Advances in Human Aspects of Transportation Neville A. Stanton, Steven Landry, Giuseppe Di Bucchianico, Andrea Vallicelli, 2016-07-26 This book discusses the latest advances in research and development, design, operation and analysis of transportation systems and their complementary infrastructures. It reports on both theories and case studies on road and rail, aviation and maritime transportation. The book covers a wealth of topics, from accident analysis, vehicle intelligent control, and human-error and safety issues to next-generation transportation systems, model-based design methods, simulation and training techniques, and many more. A special emphasis is given to smart technologies and automation in transport, as well as to user-centered, ergonomic and sustainable design of transport systems. The book, which is based on the AHFE 2016 International Conference on Human Factors in Transportation, held on July 27-31, 2016, in Walt Disney World®, Florida, USA, mainly addresses transportation system designers, industrial designers, human-computer interaction researchers, civil and control engineers, as well as vehicle system engineers. Moreover, it represents a timely source of information for transportation policy-makers and social scientists dealing with traffic safety, management, and sustainability issues in transport.

Kala Azar in South Asia E. Noiri, T.K. Jha, 2017-01-11 Visceral leishmaniasis (VL), (also known as black fever or Kala-azar) is a life-threatening disease first reported from the Indian subcontinent. VL ranks as the world's second largest parasitic disease killer and is a neglected tropical disease. Most of those infected by this life-threatening disease are uneducated daily wagers working to support their families, and vectors easily disseminate the disease to their neighbors. Owing to recent involvement of stakeholders, the number of patients is decreasing, but eradication remains a distant goal. This second edition presents latest reports of visceral Leishmaniasis by specialists working at the forefront of the endemic areas in Indian subcontinent. It also introduces vaccine development and inhibitors to Trypanosomatidae; some of them describing feasibility studies in visceral Leishmaniasis for the first time. Recent progress of the Science and Technology Research Partnership for Sustainable Development (SATREPS) is also reviewed and the contents share this collaborative research from the forefront of endemic sites in Bangladesh. Widely covering basic, clinical, epidemiological and entomological aspects, this volume will be of great interest to dedicated researchers interested in Leishmaniasis and to experts of NTDs in global health. There is a tide in the affairs of men. Which, taken at the flood, leads on to fortune; Omitted, all the voyage of disease control is bound in shallows and in

miseries. ~modified from Shakespeare ~

Unmanned Aerial Remote Sensing David R. Green, 2020-07-10 Unmanned Aircraft Systems (UAS) are a rapidly evolving technology with an expanding array of diverse applications. In response to the continuing evolution of this technology, this book discusses unmanned aerial vehicles (UAVs) and similar systems, platforms and sensors, as well as exploring some of their environmental applications. It explains how they can be used for mapping, monitoring, and modeling a wide variety of different environmental aspects, and at the same time addresses some of the current constraints placed on realizing the potential use of the technology such as flight duration and distance, safety, and the invasion of privacy etc. Features of the book: Provides necessary theoretical foundations for pertinent subject matter areas Introduces the role and value of UAVs for geographical data acquisition, and the ways to acquire and process the data Provides a synthesis of ongoing research and a focus on the use of technology for small-scale image and spatial data acquisition in an environmental context Written by experts of the technology who bring together UAS tools and resources for the environmental specialist Unmanned Aerial Remote Sensing: UAS for Environmental Applications is an excellent resource for any practitioner utilizing remote sensing and other geospatial technologies for environmental applications, such as conservation, research, and planning. Students and academics in information science, environment and natural resources, geosciences, and geography, will likewise find this comprehensive book a useful and informative resource.

Advances in Human Aspects of Transportation: Part II Neville Stanton, Steven Landry, Giuseppe Di Bucchianico, Andrea Vallicelli , 2021-07-19 Human Factors and Ergonomics have made a considerable contribution to the research, design, development, operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure, aviation and maritime transportation. This book presents recent advances in the Human Factors aspects of Transportation. These advances include accident analysis, automation of vehicles, comfort, distraction of drivers (understanding of distraction and how to avoid it), environmental concerns, in-vehicle systems design, intelligent transport systems, methodological developments, new systems and technology, observational and case studies, safety, situation awareness, skill development and training, warnings and

workload. This book brings together the most recent human factors work in the transportation domain, including empirical research, human performance and other types of modeling, analysis, and development. The issues facing engineers, scientists, and other practitioners of human factors in transportation research are becoming more challenging and more critical. The common theme across these sections is that they deal with the intersection of the human and the system. Moreover, many of the chapter topics cross section boundaries, for instance by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool. This is in keeping with the systemic nature of the problems facing human factors experts in rail and road, aviation and maritime research– it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment, but as embedded issues that can only be understood as a part of an overall system.

Pedestrian Collisions Christopher Armstrong, 2018-11-02 Collision Reconstruction Methodologies - Volume 10B - The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include: • Night Vision Study and Photogrammetry • Vehicle Event Data Recorders • Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction - appealing to crash analysts, consultants and safety engineers alike.

Citizens' Participation in Urban Transformations Chiara Scanagatta, 2023-07-11 Humanity has always seen a close relationship between the place of living and the ways of life. Today, the quality of life certainly improves if places of living are attentive to the ever-changing needs of communities. The space of the city should not be static, but dynamic and flexible. The aim of this work is therefore to pay more and more attention to the in-depth studies, on which many architectural scholars are working today, necessary for the fabbricato to be more and more responsive to the population that uses it, both in the sense of the physical spaces and the materials that guarantee its quality and efficiency. It is a theme to which architects are paying plenty of attention because it is becoming increasingly urgent, also in view of the European Union's expectations on the matter, to investigate the urban and building components and the effects they produce in terms of e.g., quality of materials, functionality of spaces, living habits of the population, proximity of services. This work arose from an experience of personal collaboration in a European project of innovative participatory design carried out in Verona Sud during the PhD period. Subsequently, it was analysed and examined in depth which theoretical and operational aspects actually make it possible to

implement urban transformations that link the relations between the environment and quality of life. In this large field, it therefore becomes predominant to re-propose the centrality of attention to the community's expectations, ways of living, decision-making systems, techniques used, knowledge and understanding of objective data on the environment, and thus to overcome common stereotypes on all these issues.

Dynamics of the Pantanal Wetland in South America Ivan Bergier, Mario Luis Assine, 2015-11-30 This book provides readers with in-depth insights into the changes in the Pantanal wetland from its formation to the actual and likely future states. It reveals that today's Pantanal is an evolutionary consequence of geological, ecological and, more recently, man-made events taking place at distinct space-time intervals. Topics include geotectonics and sun-earth interactions, which largely dictate the rate of drastic changes that eventually disrupt ecological stability and radically rebuild the regional landscape. Furthermore, the biota-climate system is discussed as a major driver reshaping the ecohydrology functioning of the landscape on an intermediate timescale. Also covered are major changes in the landscape ecohydrology and biodiversity due to recent land-use and climate changes induced by humankind in the Anthropocene. The ability to recognize how those temporal scales impact the Pantanal wetland provides the opportunity for wise management approaches and the sustainable development of the region.
