Advanced Intelligent Computing. Theories and Applications De-Shuang Huang, Martin McGinnity, Laurent Heutte, Xiao-Ping Zhang, 2010-07-30 The International Conference on Intelligent Computing (ICIC) was formed to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence, machine learning, pattern recognition, image processing, bioinformatics, and computational biology. It aims to bring together researchers and practitioners from both academia and industry to share ideas, problems, and solutions related to the multifaceted aspects of intelligent computing. ICIC 2010, held in Changsha, China, August 18-21, 2010, constituted the 6th International Conference on Intelligent Computing. It built upon the success of ICIC 2009, ICIC 2008, ICIC 2007, ICIC 2006, and ICIC 2005, that were held in Ulsan, Korea, Shanghai, Qingdao, Kunming and Hefei, China, respectively. This year, the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. Therefore, the theme for this conference was "Advanced Intelligent Computing Technology and Applications." Papers focusing on this theme were solicited, addressing theories, methodologies, and applications in science and technology.

The Future Air Navigation System (FANS) Vincent P. Galotti, 2019-05-23 In view of the increase in air traffic, there has been a great deal of work by the nations of the world, under the auspices of ICAO, toward developing the concept for a future air navigation infrastructure to serve worldwide civil aviation efficiency. Even though the concept is well described and implementation is beginning, only technical manuals are available to advance the systems concept. This book describes the global vision for the Future Air Navigation System (FANS) and is the first text of its kind dedicated solely to Communications Navigation, Surveillance/Air Traffic Management and the CNS/ATM systems concept. In addition to the technical issues associated with CNS/ATM, the book also examines institutional, economic, labour and Human Factors issues. It is designed as a text usable in the classroom environment in universities and aviation technical schools.

Megaregionalism 2.0 Ernst Dieter Plummer Michael G, 2018-05-30 This book provides new insights for policy debates on how to strengthen the gains from trade for innovation through an inclusive trading environment that facilitates access to knowledge for all. Rising economic nationalism, especially in the United States, creates new challenges to an enlightened globalization agenda. The US government has withdrawn from the Transpacific Partnership agreement (TPP) that once was considered to be the gold standard of megaregionalism, suggesting the need to highlight once again the critical role that international trade and investment play in fostering sustainable growth and prosperity. Fostering innovation and facilitating the links between trade and innovation are becoming increasingly important for developed and developing economies alike. But equally important are economic policies to ensure that gains and losses from trade for innovation are shared by all. This book is a must read for trade economists, innovation economists, trade negotiators, trade lawyers, and academicians interested in current transformations in the global economy and their impact on innovation and economic growth.

FPGA-based Digital Convolution for Wireless Applications Lei Guan, 2017-01-16 This book presents essential

perspectives on digital convolutions in wireless communications systems and illustrates their corresponding efficient real-time field-programmable gate array (FPGA) implementations. FPGAs or generic all programmable devices will soon become widespread, serving as the “brains” of all types of real-time smart signal processing systems, like smart networks, smart homes and smart cities. The book examines digital convolution by bringing together the following main elements: the fundamental theory behind the mathematical formulae together with corresponding physical phenomena; virtualized algorithm simulation together with benchmark real-time FPGA implementations; and detailed, state-of-the-art case studies on wireless applications, including popular linear convolution in digital front ends (DFEs); nonlinear convolution in digital pre-distortion (DPD) enabled high-efficiency wireless RF transceivers; and fast linear convolution in massive multiple-input multiple-output (MIMO) systems. After reading this book, students and professionals will be able to:

- Understand digital convolution with inside-out information: discover what convolution is, why it is important and how it works.
- Enhance their FPGA design skills, i.e., enhance their FPGA-related prototyping capability with model-based hands-on examples.
- Rapidly expand their digital signal processing (DSP) blocks: to examine how to rapidly and efficiently create (DSP) functional blocks on a programmable FPGA chip as a reusable intellectual property (IP) core.
- Upgrade their expertise as both “thinkers” and “doers”: minimize/close the gap between mathematical equations and FPGA implementations for existing and emerging wireless applications.
