Information and Communication Technologies for Development Evaluation Oscar A. García,Prashanth Kotturi,2019-07-09 Written by a team of expert practitioners at the Independent Office of Evaluation of International Fund for Agricultural Development (IFAD), this book gives an insight into the implications of new and emerging technologies in development evaluation. Growing technologies such as big data analytics, machine learning and remote sensing present new opportunities for development practitioners and development evaluators, particularly when measuring indicators of the Sustainable Development Goals. The volume provides an overview of information and communication technologies (ICTs) in the context of evaluation, looking at the theory and practice, and discussing how the landscape may unfold. It also considers concerns about privacy, ethics and inclusion, which are crucial issues for development practitioners and evaluators working in the interests of vulnerable populations across the globe. Among the contributions are case studies of seven organizations using various technologies for data collection, analysis, dissemination and learning. This valuable insight into practice will be of interest to researchers, practitioners and policymakers in development economics, development policy and ICT.

Linking Teacher Evaluation and Student Learning Pamela D. Tucker,James H. Stronge,2005-04-15 In *Linking Teacher Evaluation and Student Learning*, researchers Pamela D. Tucker and James H. Stronge show that including measures of student achievement in teacher evaluations can help schools focus their efforts to meet higher standards. You'll see how four school systems have built such measures into their evaluation programs in these distinct ways: * Documenting how desired learning outcomes translated into actual student learning * Tracking progress on key content standards * Setting annual quantifiable goals for students' academic progress * Analyzing changes in students' achievement test scores The authors explore the strengths of each approach, offer insights from teachers and administrators, and describe practical ways to incorporate similar measures of student learning into your own evaluation program. Detailed appendixes provide hands-on tools and resources to help you adapt these approaches to your school's particular needs. For any school that is working to meet higher standards, linking teacher evaluation to measures of student learning is a powerful way to refocus professional development and improve student achievement.

Knowing What Students Know National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Board on Testing and Assessment,Committee on the Foundations of Assessment,2001-10-27 Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments—assessments that help students succeed in school by making as clear as possible the nature of their accomplishments and the progress of their learning. *Knowing What Students Know* essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment—what students know and how well they know it—as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented, and examples are used to illustrate the principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, *Knowing What Students Know* will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.

Early Childhood Assessment National Research Council, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Board on Children, Youth, and Families, Committee on Developmental Outcomes and Assessments for Young Children, 2008-12-21 The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. *Early Childhood Assessment* addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.

 web portal des vergessens ist das mittlerweile fünfte buch von stephan
 bellem und hat diesmal nichts mit kanduras zu tun das buch ist eine
 gesunde Mischung aus klassischer Fantasygeschichte und der Welt des 21
 Jahrhunderts die heikle Gratwanderung zwischen den Dimensionen bzw
 Zeitepochen ist dem Autor bestens gelungen
