Music, Brain, and Rehabilitation: Emerging Therapeutic Applications and Potential Neural Mechanisms Teppo Särkämö,Eckart Altenmüller,Antoni Rodríguez-Fornells,Isabelle Peretz,2016-08-05 Music is an important source of enjoyment, learning, and well-being in life as well as a rich, powerful, and versatile stimulus for the brain. With the advance of modern neuroimaging techniques during the past decades, we are now beginning to understand better what goes on in the healthy brain when we hear, play, think, and feel music and how the structure and function of the brain can change as a result of musical training and expertise. For more than a century, music has also been studied in the field of neurology where the focus has mostly been on musical deficits and symptoms caused by neurological illness (e.g., amusia, musicogenic epilepsy) or on occupational diseases of professional musicians (e.g., focal dystonia, hearing loss). Recently, however, there has been increasing interest and progress also in adopting music as a therapeutic tool in neurological rehabilitation, and many novel music-based rehabilitation methods have been developed to facilitate motor, cognitive, emotional, and social functioning of infants, children and adults suffering from a debilitating neurological illness or disorder. Traditionally, the fields of music neuroscience and music therapy have progressed rather independently, but they are now beginning to integrate and merge in clinical neurology, providing novel and important information about how music is processed in the damaged or abnormal brain, how structural and functional recovery of the brain can be enhanced by music-based rehabilitation methods, and what neural mechanisms underlie the therapeutic effects of music. Ideally, this information can be used to better understand how and why music works in rehabilitation and to develop more effective music-based applications that can be targeted and tailored towards individual rehabilitation needs. The aim of this Research Topic is to bring together research across multiple disciplines with a special focus on music, brain, and neurological rehabilitation. We encourage researchers working in the field to submit a paper presenting either original empirical research, novel theoretical or conceptual perspectives, a review, or methodological advances related to following two core topics: 1) how are musical skills and attributes (e.g., perceiving music, experiencing music emotionally, playing or singing) affected by a developmental or acquired neurological illness or disorder (for example, stroke, aphasia, brain injury, Alzheimer's disease, Parkinson's disease, autism, ADHD, dyslexia, focal dystonia, or tinnitus) and 2) what is the applicability, effectiveness, and mechanisms of music-based rehabilitation methods for persons with a neurological illness or disorder? Research methodology can include behavioural, physiological and/or neuroimaging techniques, and studies can be either clinical group studies or case studies (studies of healthy subjects are applicable only if their findings have clear clinical implications).

Music Direction for the Stage Joseph Church,2015-01-02 Theater music directors must draw on a remarkably broad range of musical skills. Not only do they conduct during rehearsals and performances, but they must also be adept arrangers, choral directors, vocal coaches, and accompanists. Like a record producer, the successful music director must have the flexibility to adjust as needed to a multifaceted job description, one which changes with each production and often with each performer. In Music Direction for the Stage, veteran music director and instructor Joseph Church demystifies the job in a book that offers aspiring and practicing music directors the practical tips and instruction they need in order to mount a successful musical production. Church, one of Broadway's foremost music directors, emerges from the orchestra pit to tell how the music is put into a musical show. He gives particular attention to the music itself, explaining how a music director can best plan the task of learning, analyzing, and teaching each new piece. Based on his years of professional experience, he offers a practical discussion of a music director's methods of analyzing, learning, and practicing a score, thoroughly illustrated by examples from the repertoire. The book also describes how a music director can effectively approach dramatic and choreographic rehearsals, including key tips on cueing music to dialogue and staging, determining incidental music and underscoring, making musical adjustments and revisions in rehearsal, and adjusting style and tempo to performers' needs. A key theme of the book is effective collaboration with other professionals, from the production team to the creative team to the performers themselves, all grounded in Church's real-world experience with professional, amateur, and even student performances. He concludes with a look at music direction as a career, offering invaluable advice on how the enterprising music director can find work and gain standing in the field.

Body, Sound and Space in Music and Beyond: Multimodal Explorations Clemens Wöllner,2017-04-07 Body and space refer to vital and interrelated dimensions in the experience of sounds and music. Sounds have an overwhelming impact on feelings of bodily presence and inform us about the space we experience. Even in situations where visual information is artificial or blurred, such as in virtual environments or certain genres of film and computer games, sounds may shape our perceptions and lead to surprising new experiences. This book discusses recent developments in a range of interdisciplinary fields, taking into account the rapidly changing ways of experiencing sounds and music, the consequences for how we engage with sonic events in daily life and the technological advancements that offer insights into state-of-the-art methods and future perspectives. Topics range from the pleasures of being locked into the beat of the music, perception-action coupling and bodily resonance, and affordances of musical instruments, to neural processing and cross-modal experiences of space and pitch. Applications of these findings are discussed for movement sonification, room acoustics, networked performance, and for the spatial coordination of movements in dance, computer gaming and interactive artistic installations.
