*ADHD in Adults* Susan Young,Jessica Bramham,2006-11-02 This volume is a ground-braking first step in standardizing the psychosocial treatment of adults with ADHD. - Dr Sam Goldstein, University of Utah I think it is a uniquely valuable guide to how psychological thinking and treatment can be helpful to adults with ADHD - I recommend it to all professionals taking on this work. - Professor Eric Taylor, Head of Department of Child and Adolescent Psychiatry, King's College London Institute of Psychiatry What emerges fro this perspective is clinical wisdom. I could see and feel both the patient and the therapy. - Margaret Weiss, Director of research, ADHD Clinic, Children's and Women's Health Centre, Canada There is increasing recognition of the prevalence of ADHD in adulthood, which is estimated to be around one percent in the general population. These people have often experienced lifelong underachievement; they feel misunderstood and have not received the help they need. Reflecting the growing awareness of this problem, ADHD in Adults provides a comprehensive account of the presentation of adulthood ADHD, its assessment and treatment. Written by experienced practitioners in the field, the book introduces a cognitive behavioural model of ADHD from which the authors developed the Young-Bramham Programme. The book is accompanied by the Young-Bramham Programme Companion Website, [www.wiley.com/go/adhdadults](http://www.wiley.com/go/adhdadults) that provides downloadable materials for use by clients and therapists. ADHD in Adults is invaluable reading for clinicians working with adult ADHD clients in many different settings including primary care, adult mental health, learning disability, forensic, neuropsychiatry and

**The Next Phase in Heritage Language Studies: Methodological Considerations and Advancements** Fatih Bayram,Maki Kubota,Sergio Miguel Pereira Soares,2024-03-27 Over the past three decades studies investigating heritage speaker (HS) linguistic competencies have shown, time and again that, despite being L1 or 2L1 native speakers of their home language(s), HS outcomes display variation across a wide spectrum of differences as compared to each other, other types of bilinguals as well as their monolingual peers. Studies have traditionally used—mostly behavioral—methodologies rooted in adjacent established fields (e.g., L1 acquisition, adult L2 acquisition) offering, in addition to documenting and describing HS performance, important insights for linguistic theory and challenges related to (home/minority) language maintenance, contact, policy and more. A birds-eye view makes it clear that the methodologies one uses to tap into HSs' linguistic knowledge areas, if not more, are important than the phenomena under investigation, especially in light of how their unique experiences with their heritage and other languages are present across a continuum.

**Nutritional Cognitive Neuroscience Research at the Crossroads of Nutrition, Psychology, and Neuroscience** Aron K. Barbey, Elizabeth J. Johnson, Margaret Joy Dauncey, 2019-01-23 Nutritional Cognitive Neuroscience is an emerging interdisciplinary field of research that seeks to understand nutrition's impact on human cognition and brain health across the life span. Research in this burgeoning field demonstrates that many aspects of nutrition – from entire diets to specific nutrients – affect brain structure and function, and therefore have profound implications for understanding the nature of psychological health, aging, and disease. The aim of this Research Topic in Frontiers in Aging Neuroscience is to examine recent empirical and theoretical contributions from Nutritional Cognitive Neuroscience, with an emphasis on the following primary areas of inquiry. Nutrition and Brain Health An enduring aim of research in the nutritional sciences is to discover specific nutrients and dietary patterns that enhance cognitive function and brain health in the elderly. Although an abundance of evidence supports a single or a few nutrients for the promotion of cognitive performance and brain health, clinical trials using nutritional supplementation have been predominately unsuccessful. Further research is therefore needed to better characterize the contributions of specific nutrients and nutrient combinations to cognitive performance and brain health. Moderators of Nutrition's Impact on the Brain A second major area of research in Nutritional Cognitive Neuroscience investigates the mechanisms that underlie the effects of nutrition on brain health at the cellular, molecular, and circuit levels. Accumulating evidence indicates that the effects of nutrition on brain health are complex and multifactorial, reflecting the influence of particular nutrient combinations on specific brain networks and taking into account several moderating factors. Considerably more research is needed to elucidate the complex interactions between nutrition and known moderating variables – including age, nutritional status, genes, environment, and lifestyle – in determining nutrition's impact on cognitive function and brain health. Personalized Nutrition Research at the frontiers of Nutritional Cognitive Neuroscience establishes a personalized approach to nutritional intervention that takes into account individual variability in nutritional status, brain health, genes, environment, and lifestyle. The goal of personalized nutrition is to enhance the precision of nutritional intervention and to enable novel applications to psychological health, aging, and disease.
