*Human-Computer Interaction* Andrew Sears, Julie A. Jacko, 2009-03-02 Hailed on first publication as a compendium of foundational principles and cutting-edge research, *The Human-Computer Interaction Handbook* has become the gold standard reference in this field. Derived from select chapters of this groundbreaking resource, *Human-Computer Interaction: Designing for Diverse Users and Domains* emphasizes design for users as such as children, older adults, and individuals with physical, cognitive, visual, and hearing impairments. It also discusses HCI in the context of specific domains including healthcare, games, and the aerospace industry. Topics include the role of gender in HCI, information technology and older adults, motor vehicle driver interfaces, and user-centered design in games. While human-computer interaction may have emerged from within computing, significant contributions have come from a variety of fields including industrial engineering, psychology, education, and graphic design. No where is this more apparent than when designing solutions for users as diverse as children, older adults, and individuals with physical, cognitive, visual, or hearing impairments.

**Human Factors of Visual and Cognitive Performance in Driving** Candida Castro, 2008-11-21 Human error is involved in more than 90 percent of traffic accidents, and of those accidents, most are associated with visual distractions, or looking-but-failing-to-see errors. *Human Factors of Visual and Cognitive Performance in Driving* gathers knowledge from a human factors psychology standpoint and provides deeper insight into traffic -user behavior and the ways drivers acquire information from the road. Emphasizes Drivers as Visual Information Processors Because driving is an eyes-wide-open task, drivers are exposed to a multitude of visual stimuli along their journey. This information must be correctly processed in order to make the right decisions and perform precise safety maneuvers. With contributions from more than 20 leading experts, this detailed resource discusses road and markings design, new technologies, signage, distraction, safety, situation awareness, workload, driving experience, fatigue, and driving interventions with the goal of improving driving behavior and preventing accidents. Addresses These Key Areas: Visual attention and in-vehicle technologies Interventions to reduce road trauma Avoiding collisions and the failures involved in that endeavor Using jargon-free language that is easily understood, this book compresses research from the past few decades into one accessible resource. It clearly and cohesively provides ergonomics and human factor engineers, industrial designers, and highway and roadway engineers with an overarching understanding of the incessant visual demands drivers face.

Automotive Ergonomics Heiner Bubb, Klaus Bengler, Rainer E. Grünen, Mark Vollrath, 2021-10-19 Ergonomics teaches how to design technology in such a way that it is optimally adapted to the needs, wishes and characteristics of the user. In this context, the concept of the human-machine system has become established. In a systematic way and with a detailed view of the complicated technical and perceptual psychological and methodological connections, this book explains the basics of automotive ergonomics with numerous examples. The application is shown in examples such as package, design of displays and control elements, of environmental ergonomics such as lighting, sound, vibrations, climate and smell. The design of driver assistance systems from an ergonomic perspective is also a central topic. The book is rounded off by methods of ergonomic vehicle development, the use of mock-ups, driving simulators and tests in real vehicles and prototypes. For the first time, those responsible in the automotive industry and in the field of relevant research are provided with a specialized systematic work that provides the ergonomic findings in the design of today's automobiles. This provides planners and designers of today's automobiles with concrete information for ergonomic product development, enabling them to keep an eye on decisive requirements and subsequent customer acceptance. This book is a translation of the original German 1st edition *Automobilergonomie* by Heiner Bubb, Klaus Bengler, Rainer E. Grünen & Mark Vollrath, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2015. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.
