Interface Support for Creativity, Productivity, and Expression in Computer Graphics Ursyn, Anna,2018-10-05 Interfaces within computers, computing, and programming are consistently evolving and continue to be relevant to computer science as it progresses. Advancements in human-computer interactions, their aesthetic appeal, ease of use, and learnability are made possible due to the creation of user interfaces and result in further growth in science, aesthetics, and practical applications. Interface Support for Creativity, Productivity, and Expression in Computer Graphics is a collection of innovative research on usability, the apps humans use, and their sensory environment. While highlighting topics such as image datasets, augmented reality, and visual storytelling, this book is ideally designed for researchers, academicians, graphic designers, programmers, software developers, educators, multimedia specialists, and students seeking current research on uniting digital content with the physicality of the device through applications, thus addressing sensory perception.

Electronic Art Roger F. Malina,W. Van der Plas,T. Hokken,J. den Biggelaar,2013-10-22 Computers are more and more becoming creative tools in music as well as in the visual arts and design. In the last few years, it has become clear that digital technology provides a platform for multimedia productions as well as a medium for new art forms. Computer Music and Computer Graphics & Animation have their own international forums. The need was felt, however, to bring together the diverse disciplines within art and technology in one international event - the First International Symposium on Electronic Art (FISEA). The Symposium attracted considerable interest and hundreds of papers and proposals were submitted, of which a selection were accepted. This book, also published as a supplement to the journal Leonardo, publishes 20 of these selected papers under the editorship of Wim van der Plas, Ton Hokken and Johan den Biggelaar. This richly illustrated issue on Electronic Art reflects the enormous international interest which FISEA generated and will further stimulate interest in applications of new technology in music, visual arts and design.

Posthumanism and the Graphic Novel in Latin America Edward King,Joanna Page,2017-07-03 Latin America is experiencing a boom in graphic novels that are highly innovative in their conceptual play and their reworking of the medium. Inventive artwork and sophisticated scripts have combined to satisfy the demand of a growing readership, both at home and abroad. Posthumanism and the Graphic Novel in Latin America, which is the first book-length study of the topic, argues that the graphic novel is emerging in Latin America as a uniquely powerful force to explore the nature of twenty-first century subjectivity. The authors place particular emphasis on the ways in which humans are bound to their non-human environment, and these ideas are productively drawn out in relation to posthuman thought and experience. The book draws together a range of recent graphic novels from Argentina, Brazil, Chile, Mexico and Uruguay, many of which experiment with questions of transmediality, the representation of urban space, modes of perception and cognition, and a new form of ethics for a posthuman world. Praise for Posthumanism and the Graphic Novel in Latin America '...well-referenced and... well considered - the analyses it brings are overall well-executed and insightful...'
