A Quick Guide to Pediatric Retina Wei-Chi Wu,Wai-Ching Lam,2021-01-18 This book is intended to provide a quick guide to the field of pediatric retina. It has been long accepted that retinal disorders in children differ from those in adults. Although there are plenty of published books on retinal diseases, most of them only cover adult retinal disorders. Therefore, information on pediatric retinal diseases is urgently needed. The book combines comprehensive information with rich illustrations to offer readers an in-depth understanding of the two main themes: retinopathy of prematurity (ROP) and other pediatric vitreoretinal disorders. World-renowned pediatric retina experts share their insights and research findings in areas such as ROP, familiar exudative vitreoretinopathy, Coats disease, retinoblastoma, congenital x-linked retinoschisis and hereditary retinal diseases. Topics concerning modern and future medicine such as tele-screening for ROP, E-learning for ROP, and deep learning for ROP are also included. Designed to help readers understand the contents as quickly as possible, the book includes many useful tips and pearls, as well as easy-to-follow figures. It covers the majority of pediatric retinal diseases and offers essential information on their diagnosis and management. In addition, relevant and up-to-date references are provided for those who want to explore the topics in more depth. As such, the book offers an excellent reference guide to caring for these young patients.

Proliferative Vitreoretinopathy (PVR) H. MacKenzie

Freeman, Felipe I. Tolentino, 2012-12-06 The purpose of this book is to provide an update both on the present management of

proliferative vitreoretinopathy (PVR) and on clinical and experimental research being done to control this disease. The book is divided into three parts. The first part deals with the current management of PVR. The Retina Society Classification of PVR is based in part on a gradation of severity from minimal to massive; therefore, this book attempts to correlate the management of PVR with its severity. The treatment of PVR of varying degrees of severity, from mild to the most severe form, is described by those authors with extensive experience with this spectrum of cases. Much progress has been made in the management of severe PVR as a result of vitreous injections, vitrectomy, periretinal membrane surgery, and retinal surgery. Authors in this book show that in mild and moderately severe PVR excellent results can be obtained with techniques that are less invasive and possibly less likely to stimulate further abnormal cellular proliferation. The new modalities for treatment of PVR are discussed by authors having extensive experience with them. The current status of pharmacological treatment and new concepts of the pathobiology of PVR are discussed. The second part of the book deals with questions frequently encountered in the management of PVR. These questions are answered by a panel of experts including Gary W. Abrams, Steven T. Charles, William H. Havener, Robert Machemer, Charles L. Schepens, and Walter H. Stern.

Give Back the Light James C. Moore, Steve Charles MD, 2019-01-08 A Look at a Legacy Faced with potential blindness because of a recurring detached retina, James Moore makes a last attempt to save the sight in his right eye. Hoping for a miracle, he travels from Austin to Memphis to meet with eye specialist, Steve Charles, a physician whose inventions of machines, tools, and techniques have been transformative in the field of retinal surgery, and who has performed more vitreoretinal procedures than anyone in history. As he struggles to see, Moore comes to realize that while no doctor has perhaps had a broader

impact on vision and ophthalmological surgery, no one outside the field really knows who Charles is or what he's accomplished. Moore decides to change that. New York Times best-selling author of *Bush's Brain* and Emmy award-winning television news correspondent James Moore documents his own journey in the struggle to save his eyesight, while also weaving in a detailed account of the doctor's profound accomplishments and their global impact on people. Part biography, part autobiography, *Give Back the Light* is a dual-track narrative that highlights the challenges and achievements of modern health care. This is a book about a physician who has been intimately involved in saving the vision of millions of people through the spread of his technology and surgical techniques. Dr. Charles is an historical and yet mostly unknown figure who has lived a remarkable life of great importance. In the telling, Moore helps readers view the wider world and their contributions to it in different light, and offers a prosaic understanding of the sheer joy of just seeing.

OCT and OCT Angiography in Retinal Disorders Justis P. Ehlers, 2020-09-07 Highly visual and easy to navigate, *OCT and OCT Angiography in Retinal Disorders* is a concise, reliable reference for optical coherence tomography (OCT) and OCT angiography findings in both common and uncommon retinal disorders. Each chapter explores the prognostic features of OCT and OCTA scans along with additional diagnostic modalities for comparison and correlation. Where appropriate, longitudinal changes in response to treatment or natural history are also discussed.

Retinal Detachment Jack J. Kanski, Zdenek J. Gregor, 1994 Aims to give the trainee ophthalmologist an overview of the diagnosis and management of retinal detachment. The many advances in vitreoretinal surgery have led to a complete revision, and much new material, particularly in the treatment of complex retinal detachments by vitrectomy, has been added.

Macular Degeneration Robert D'Amato, Joan Snyder, 2000-06-01 Provides an analysis of the disease, its progression, and its consequences.

Pathologic Myopia Richard F. Spaide, Kyoko Ohno-Matsui, Lawrence A. Yannuzzi, 2013-12-04 Pathological Myopia is a major cause of severe vision loss worldwide. The mechanisms for vision loss include cataract, glaucoma, retinal detachment, and above all, degeneration of the macula within the posterior staphyloma.
