**Mobile Entity Localization and Tracking in GPS-less Environnments** Richard Fuller,Xenofon D. Koutsoukos,2009-09-11 This book constitutes the refereed proceedings of the second International Workshop on Mobile Entity Localization and Tracking in GPS-less Environnments, MELT, held in Orlando, Florida, USA, in September 2009 in conjunction with the 11th International Conference on Ubiquitous Computing (Ubicomp 2009). MELT is a forum for the state-of-the-art technologies in mobile localization and tracking and novel applications of location-based services. The research contributions in these proceedings cover significant aspects of localization and tracking of mobile devices that include techniques suitable for smart phones and mobile sensor networks in both outdoor and indoor environments using diverse sensors and radio signals. Novel theoretical methods, algorithmic design and analysis, application development, and experimental studies are presented in 14 papers that were reviewed carefully by the program committee. In addition, three invited papers, with topics on location determination using RF systems, Cramer-Rao-Bound analysis for indoor localization and approaches targeting mobile sensor networks, are also included in the proceedings.

**GPS for Success & Happiness** Leong A Sam,2014-04 GPS for Success & Happiness is based on the author's personal learning, application and experience by living his life guided closely by the Eight Fold Paths as taught by the Buddha. One has found them to be powerful and effective in leading one's life in a more simplistic and harmonious manner. Although one can't claim to have been a perfect practitioner, one has benefitted tremendously by following these paths. Being aware that religions, while being good and useful for humans, one is also aware that religions can be very personal and divisive. Thus, one has to qualify that right understanding of the Buddha's teaching is crucial. From my personal understanding, the Buddha has never shared his Enlightenment as a religion. He has taught them as the way of life that can help cease sufferings and thus gain purpose and happiness in life. GPS for Success & Happiness is written for people who are willing to open their mind and have the desire to be successful and happy. Just as a GPS will lead us to our destination once we set its location points, the contents of this book will guide the readers to reach his or her life goals once they have determined them. Just as success is different thing to different people, the contributors for happiness are different for different people. However, the universal laws for success and happiness have been found to be consistent and common for all. Infringement of any of the universal laws will without a doubt lead to some forms of unhappiness. Thus, it is my desire that by sharing my personal observations and experiences in my personal life guided by these laws will help enable my fellow humans to experience their own success and enjoy their own happiness. In this materialistic world of ours, I have observed that most people have lost the understanding of what success is and how to be happy. Thus, it is aspired that these eight universal laws which has provided the paths to help millions of people live more successful and happier lives will continue to make more people ease their sufferings and live more successful and happier lives. The formulae for success and happiness extolled in this book are simple to understand and practice and as we all are aware, for us to be successful and happy, we must, apart from knowing and having the knowledge, take the necessary actions to convert our desires to reality. In short, we must BE, DO and HAVE. Let this GPS guide you to your destiny of success, whatever success is to you, and enjoy your happiness your way.

**digitalSTS** Janet Vertesi,David Ribes,2019-05-07 New perspectives on digital scholarship that speak to today's computational realities Scholars across the humanities, social sciences, and information sciences are grappling with how best to study virtual environments, use computational tools in their research, and engage audiences with their results. Classic work in science and technology studies (STS) has played a central role in how these fields analyze digital technologies, but many of its key examples do not speak to today's computational realities. This groundbreaking collection brings together a world-class group of contributors to refresh the canon for contemporary digital scholarship. In twenty-five pioneering and incisive essays, this unique digital field guide offers innovative new approaches to digital scholarship, the design of digital tools and objects, and the deployment of critically grounded technologies for analysis and discovery. Contributors cover a broad range of topics, including software development, hackathons, digitized objects, diversity in the tech sector, and distributed scientific collaborations. They discuss methodological considerations of social networks and data analysis, design projects that can translate STS concepts into durable scientific work, and much more. Featuring a concise introduction by Janet Vertesi and David Ribes and accompanied by an interactive microsite, this book provides new perspectives on digital scholarship that will shape the agenda for tomorrow's generation of STS researchers and practitioners.

**Programming GPS and OpenStreetMap Applications with Java** Kristof Beiglböck,2012-01-27 Written by an expert in the development of GPS systems with digital maps and navigation, Programming GPS and OpenStreetMap Applications with Java: The RealObject Application Framework provides a concrete paradigm for object-oriented modeling and programming. It presents a thorough introduction to the use of available global positioning data for the development of applications involving digital maps. The author first describes the different formats of GPS data and digital maps and shows how to use recorded GPS traces to replay and display this data on a digital map. Then, he works through in detail the processing steps of obtaining dedicated data from OpenStreetMaps and how to extract a network for a simple navigation application. For each topic covered—GPS data, OpenStreetMaps, and navigation—Java code is developed that can easily be adapted to the readers' needs and locality. Finally, all components are put together in a sample computer-game

application modeled on the well-known board game, Scotland Yard. The computer game is intended to be a basis from which readers can develop and customize their own application for their desired geographical area. The developed application can be published on the Internet and made available for interactive multiplayer competition. This book provides a fun and interesting way to learn distributed programming with Java and real-world data.
