Decentralised Governance, Development Programmes and Elite Capture D. Rajasekhar, M. Devendra Babu, R. Manjula, 2018-10-05 This book discusses the elite capture taking place in the development programmes implemented through Grama Panchayats (GPs), the lowest tier in the rural local self-government structure in India. Inclusive growth being the cherished goal of all the developing countries, including India, the book assesses whether checks and balances incorporated in development programmes prevent elite capture and promote inclusive development. It also highlights the role of community-based organisations, such as SHGs, in ensuring development benefits reach marginalized groups. The policy makers in India introduced decentralised governance to facilitate the participation of marginalized groups in the planning and implementation of development programmes at the local level, and to ensure that development benefits reach them. International agreements such as the Hyogo Framework for Action, Millennium Development Goals and Sustainable Development Goals also call for decentralised governance for inclusive growth. The issue of elite capture has traditionally been studied mainly from the sociological perspective, i.e., how the local upper/dominant castes and classes garner the positions and benefits. But with the new and structured governance system that is in place at the local level in contemporary India, this book explores how decentralised governance is addressing the issue of elite capture. The study closely analyses micro processes of decentralisation to understand how elite capture is taking place. Additionally, it examines this concern from both governance and economic perspectives. The scope of the book is wide, and encompasses several aspects such as the functioning of the local government, decentralised governance, checks and balances in development programmes, community-based organisations, the upward political linkages and elite capture. It is equally relevant to researchers from several social science disciplines, civil society, policy makers, and implementers from the grassroots to national level government.

*Modeling and Managing Interdependent Complex Systems of Systems* Yacov Y. Haimes, 2018-09-04 A comprehensive guide to the theory, methodology, and development for modeling systems of systems *Modeling and Managing Interdependent Complex Systems of Systems* examines the complexity of, and the risk to, emergent interconnected and interdependent complex systems of systems in the natural and the constructed environment, and in its critical infrastructures. For systems modelers, this book focuses on what constitutes complexity and how to understand, model and manage it. Previous modeling methods for complex systems of systems were aimed at developing theory and methodologies for uncoupling the interdependencies and interconnections that characterize them. In this book, the author extends the above by utilizing public- and private- sector case studies; identifies, explores, and exploits the core of interdependencies; and seeks to understand their essence via the states of the system, and their dominant contributions to the complexity of systems of systems. The book proposes a reevaluation of fundamental and practical systems engineering and risk analysis concepts on complex systems of systems developed over the past 40 years. This important resource: Updates and streamlines systems engineering theory, methodology, and practice as applied to complex systems of systems Introduces modeling methodology inspired by philosophical and conceptual thinking from the arts and sciences Models the complexity of emergent interdependent and interconnected complex systems of systems by analyzing their shared states, decisions, resources, and decisionmakers Written for systems engineers, industrial engineers, managers, planners, academics and other professionals in engineering systems and the environment, this text is the resource for understanding the fundamental principles of modeling and managing complex systems of systems, and the risk thereto.

**GPS and Google Earth for Development: How to Create, Share and Collaborate with Maps on the Net** Santiago Arnalich, Julio Urruela, 2012-09 This book shows you how to use a GPS and Google Earth to create simple and expressive maps to share on the web like the one shown on the cover. With a reading time of a mere 10 hours you will learn to work with a GPS without making mistakes, to use it with Google Earth including in areas without internet access and to quickly create diverse interactive maps that other people can see and modify over the internet without the need for experts or unnecessary complications. Even though it has been written in the context of Relief and Development work, the same process is valid for whatever other application.

Private Equity H. Kent Baker, Greg Filbeck, Halil Kiymaz, 2015-06-25 During the past few decades, private equity (PE) has attracted considerable attention from investors, practitioners, and academicians. In fact, a substantial literature on PE has emerged. PE offers benefits for institutional and private wealth management clients including diversification and enhancement of risk-adjusted returns. However, several factors such as liquidity concerns, regulatory restrictions, and the lack of transparency limit the attractiveness of some PE options to investors. The latest volume in the Financial Markets and Investments Series, *Private Equity: Opportunities and Risks* offers a synthesis of the theoretical and empirical literature on PE in both emerging and developed markets. Editors H. Kent Baker, Greg Filbeck, Halil Kiymaz and their co-authors examine PE and provide important insights about topics such as major types of PE (venture capital, leveraged buyouts, mezzanine capital, and distressed debt investments), how PE works, performance and measurement, uses and structure, and trends in the market. Readers can gain an in-depth understanding about PE from academics and practitioners from around the world. *Private Equity: Opportunities and Risks* provides a fresh look at the intriguing yet complex subject of PE. A group of experts takes readers through the core topics and issues of PE, and also examines the latest trends and cutting-edge developments in the field. The coverage extends from discussing basic concepts and their application to increasingly complex and real-world situations. This new and intriguing examination of PE is essential reading for anyone hoping to gain a better understanding of PE, from seasoned professionals to those aspiring to enter the demanding world of finance.

*The Age of Sharing* Nicholas A. John, 2017-09-05 Sharing is central to how we live today: it is what we do online; it is a model of economic behaviour; and it is also a type of therapeutic talk. Sharing embodies positive values such as empathy, communication, fairness, openness and equality. The Age of Sharing shows how and when sharing became caring, and explains how its meanings have changed in the digital age. But the word sharing also camouflages commercial or even exploitative relations. Websites say they share data with advertisers, although in reality they sell it, while parts of the sharing economy look a great deal like rental services. Ultimately, it is argued, practices described as sharing and critiques of those practices have common roots. Consequently, the metaphor of sharing now constructs significant swathes of our social practices and provides the grounds for critiquing them; it is a mode of participation in the capitalist order as well as a way of

resisting it. Drawing on nineteenth-century literature, Alcoholics Anonymous, the American counterculture, reality TV, hackers, Airbnb, Facebook and more, *The Age of Sharing* offers a rich account of a complex contemporary keyword. It will appeal to students and scholars of the internet, digital culture and linguistics.

**NETWORKING 2005. Networking Technologies, Services, and Protocols; Performance of Computer and Communication Networks; Mobile and Wireless Communications Systems** Raouf Boutaba, Kevin Almeroth, Ramon Puigjaner, Sherman Shen, James P. Black, 2005-05-02 This book constitutes the refereed proceedings of the 4th International IFIP-TC6 Networking Conference, NETWORKING 2005, held in Waterloo, Canada in May 2005. The 105 revised full papers and 36 posters were carefully reviewed and selected from 430 submissions. The papers are organized in topical sections on peer-to-peer networks, Internet protocols, wireless security, network security, wireless performance, network service support, network modeling and simulation, wireless LAN, optical networks, Internet performance and Web applications, ad-hoc networks, adaptive networks, radio resource management, Internet routing, queuing models, monitoring, network management, sensor networks, overlay multicast, QoS, wireless scheduling, multicast traffic management and engineering, mobility management, bandwidth management, DCMA, and wireless resource management.

*Flexible Working and Training for Doctors and Dentists* Anne Hastie, Elisabeth Paice, Elizabeth Boath, 2018-12-07 This work includes a foreword by Elisabeth Paice. *Flexible Training and Working for Doctors and Dentists* is a real-world, practical guide to the opportunities available for flexible training and working. It explains the current rules and regulations and promotes the 'Improving Working Lives' initiative for NHS workers - a Department of Health priority. It presents a wealth of information, including details on sabbaticals, management roles, maternity and sickness leave, academic life and the GP returner scheme. This straightforward guide will be invaluable to doctors and dentists working in primary and secondary care, medical and dental students and staff, and doctors and dentists in training. Healthcare policy makers and shapers will find it an excellent resource, along with healthcare managers and careers counsellors. The first book on flexible training and working in medicine and dentistry. The subject matter is highly topical. The proportion of women in medicine and dentistry rises each year, and with it the demand for less than full-time working. This book will prove a useful resource for any doctors or dentists who are contemplating working less than full-time themselves, or who guide or manage others making these choices. Clinical tutors, course organisers and deanery staff will find it invaluable, and unique. - Elisabeth Paice, in her Foreword.

**The Complete Guide to the Olympus O-MD E-M1 II (B&W Edition)** Tony Phillips, 2017-09-15 The OM-D E-M1 camera has been hailed as The King of Micro Four Thirds format for good reason! The engineers gave this camera one of the most customizable and nuanced user interfaces ever. While a good move, even experienced users will sometimes need help getting their arms around all of the different permutations of features or groups of features spread across different menus. In this detailed and easy-to-read reference, professional photographer Tony Phillips simplifies the complexity and provides the shortest learning curve for this infinitely-configurable camera. Get the most out of your investment from the most highly-regarded source of books for digital cameras!

Information Systems Security Atul Prakash, Rudrapatna Shyamasundar, 2014-12-03 This book constitutes the refereed proceedings of the 10th International Conference on Information Systems Security, ICISS 2014, held in Hyderabad, India, in December 2014. The 20 revised full papers and 5 short papers presented together with 3 invited papers were carefully reviewed and selected from 129 submissions. The papers address the following topics: security inferences; security policies; security user interfaces; security attacks; malware detection; forensics; and location based security services.

Satellite Navigation Systems Michael J Rycroft, 2013-04-17 T. Ito, International Space University, Strasbourg Central Campus, 1 Rue Jean Dominique Cassini, Parc d'Innovation, 67400 Illkirch-Graffenstaden, France e-mail: ito@isu. isunet. edu M. J. Rycroft, CAESAR Consultancy, 35 Millington Road, Cambridge CB3 9HW, UK e-mail: Michael. J. Rycroft@ukgateway. net As Symposium Committee Chair for the 2003 International Space University (ISU) Symposium, and Editor of this Proceedings volume, respectively, we write this introduction. The success of previous ISU symposia suggests that the ISU has developed a unique and winning formula for a novel type of symposium. The characteristics of ISU symposia are that they: • Adopt a broad, and interdisciplinary, perspective • Address all aspects of the subject, ranging from policy, business, organisational, and legal issues to technical and scientific topics • Foster a constructive dialogue among very different sectors of the space community, and • Allow ample time for interactive discussions. The present Symposium is no exception. It considers the very timely topic of space-based systems for global positioning and navigation, ranging from the GPS system developed by the US military to the Russian GLONASS system, and on to the future European Galileo system. Other nations are planning regional augmentation systems.

*Multiaccess, Mobility and Teletraffic in Wireless Communications: Volume 4* Ezio Biglieri, Luigi Fratta, Bijan Jabbari, 2013-03-09 The unrelenting growth of wireless communications continues to raise new research and development problems that require unprecedented interactions among communication engineers. In particular, specialists in transmission and specialists in networks must often cross each other's boundaries. This is especially true for CDMA, an access technique that is being widely accepted as a system solution for next-generation mobile cellular systems, but it extends to other system aspects as well. Major challenges lie ahead, from the design of physical and radio access to network architecture, resource management, mobility management, and capacity and performance aspects. Several of these aspects are addressed in this volume, the fourth in the edited series on Multiaccess, Mobility and Teletraffic for Wireless Communications. It contains papers selected from MMT'99, the fifth Workshop held on these topics in October 1999 in Venezia, Italy. The focus of this workshop series is on identifying, presenting, and discussing the theoretical and implementation issues critical to the design of wireless communication networks. More specifically, these issues are examined from the viewpoint of

the impact each one of them can have on the others. Specific emphasis is given to the evolutionary trends of universal wireless access and software radio. Performance improvements achieved by spectrally efficient codes and smart antennas in experimental GSM testbeds are presented. Several contributions address critical issues regarding multimedia services for Third-Generation Mobile Radio Networks ranging from high rate data transmission with CDMA technology to resource allocation for integrated Voice/WWW traffic.
