Bringing Out Their Best Norma J. Livo,2003-04-30 Here are more than 60 tales that exemplify, support, and promote the strong values and character traits that we wish to instill in our youth today. They also support the character education that is being mandated in state after state throughout the country. Grouped into 12 sections based on specific values, such as love, perseverance, fairness, and cooperation (with a separate chapter on dealing with bullies), these tales have been passed down through the ages in diverse cultures and traditions from all over the world—from Japan and India to Greece, Scotland, Africa, and the Americas. There are folktales, fables, Zen Buddhist tales, stories from the Judeo Christian Bible—even true historic tales. At the end of each section, educator and storyteller Norma Livo offers activity ideas and suggestions for discussions pertinent to specific stories and values. In addition, there is an appendix of general activity ideas that can be used in character education.

The Two-Thousand-Pound Goldfish Betsy Byars,2013-02-12 DIVFrom the depths of the sewers comes a monster so gargantuan that no fishbowl can hold it/divDIV Warren Otis wants to make horror films when he grows up. But as an eight-year-old boy, he has to settle for imagining movies instead of making them. He's thought up some real nightmares, including Bubbles, an innocent goldfish flushed down the toilet and exposed to a chemical that turned her into a one-ton monster./divDIV /divDIVWarren's life sometimes feels like it's a bad movie. He hasn't seen his mom for three years, since she's a fugitive from the FBI. His grandmother's cranky and his sister's acting mysterious. When things get too strange, Warren escapes into his imagination and writes one more scene featuring Bubbles. But will he ever get a chance to share his story with the people he loves?/divDIV /divDIVThis ebook features an illustrated biography of Betsy Byars including rare images from the author's personal collection./div

The Neuroethology of Predation and Escape Keith T. Sillar,Laurence D. Picton,William J. Heitler,2016-02-23 The forces of natural selection have been a primary driver in the evolution of adaptive animal behaviours. On the one hand animals must evade predation in order to survive and pass on their genes; on other hand, and for the same underlying reasons, animals must also be capable of successfully capturing prey. This situation has led to an evolutionary arms race in which predator and prey are locked in the battle to survive. A common strategy in each situation is to enhance the speed of response, resulting in the evolution of neural, muscular and biomechanical designs that produce supremely fast and eye-catching behavioral responses. The aim of this book is to illuminate the design principles of escape and predatory behaviours using a series of case histories from different animal groups and to emphasize the convergent evolution of neural circuitry that optimizes the chances of survival. Using these case histories the authors describe sensory mechanisms that aid prey and predator detection, central neural circuit designs that increase speed of response and neuromuscular and biomechanical properties that aid the performance of escape and predatory movements.

Water Garden Plants & Animals Nick Romanowski,2000 Don't drain that boggy spot--plant it says an Aussie plant authority as he catalogs some 1,000 water and bog garden plants for warm temperate zones; samples water lilies, irises, carnivorous pitcher plants, bamboos, their relatives, koi and other fauna in 190 color photos; and offers tips on cultivation and pond construction. Lists down-under water garden suppliers and mail-order specialists. Distributed in the US by ISBS. Annotation copyrighted by Book News, Inc., Portland, OR

Flow Sensing in Air and Water Horst Bleckmann,Joachim Mogdans,Sheryl L. Coombs,2014-01-22 In this book, leading scientists in the fields of sensory biology, neuroscience, physics and engineering explore the basic operational principles and behavioral uses of flow sensing in animals and how they might be applied to engineering applications such as autonomous control of underwater or aerial vehicles. Although humans possess no flow-sensing abilities, countless aquatic (e.g. fish, cephalopods and seals), terrestrial (e.g. crickets and spiders) and aerial (e.g. bats) animals have flow sensing abilities that underlie remarkable behavioral feats. These include the ability to follow silent hydrodynamic trails long after the trailblazer has left the scene, to form hydrodynamic images of their environment in total darkness, and to swim or fly efficiently and effortlessly in the face of destabilizing currents and winds.

Shibuya Goldfish, Vol. 2 Aoi Hiroumi,2018-10-30 Violent. Cannibalistic. Supernatural. Many are the rumors that have circulated about the Shibuya Sable, but sixteen-year-old Aki Touji is about to come face-to-face with the legend himself. Aki and her brother have been living in terror since the sudden appearance of giant, bloodthirsty goldfish in the streets of Shibuya, but the homeless man known as the Sable seems unfazed by the swarming schools. Tackling the fish head-on, the Sable is not afraid to fight for the city he calls home. In the Sable, Aki wonders if she has found her protector and savior in the midst of chaos or if the Sable's own chaotic mind and motives are themselves things to be feared...

Encyclopedia of Fish Physiology ,2011-06-01 Fish form an extremely diverse group of vertebrates. At a conservative estimate at least 40% of the world's vertebrates are fish. On the one hand they are united by their adaptations to an aquatic environment and on the other they show a variety of adaptations to differing environmental conditions - often to extremes of temperature, salinity, oxygen level and water chemistry. They exhibit an array of behavioural and reproductive systems. Interesting in their own right, this suite of adaptive physiologies provides many model systems for both comparative vertebrate and human physiologists. This four volume encyclopedia covers the diversity of fish physiology in over 300 articles and provides entry level information for students and summary overviews for researchers alike. Broadly organised into four themes, articles cover Functional, Thematic, and Phylogenetic Physiology, and Fish Genomics. Functional articles address the traditional aspects of fish physiology that are common to all areas of vertebrate physiology including: Reproduction, Respiration, Neural (Sensory, Central, Effector), Endocrinology, Renal, Cardiovascular, Acid-base Balance, Osmoregulation, Ionoregulation, Digestion, Metabolism, Locomotion, and so on. Thematic Physiology articles are carefully selected and fewer in number. They provide a level of integration that goes beyond the coverage in the Functional Physiology topics and include discussions of Toxicology, Air-breathing, Migrations, Temperature, Endothermy, etc. Phylogenetic Physiology articles bring together information that bridges the physiology of certain groupings of fishes where the knowledge base has a sufficient depth and breadth and include articles on Ancient Fishes, Tunas, Sharks, etc. Genomics articles describe the underlying genetic component of fish physiology and high light their suitability and use as model organisms for the study of disease, stress and physiological adaptations and reactions to external conditions. Winner of a 2011 PROSE Award Honorable Mention for Multivolume Science Reference from the Association of American Publishers The definitive encyclopedia for the field of fish physiology Three volumes which comprehensively cover the entire field in over 300 entries written by experts Detailed coverage of basic functional physiology of fishes, physiological themes in fish biology and comparative physiology amongst taxonomic Groups Describes the genomic bases of fish physiology and biology and the use of fish as model organisms in human physiological research Includes a glossary of terms

Shibuya Goldfish, Vol. 11 Hiroumi Aoi,2022-09-20 As the grotesque goldfish collective slowly makes its way through the streets, the survivors have placed all their hopes in Mibu landing the critical shot with the pathogen bullet. But their would-be savior has his own agenda, gambling the future of Shibuya—and the whole world—in a death match against the Sable! Can the survivors come up with a plan B before the goldfish escape into Tokyo and beyond?! The ultimate battle of man vs. fish will be determined once and for all!!

A Goldfish Adventure For Tatters And Fred Patti Gaurkee,2020-12-21 Patti lives in Minneapolis, Minnesota, with her husband Greg. They are the proud parents of son Michael, this book's illustrator, and daughter Sarah, Julian's mommy. This story was inspired by the sighting of two goldfish swimming in Minnehaha Creek on opposite sides of the stream. A gentle reminder: you should never release your pets into the wild. It's not good for your pets or the environment.

Shibuya Goldfish, Vol. 9 Hiroumi Aoi,2021-06-01 The Shibuya survivors are heartened by Yodoyabashi's plan to release a pathogen that will infect and destroy the masses of massive goldfish throughout the city. Unfortunately, executing her plan will require specialized equipment and another risky operation into goldfish territory. Speed is essential to prevent the mutating monsters from rendering the infection FUTILE—and no one takes care of business faster than the Shibuya Sable!

Fins of Fury: My Big Fat Zombie Goldfish Mo O'Hara,2015-03-03 Get ready for some more Fin-tastic fish fun in this third hilarious illustrated chapter book in Mo O'Hara's New York Times bestselling series. When Tom and his best friend Pradeep zapped Frankie the goldfish back to life with a battery,

they certainly didn't expect him to become a BIG FAT ZOMBIE GOLDFISH with incredible hypnotic powers. But it turns out that a zombie goldfish is a great pet to have on your side when your big brother is an evil scientist whose plans need to be thwarted. There's something fishy going on in the woods, as Tom and his best friend Pradeep take Frankie on a camping adventure. Could the Beast of Burdock Woods be real? Then, something weird is going on with Mark. He's actually being . . . nice! Meanwhile, paranormal pets (including a teleporting tortoise, a mostly invisible poodle, a levitating budgie, and a vampire kitten) are missing all over town. Can Tom and Pradeep find out what's going on before Frankie disappears?

Goldfish Anna Marie Roos,2019-09-15 Living work of art, consumer commodity, scientific hero, and environmental menace: the humble goldfish is the ultimate human cultural artifact. A creature of supposedly little memory and a short lifespan, it has held universal appeal as a reservoir for human ideas and ideals. In ancient China, goldfish were saved from predators in acts of religious reverence and selectively bred for their glittering grace. In the East, they became the subject of exquisite art, regarded as living flowers that moved, while in the West, they became ubiquitous residents of the Victorian parlor. Cheap and eminently available, today they are bred by the millions for the growing domestic pet market, while also proving to be important to laboratory studies of perception, vision, and intelligence. In this illuminating homage to the goldfish, Anna Marie Roos blends art and science to trace the surprising and intriguing history of this much-loved animal, challenging our cultural preconceptions of a creature often thought to be common and disposable.
