The Internet of People, Things and Services Claire A Simmers,Murugan Anandarajan,2018-03-19 The transformational technologies of the Internet-Web compound continue to exert a vast and readily apparent influence on the way we live and work. In recent times, internet penetration is now very high in most parts of the world, impacting the context and content of the workplace and the boundary between work and private life is even more porous. Not only has the reach increased, but the technologies to access the Internet-Web have further evolved towards increasing portability. The hardware evolution from desktops to laptops to mobile technologies (phones, tablets, watches, eyeglasses) marches forward. The increasing mobility and 24/7 accessibility offers the opportune time to revisit the transformations occurring. Today the Internet consists of billions of digital devices, people, services and other physical objects with the potential to seamlessly connect, interact and exchange information about themselves and their environment. Organizations now use these digital devices and physical objects to produce and consume Internet-based services. This new Internet ecosystem is commonly referred to as the Internet of People, Things and Services (IoPTS). In this follow-up to their 2006 volume, Simmers & Anandarajan examine how The Internet of People, Things and Services (IoPTS) transforms our workplaces. Information and communications technology (ICT) expansion from desktops to laptops to ubiquitous smart objects that sense and communicate directly over the internet – the IoPTS – offers us the opportune time to revisit how the Internet transforms our workplaces.

Location-Aware Environmental Monitoring For Mobile Workers Martin Christl,2009-04 Master's Thesis from the year 2008 in the subject Computer Science - Commercial Information Technology, grade: Sehr Gut, University of Vienna (Distributed und Multimedia Systems), course: Spezialisierung: Vernetzte und Verteilte Systeme, language: English, abstract: The aim of this master's thesis ist to investigate the practicability and usability of mobile GIS applications in a selected real-world scenario in the field. Therefore the important questions are how to provide correct geospatial positioning values and how to support the gathering of useful data in extreme field situations by implementing a mobile GIS prototype. The whole project discussed in this thesis was initiated by the Institute of Distributed and Multimedia Systems (Faculty of Computer Sciences) through the Austrian GRID initiative in a close collaboration with the Umweltbundesamt, the Federal Environment Agency of Austria. An environmental observation area in the national park Northern Calcareous Alps in Upper Austria, called Zöbelboden was chosen to test the accuracy of GPS signals and according positioning data in forested or mountainous areas as well as to study the advantages and benefits of using mobile devices in outdoor situations and free nature. This area, a part of the UN ECE's Integrated Monitoring Programme, is used for long-term environmental data in selected observation areas. Exactly this project is a multidisciplinary International Cooperative Programme (ICP) on Integrated Monitoring (IM) of Air Pollution Effects on Ecosystems, which covers regions of the United Nations Economic Commission for Europe (UN ECE). In this master thesis a prototype will be introduced which allows capturing the desired ecological data digitally using a personal digital assistant (PDA). An easy-to-use application based on ESRI's ArcPad Application Developer has been developed for use on Windows Mobile PocketPCs which integrates the Umweltbundesamt's own ESRI data layers. Thus, the mobile devic

Workplace Privacy Jonathan Remy Nash,Samuel Estreicher,2010-01-01 Employers everywhere today must delicately balance the need to maintain a safe and proper workplace with employees rights and the risk of liability. The fact that new technologies make it easier for employers to monitor their employees whereabouts, communications, and activities only serves to make the issue more acute. Now, in this collection of essays by outstanding scholars and practitioners in U.S. labour law and practice, employers and their legal counsel will find a broad array of important contributions to the law and study of workplace privacy. Based on papers delivered at the 58th annual labour conference of the New York University Center on Labor and Employment Law, this book reflects and analyzes recent developments, providing the best comprehensive work on U.S. workplace privacy. How far should employers be allowed to go in monitoring employers? Where do employers rights to run their businesses end and employees privacy rights begin? Is the existing law sufficient to resolve recurring conflicts? These are among the big questions tackled in these articles. Among the many specific issues covered are the following: use of global positioning systems (GPS) in tracking employees; background checking for job applicants; email monitoring; physical monitoring of employees; scope and lawfulness of so-called lawful activity laws; employer involvement in employees nonworkplace behaviour (e.g., drug testing); employees rights of association; regulation of fraternizing and dating among employees; employee privacy issues in employer-union bargaining; privacy issues in public sector employment; privacy issues and threats of terrorism; and efforts by employers to verify employees nationality and immigration status. Authors pay special attention to fast-break developments such as in the extraterritorial reach of the European Union s data protection directive and the current status of the U.S. National Labor Relations Board s Register-Guard decision. A special feature is a very early draft of a chapter of the forthcoming Restatement (Third) of Labor and Employment Law made available through the graces of the American Law Institute on the U.S. common law of employee privacy rights. As always, this important annual publication offers definitive current scholarship in its theme area of labour and employment law. As such, it will be of inestimable value to practitioners, government officials, academics, and others interested in developments in employment and labour relations law and practice.

Recent Advances in Indoor Localization Systems and Technologies Gyula Simon,László Sujbert,2021-08-30 Despite the enormous technical progress seen in the past few years, the maturity of indoor localization technologies has not yet reached the level of GNSS solutions. The 23 selected papers in this book present the recent advances and new developments in indoor localization systems and technologies, propose novel or improved methods with increased performance, provide insight into various aspects of quality control, and also introduce some unorthodox positioning methods.

Information Technology and the World of Work Daphne Gottlieb Taras,James T. Bennett,Anthony M. Townsend,2017-07-12 Information technologies have become both a means and an end, transforming the workplace and how work is performed. This ongoing evolution in the work process has received extensive coverage but relatively little attention has been given to how changing technologies and work practices affect the workers themselves. This volume specifi cally examines the institutional and social environment of the workplaces that information technologies have created.

Digital Transformation of Enterprise Architecture Vivek Kale,2019-07-08 In this book, Vivek Kale makes an important contribution to the theory and practice of enterprise architecture ... this book captures the breadth and depth of information that a modern enterprise architecture must address to effectively support an agile enterprise. This book should have a place in every practicing architect's library. —John D. McDowall, Author of Complex Enterprise Architecture Digital Transformation of Enterprise Architecture is the first book to propose Enterprise Architecture (EA) as the most important element (after Business Models) for digital transformation of enterprises. This book makes digital transformation more tangible by showing the rationale and typical technologies associated with it, and these technologies in turn reveal the essence of digital transformation. This book would be useful for analysts, designers and developers of future-ready agile application systems. This book proposes that it is the perennial quest for interoperability & portability, scalability, availability, etc., that has directed and driven the evolution of the IT/IS industry in the past 50 years. It is this very quest that has led to the emergence of technologies like service-oriented, cloud, and big data computing. In addition to the conventional attributes of EA like interoperability, scalability and availability, this book identifies additional attributes of mobility, ubiquity, security, analyticity, and usability. This pragmatic book: Identifies three parts effort for any digital transformation: Business Models, Enterprise Architectures and Enterprise Processes. Describes eight attributes of EA: interoperability, scalability, availability, mobility, ubiquity, security, analyticity, and usability. Explains the corresponding technologies of service-oriented, cloud, big data, context-aware, Internet of Things (IoT), blockchain, soft, and interactive computing. Briefs on auxiliary technologies like integration, virtualization, replication, spatio-temporal databases, embedded systems, cryptography, data mining, and interactive interfaces that are essential for digital transformation of enterprise architecture. Introduces interactive interfaces like voice, gaze, gesture and 3D interfaces. Provides an overview of blockchain computing, soft computing, and customer interaction systems. Digital Transformation of

Enterprise Architecture proposes that to withstand the disruptive digital storms of the future, enterprises must bring about digital transformation, i.e. a transformation that affects an exponential change (amplification or attenuation) in any aspect of the constituent attributes of EA. It proposes that each of these technologies (service-oriented, cloud, big data, context-aware, IoT, blockchain, soft, and interactive computing) bring about digital transformation of the corresponding EA attribute viz. interoperability, scalability, availability, mobility, ubiquity, security, analyticity, and usability.

Privacy@work Frank Hendrickx, Elena Gramano, David Mangan, 2023-06-12 The right to privacy is a fundamental right. Along with the related right to personal data protection, it has come to take a central place in contemporary employment relations and shows significant relevance for the future of work. This thoroughly researched volume, which offers insightful essays by leading European academics and policymakers in labour and employment law, is the first to present a thoroughly up-to-date Europe-wide survey and analysis of the intensive and growing interaction of workplace relations systems with developments in privacy law. With abundant reference to the EU's General Data Protection Regulation, the case law of the European Court of Human Rights, and the work of the International Labour Organisation, the book proceeds as a series of country chapters, each by a recognised expert in a specific jurisdiction. Legal comparison is based on a questionnaire circulated to the contributors in advance. Each country chapter addresses the national legal weight of such issues and topics as the following: interaction of privacy and data protection law; legitimacy, purpose limitation, and data minimisation; transparency; role of consent; artificial intelligence and automated decision-making; health-related data, including biometrics and psychological testing; monitoring and surveillance; and use of social media. A detailed introductory overview begins the volume. The research for this book is based on a dynamic methodology, founded in scientific desk research and expert networking. Recognising that the need for further guidance for privacy at work has been demonstrated by various European and international bodies, this book delivers a signal contribution to the field for social partners, practitioners, policymakers, scholars, and all other stakeholders working at the crossroads of privacy, data protection, and labour law.

Making Sense of AI Anthony Elliott, 2021-09-23 Industrial robots, self-driving cars, customer-service chatbots and Google's algorithmic predictions have brought the topic of artificial intelligence into public debate. Why is AI the source of such intense controversy and what are its economic, political, social and cultural consequences? Tracing the changing fortunes of artificial intelligence, Elliott develops a systematic account of how automated intelligent machines impact different spheres and aspects of public and private life. Among the issues discussed are the automation of workforces, surveillance capitalism, warfare and lethal autonomous weapons, the spread of racist robots and the automation of social inequalities. Elliott also considers the decisive role of AI in confronting global risks and social futures, including global pandemics such as COVID-19, and how smart algorithms are impacting the search for energy security and combating climate change. Making Sense of AI provides a judiciously comprehensive account of artificial intelligence for those with little or no previous knowledge of the topic. It will be an invaluable book both for students in the social sciences and humanities and for general readers.

Appendices feature sample field note forms, an extensive bibliography on advanced and specialized methods, and online metadata sources.
