*The Little Gold Miners of the Sierras and Other Stories* Joaquin Miller, 2019-12-05 This book is an anthology of short stories from various genres. Included titles are 'A Modern Hero' by Marion Harland; 'Benny's Wigwam' by Mary Catherine Lee; 'The Button Boy' by A. M. Griffin; and 'His Three Trials' by Kate Gannett Wells.

**GOLD MINING "PICKIN and GRINNIN"** TOM LEFTWICH, 2011-10-23 An autobiographical account that deal's with the fun side of Gold Mining starring the character's, the wild stories, the drama, the humor, the rewards and the failures. I've put it all in song and verse of country music for the enjoyment of all who participate in gold mining or dream of the opportunity to do a little panning somewhere down the road. Come along for the laugh's! There may not be any gold! Sometimes, if it comes from a gold miner it's probably all 24 carat anyway !----- Fun, that is!!! Beware of the sworn On My Mother's Gravetruth, the half truth and the downright lie because it is all typical of a gold camp! I don't think some of these Gold Miners had a Mother! If you long to be a Real Gold Miner then read this whole account slow, very carefully, and pay real close attention because: --- There may be a Little truth in it!!! How much gold mining equipment can a man have before his wife throws him out? Well, I don't know for sure; but I'm afraid that I'm getting close to finding out!,

**Graph-Theoretic Techniques for Web Content Mining** Adam Schenker, Abraham Kandel, Horst Bunke, Mark Last, 2005-05-31 This book describes exciting new opportunities for utilizing robust graph representations of data with common machine learning algorithms. Graphs can model additional information which is often not present in commonly used data representations, such as vectors. Through the use of graph distance — a relatively new approach for determining graph similarity — the authors show how well-known algorithms, such as k-means clustering and k-nearest neighbors classification, can be easily extended to work with graphs instead of vectors. This allows for the utilization of additional information found in graph representations, while at the same time employing well-known, proven algorithms. To demonstrate and investigate these novel techniques, the authors have selected the domain of web content mining, which involves the clustering and classification of web documents based on their textual substance. Several methods of representing web document content by graphs are introduced; an interesting feature of these representations is that they allow for a polynomial time distance computation, something which is typically an NP-complete problem when using graphs. Experimental results are reported for both clustering and classification in three web document collections using a variety of graph representations, distance measures, and algorithm parameters. In addition, this book describes several other related topics, many of which provide excellent starting points for researchers and students interested in exploring this new area of machine learning further. These topics include creating graph-based multiple classifier ensembles through random node selection and visualization of graph-based data using multidimensional scaling. Contents: Introduction to Web Mining Graph Similarity Techniques Graph Models for Web Documents Graph-Based Clustering Graph-Based Classification The Graph Hierarchy Construction Algorithm for Web Search Clustering Readership: Researchers and graduate students who are interested in computer science, specifically machine learning. Also of interest to researchers in academia or industry in disciplines such as information science or information technology who are interested in text and web documents. Keywords: Graph; Machine Learning; Web Mining; Data Mining; Clustering; Classification; Graph Distance; Maximum Common Subgraph Key Features: Opens up exciting new possibilities for utilizing graphs in common machine learning algorithms Presents experimental results comparing differing graph representations and graph distance measures Provides a review of graph-theoretic similarity techniques

**Gold Mining in the Pit of Sorrow** William W. Gaskill,2010-05 Gold Mining in the Pit of Sorrow is a chronicle of grief and healing following the loss of a child. Mr. Gaskill shares openly and honestly about his struggles at the loss of his youngest son. It is a record of a journey of faith wrestling with doubt, of comfort in the midst of incredible sorrow, and of healing through the power and kindness of God toward the broken hearted. It is the author's prayer that this volume will be a source of understanding and comfort to those who have lost a child and to those who would support them. If you are a friend to someone who has lost a child and you have been searching for something to hand them which will help, even if just a little, this may be the book for you to give. The author found that in the aftermath of his own son's death, it was the more intense literature in the field of death, dying, and grief that carried the most healing. This book makes no attempt to sugar coat this experience, so please ask for wisdom before you give this to a bereaved person. William Gaskill was ordained as a pastor in the Presbyterian Church USA in 1978. He received his Master of Divinity from Princeton Theological Seminary in Princeton, New Jersey. In 1994, he received his Doctor of Ministry from Columbia Theological Seminary in Decatur, Georgia. He continues to serve as pastor at First Presbyterian Church in Merchantville, New Jersey. Mr. Gaskill continues to share his life with his wife Jean. Together they have three children, Mark, Julia, and Jonathan, whose death at age 24 has inspired the writing of this volume. Those wishing to contact Rev. Gaskill may do so through his congregation's website at [FPCmerchantville.com](http://FPCmerchantville.com).

**Data Mining and Learning Analytics** Samira ElAtia,Donald Ipperciel,Osmar R. Zaiane,2016-09-26 Addresses the impacts of data mining on education and reviews applications in educational research teaching, and learning This book discusses the insights, challenges, issues, expectations, and practical implementation of data mining (DM) within educational mandates. Initial series of chapters offer a general overview of DM, Learning Analytics (LA), and data collection models in the context of educational research, while also defining and discussing data mining's four guiding principles— prediction, clustering, rule association, and outlier detection. The next series of chapters showcase the pedagogical applications of Educational Data Mining (EDM) and feature case studies drawn from Business, Humanities, Health Sciences, Linguistics, and Physical Sciences education that serve to highlight the successes and some of the limitations of data mining research applications in educational settings. The remaining chapters focus exclusively on EDM's emerging role in helping to advance educational research—from identifying at-risk students and closing socioeconomic gaps in achievement to aiding in teacher evaluation and facilitating peer conferencing. This book features contributions from international experts in a variety of fields. Includes case studies where data mining techniques have been effectively applied to advance teaching and learning Addresses applications of data mining in educational research, including: social networking and education; policy and legislation in the classroom; and identification of at-risk students Explores Massive Open Online Courses (MOOCs) to study the effectiveness of online networks in promoting learning and understanding the communication patterns among users and students Features supplementary resources including a primer on foundational aspects of educational mining and learning analytics Data Mining and Learning Analytics: Applications in Educational Research is written for both scientists in EDM and educators interested in using and integrating DM and LA to improve education and advance educational research.

**The State, Popular Mobilisation and Gold Mining in Mongolia** Dulam Bumochir, 2020-03-31 Mongolia's mining sector, along with its environmental and social costs, have been the subject of prolonged and heated debate. This debate has often cast the country as either a victim of the 'resource curse' or guilty of 'resource nationalism'. In *The State, Popular Mobilisation and Gold Mining in Mongolia*, Dulam Bumochir aims to avoid the pitfalls of this debate by adopting an alternative theoretical approach. He focuses on the indigenous representations of nature, environment, economy, state and sovereignty that have triggered nationalist and statist responses to the mining boom. In doing so, he explores the ways in which these responses have shaped the apparently 'neo-liberal' policies of twenty-first century Mongolia, and the economy that has emerged from them, in the face of competing mining companies, protest movements, international donor organizations, economic downturn, and local and central government policies.

*Mining Ideas For Diamonds: Comparing China And Us Ip Practices From Invention Selection To Patent Monetization* Tao Zhang, Jingui Fang, 2016-09-20 In 2015, China and the U.S. were among the top three countries in terms of the number of international PCT (Patent Cooperation Treaty) patents filed, together making up 40% of the global share, reported the World Intellectual Property Organization (WIPO). Not surprisingly, there is a huge international desire within the business, legal and technical communities to better understand the Intellectual Property (IP) practices of these two giants in the industry. This book, a pioneer in comparing the two countries' practices side-by-side, does just that. Tao Zhang and Jingui Fang, respectively from Huawei Device USA and Huawei Technologies in China (2015's top PCT applicant according to WIPO, with 3,898 published patent applications), provide readers with first-hand guidance from invention conception to IP monetization, with a consistent emphasis on quality. Written such that readers can delve straight into any area of the IP cycle that interests them, the book also contains useful checklists that highlight best practices and key lessons learned. Whether you are an individual wanting to improve a product or process, a patent drafter needing to provide client satisfactory results, a patent asset manager desiring to create a bullet proof portfolio, or an IP business executive wishing to deliver much needed financial results to your company's bottom line, this book, with its comparative approach, is an essential read — filled with tips and information to help you create high quality patents.

*Advances in Knowledge Discovery and Data Mining* Jinho Kim, Kyuseok Shim, Longbing Cao, Jae-Gil Lee, Xuemin Lin, Yang-Sae Moon, 2017-04-25 This two-volume set, LNAI 10234 and 10235, constitutes the thoroughly refereed proceedings of the 21st Pacific-Asia Conference on Advances in Knowledge Discovery and Data Mining, PAKDD 2017, held in Jeju, South Korea, in May 2017. The 129 full papers were carefully reviewed and selected from 458 submissions. They are organized in topical sections named: classification and deep learning; social network and graph mining; privacy-preserving mining and security/risk applications; spatio-temporal and sequential data mining; clustering and anomaly detection; recommender system; feature selection; text and opinion mining; clustering and matrix factorization; dynamic, stream data mining; novel models and algorithms; behavioral data mining; graph clustering and community detection; dimensionality reduction.

*Rough Sets, Fuzzy Sets, Data Mining and Granular Computing* Aijun An, Jerzy Stefanowski, Sheela Ramanna, Cory Butz, Witold Pedrycz, 2007-08-22 This book constitutes the refereed proceedings of the 11th International Conference on Rough Sets, Fuzzy Sets, Data Mining, and Granular Computing, RSFDGrC 2007, held in Toronto, Canada in May 2007 in conjunction with the Second International Conference on Rough Sets and Knowledge Technology, RSKT 2007, both as part of the Joint Rough Set Symposium, JRS 2007.

*A Gold Hunter's Experience* Chalkley J. Hambleton, 2017-06-22 A Gold Hunter's Experience Early in the summer of 1860 I had a bad attack of gold fever. In Chicago the conditions for such a malady were all favorable. Since the panic of 1857 there had been three years of general depression, money was scarce, there was little activity in business, the outlook was discouraging, and I, like hundreds of others, felt blue. Gold had been discovered in the fall of 1858 in the vicinity of Pike's Peak, by a party of Georgian prospectors, and for several years afterward the whole gold region for seventy miles to

the north was called Pike's Peak. Others in the East heard of the gold discoveries and went West the next spring; so that during the summer of 1859 a great deal of prospecting was done in the mountains as far north as Denver and Boulder Creek. Those who returned in the autumn of that year, having perhaps claims and mines to sell, told large stories of their rich finds, which grew larger as they were repeated, amplified and circulated by those who dealt in mining outfits and mills. Then these accounts were fed out to the public daily in an appetizing way by the newspapers. The result was that by the next spring the epidemic became as prevalent in Chicago as cholera was a few years later. Four of the fever stricken ones, Enos Ayres, T. R. Stubbs, John Sollitt and myself, formed a partnership, raised about \$9,000 and went to work to purchase the necessary outfit for gold mining. Mr. Ayres furnished a larger share of the capital than any of the others and was not to go with the expedition, but might join us the following year. Mr. Stubbs and I were both to go, while Mr. Sollitt was to be represented by a substitute, a relative whose name was also John Sollitt, and who had been a farmer and butcher and was supposed to know all about oxen. Mr. Stubbs was a good mechanic, an intelligent, well-read man, and ten years before had been to California in search of gold. Our outfit consisted of a 12-stamp quartz mill with engine and boiler, and all the equipments understood to be necessary for extracting gold from the rock, including mining tools, powder, quicksilver, copper plate and chemicals; also a supply of provisions for a year. The staple articles of the latter were flour, beans, salt pork, coffee and sugar. Then we had rice, cornmeal, dried fruit, tea, bacon and a barrel of syrup; besides a good supply of hardtack, crackers and cheese for use while crossing the plains, when a fire for cooking might not be found practicable. These things were all purchased in Chicago, together with the fourteen wagons necessary to carry them across the plains. Then all were shipped by rail to St. Joseph, Mo., where the oxen were to be purchased. The entire outfit when loaded on the cars, weighed twenty-four tons. I stayed in Chicago till the last to help purchase and forward the outfit and supplies, while Stubbs and Sollitt (the substitute) went to St. Joe to receive and load them on the wagons and to purchase the oxen. On the 1st day of August, all was ready, and we ferried our loaded wagons and teams across the Missouri River into Kansas to make a final start next morning into regions to us unknown. Stubbs started the same day by stage for the mountains, to prospect and look out for a favorable location and then to meet the train when it arrived at Denver. Sollitt was to be trainmaster, which involved the oversight and direction of the teams and drivers, and the duty of frequently going ahead to pick out the best road and select a favorable place to camp at night, where water and grass could be had. I was the general business man of the expedition, had full power of attorney from Mr. Ayres to represent and manage his interest, and hence I had the control and responsibility in my hands and practically decided all important questions relating to the business....
