GOLD MINING "PICKIN and GRINNIN" TOM LEFTWICH,2011-10-23 An autobiographical account that deal's with the fun side of Gold Mining starring the character's, the wild stories, the drama, the humor, the rewards and the failures. I've put it all in song and verse of country music for the enjoyment of all who participate in gold mining or dream of the opportunity to do a little panning somewhere down the road. Come along for the laugh's! There may not be any gold! Sometimes, if it comes from a gold miner it's probably all 24 carat anyway !----- Fun, that is!!! Beware of the sworn On My Mother's Gravetruth, the half truth and the downright lie because it is all typical of a gold camp! I don't think some of these Gold Miners had a Mother! If you long to be a Real Gold Miner then read this whole account slow, very carefully, and pay real close attention because: --- There may be a Little truth in it!!! How much gold mining equipment can a man have before his wife throws him out? Well, I don't know for sure; but I'm afraid that I'm getting close to finding out!,

Early Wynn, the Go-Go White Sox and the 1959 World Series Lew Freedman,2014-11-01 This is the story of how the hapless Chicago White Sox, badly hurt by the banning of players after the 1919 Black Sox Scandal, floundered until the 1950s when they were finally rebuilt and had their first success in 40 years. The culminating event was the capture of the 1959 American League pennant, made possible by aging pitcher Early Wynn. Wynn, nearly 40, was the best pitcher in the game that season, winning 22 games and the Cy Young Award. He was the last piece in the puzzle that put the Sox over the top and, in addition to the team's historic season, the book tracks his life before, during and after baseball.

Gold Mining in the Pit of Sorrow William W. Gaskill,2010-05 Gold Mining in the Pit of Sorrow is a chronicle of grief and healing following the loss of a child. Mr. Gaskill shares openly and honestly about his struggles at the loss of his youngest son. It is a record of a journey of faith wrestling with doubt, of comfort in the midst of incredible sorrow, and of healing through the power and kindness of God toward the broken hearted. It is the author's prayer that this volume will be a source of understanding and comfort to those who have lost a child and to those who would support them. If you are a friend to someone who has lost a child and you have been searching for something to hand them which will help, even if just a little, this may be the book for you to give. The author found that in the aftermath of his own son's death, it was the more intense literature in the field of death, dying, and grief that carried the most healing. This book makes no attempt to sugar coat this experience, so please ask for wisdom before you give this to a bereaved person. William Gaskill was ordained as a pastor in the Presbyterian Church USA in 1978. He received his Master of Divinity from Princeton Theological Seminary in Princeton, New Jersey. In 1994, he received his Doctor of Ministry from Columbia Theological Seminary in Decatur, Georgia. He continues to serve as pastor at First Presbyterian Church in Merchantville, New Jersey. Mr. Gaskill continues to share his life with his wife Jean. Together they have three children, Mark, Julia, and Jonathan, whose death at age 24 has inspired the writing of this volume. Those wishing to contact Rev. Gaskill may do so through his congregation's website at FPCmerchantville.com.

Graph-Theoretic Techniques for Web Content Mining Adam Schenker,Abraham Kandel,Horst Bunke,Mark Last,2005-05-31 This book describes exciting new opportunities for utilizing robust graph representations of data with common machine learning algorithms. Graphs can model additional information which is often not present in commonly used data representations, such as vectors. Through the use of graph distance — a relatively new approach for determining graph similarity — the authors show how well-known algorithms, such as k-means clustering and k-nearest neighbors classification, can be easily extended to work with graphs instead of vectors. This allows for the utilization of additional information found in graph representations, while at the same time employing well-known, proven algorithms. To demonstrate and investigate these novel techniques, the authors have selected the domain of web content mining, which involves the clustering and classification of web documents based on their textual substance. Several methods of representing web document content by graphs are introduced; an interesting feature of these representations is that they allow for a polynomial time distance computation, something which is typically an NP-complete problem when using graphs. Experimental results are reported for both clustering and classification in three web document collections using a variety of graph representations, distance measures, and algorithm parameters. In addition, this book describes several other related topics, many of which provide excellent starting points for researchers and students interested in exploring this new area of machine learning further. These topics include creating graph-based multiple classifier ensembles through random node selection and visualization of graph-based data using multidimensional scaling. Contents:Introduction to Web MiningGraph Similarity TechniquesGraph Models for Web DocumentsGraph-Based ClusteringGraph-Based ClassificationThe Graph Hierarchy Construction Algorithm for Web Search Clustering Readership: Researchers and graduate students who are interested in computer science, specifically machine learning. Also of interest to researchers in academia or industry in disciplines such as information science or information technology who are interested in text and web documents. The State, Popular Mobilisation and Gold Mining in Mongolia Dulam Bumochir,2020-03-31 Mongolia's mining sector, along with its environmental and social costs, have been the subject of prolonged and heated debate. This debate has often cast the country as either a victim of the 'resource curse' or guilty of 'resource nationalism'. In The State, Popular Mobilisation and Gold Mining in Mongolia, Dulam Bumochir aims to avoid the pitfalls of this debate by adopting an alternative theoretical approach. He focuses on the indigenous representations of nature, environment, economy, state and sovereignty that have triggered nationalist and statist responses to the mining boom. In doing so, he explores the ways in which these responses have shaped the apparently 'neo-liberal' policies of twenty-first century Mongolia, and the economy that has emerged from them, in the face of competing mining companies, protest movements, international donor organizations, economic downturn, and local and central government policies.

Data Mining and Learning Analytics Samira ElAtia,Donald Ipperciel,Osmar R. Zaïane,2016-09-26 Addresses the impacts of data mining on education and reviews applications in educational research teaching, and learning This book discusses the insights, challenges, issues, expectations, and practical implementation of data mining (DM) within educational mandates. Initial series of chapters offer a general overview of DM, Learning Analytics (LA), and data collection models in the context of educational research, while also defining and discussing data

mining's four guiding principles— prediction, clustering, rule association, and outlier detection. The next series of chapters showcase the pedagogical applications of Educational Data Mining (EDM) and feature case studies drawn from Business, Humanities, Health Sciences, Linguistics, and Physical Sciences education that serve to highlight the successes and some of the limitations of data mining research applications in educational settings. The remaining chapters focus exclusively on EDM's emerging role in helping to advance educational research—from identifying at-risk students and closing socioeconomic gaps in achievement to aiding in teacher evaluation and facilitating peer conferencing. This book features contributions from international experts in a variety of fields. Includes case studies where data mining techniques have been effectively applied to advance teaching and learning Addresses applications of data mining in educational research, including: social networking and education; policy and legislation in the classroom; and identification of at-risk students Explores Massive Open Online Courses (MOOCs) to study the effectiveness of online networks in promoting learning and understanding the communication patterns among users and students Features supplementary resources including a primer on foundational aspects of educational mining and learning analytics Data Mining and Learning Analytics: Applications in Educational Research is written for both scientists in EDM and educators interested in using and integrating DM and LA to improve education and advance educational research.

This book, a pioneer in comparing the two countries' practices side-by-side, does just that.Tao Zhang and Jingui Fang, respectively from Huawei Device USA and Huawei Technologies in China (2015's top PCT applicant according to WIPO, with 3,898 published patent applications), provide readers with first-hand guidance from invention conception to IP monetization, with a consistent emphasis on quality. Written such that readers can delve straight into any area of the IP cycle that interests them, the book also contains useful checklists that highlight best practices and key lessons learned.Whether you are an individual wanting to improve a product or process, a patent drafter needing to provide client satisfactory results, a patent asset manager desiring to create a bullet proof portfolio, or an IP business executive wishing to deliver much needed financial results to your company's bottom line, this book, with its comparative approach, is an essential read — filled with tips and information to help you create high quality patents.

Mining Latent Entity Structures Chi Wang,Jiawei Han,2015-03-01 The big data era is characterized by an explosion of information in the form of digital data collections, ranging from scientific knowledge, to social media, news, and everyone's daily life. Examples of such collections include scientific publications, enterprise logs, news articles, social media, and general web pages. Valuable knowledge about multi-typed entities is often hidden in the unstructured or loosely structured, interconnected data. Mining latent structures around entities uncovers hidden knowledge such as implicit topics, phrases, entity roles and relationships. In this monograph, we investigate the principles and methodologies of mining latent entity structures from massive unstructured and interconnected data. We propose a text-rich information network model for modeling data in many different domains. This leads to a series of new principles and powerful methodologies for mining latent structures, including (1) latent topical hierarchy, (2) quality topical phrases, (3) entity roles in hierarchical topical communities, and (4) entity relations. This book also introduces applications enabled by the mined structures and points out some promising research directions.
