This has resulted in considerable change in both the defining microbial species and the methods required to make reliable identifications. Developments in information technology have enabled ready access to vast amounts of new and historic data online. Establishing both the relevance, and the most appropriate use, of this data is now a major consideration when undertaking identifications and systematic research. This book provides some insights into how current methods and resources are being used in microbial systematics, together with some thoughts and suggestions as to how both methodologies and concepts may develop in the future.

Cunningham,Paul Mann,2007 This volume addresses the tectonic complexity and diversity of strike-slip restraining and releasing bends with 18 contributions divided into four thematic sections: a topical review of fault bends and their global distribution; bends, sedimentary basins and earthquake hazards; restraining bends, transpressional deformation and basement controls on development; releasing bends, transtensional deformation and fluid flow.

**Bioaerosols Emission from Anthropogenic Sources** Nitin Kumar Singh,Gaurav Sanghvi,Manish Yadav,2023-09-14 Bioaerosols Emission from Anthropogenic Sources: Influencing Factors, Microbial Diversity, Epidemiological Threats, and Control Approaches covers various sources of biohazards and their associated risk factors. These air contaminants are developing concerns to people and the environment and must be addressed to avert future dangers. As little is known about their precise sources, controlling variables, microbial diversity, the involvement of co-pollutants, and dispersion and control methods, this book will assist stakeholders, including the public, government officials, and policymakers in developing successful strategies for ensuring society's safety. Identifies potential emission stages at different anthropogenic sources of bioaerosols Discusses characteristics, fate and development of effective control strategies for minimizing exposure to site specific bioaerosols Presents cleaner production and sustainable development tactics of bioaerosols

**Information Structure in a Cross-Linguistic Perspective** ,2016-08-29 The present volume draws together contributions from a number of scholars with an interest in empirical, cross-linguistic description. Most of the papers were first presented at the symposium Information Structure in a Cross-linguistic Perspective held in Oslo in November/December 2000. The descriptions are functionally oriented, and their common focus is how information structure – in a broad sense – can be compared across languages. 'Information structure' has been approached in a variety of ways by the authors, so as to give a broad picture of this fundamental principle of text production, involving the way in which a speaker/writer chooses to present a message in terms of given/new information, focus, cohesion, and point of view. Central to much of the research is the problem of establishing criteria for isolating linguistic constraints on language use from cultural-linguistic conventions in text production. The linguistic comparison includes English, German and/or one of the Scandinavian languages, with sidelights to other languages. Most of the papers are text- or corpus-based, and the ongoing work on parallel corpora in Scandinavia is reflected in several contributions.

**The Evolving Continents** Timothy M. Kusky,Mingguo Zhai,Wenjiao Xiao,2010 This volume honours the career of Brian F. Windley, who has been hugely influential in helping to achieve our current understanding of the evolution of the continental crust, and who has inspired many students and scientists to pursue studies on the evolution of the continents. Brian has studied processes of continental formation and evolution on most continents and of all ages, and has educated and inspired two generations of geologists to undertake careers in studies of continental evolution. The volume is organized into six sections, including: oceanic and island arc systems and continental growth; tectonics of accretionary orogens and continental growth; growth and stabilization of continental crust; collisions and intraplate processes; Precambrian tectonics and the birth of continents; and active tectonics and geomorphology of continental collision and growth zones.
