Real-time Vehicle Tracking System Using GPS & GSM Ejaz Qayyum,Zeeshan Mohsin,Junaid Malik,2013-01 Real-time Vehicle Tracking System (VTS) is a system that uses Global Positioning System (GPS) to track and plot the location of its vehicle on the map. VTS combine GPS technology, cellular communications, street-level mapping, and an intuitive user interface, with the ostensible goal of improving Vehicle tracking and customer service. For example, a customer using VTS system is able to pinpoint the longitude, latitude, ground speed of a given vehicle. The vehicle's location can be quickly found and it could be rerouted to provide timely delivery to a nearby customer. VTS systems also enable customers to track their vehicle on mobile phone. VTS systems include a network of vehicles that are equipped with a GPS receiver, a GSM modem, and a laptop. This network connects with a base station consisting of a PC computer station as well as a GSM modem and interface. Where any vehicle can be viewed on the map by a moving dot Real-Time VTS systems can be used to increase customer's dispatching procedure and measure field personnel's live performance.

around clueless of where we were, struggling with roadmaps bought at gas stations that couldn't be folded back neatly once opened, and - suddenly - there was an amiable female voice coming out of the dashboard offering directions to our destinations and showing no signs of impatience when we made wrong turns. Actually, GPS is based on simple ideas that have been around for centuries, but their implementation had to wait until the required technologies matured and came together. This book discusses these principles, technologies, and how GPS came to be developed. The only prerequisite for this book is curiosity about a technology that has insinuated itself into our lives in a way that we can't imagine how we ever lived without it.
