Industrial and Engineering Applications or Artificial Intelligence and Expert Systems Takushi Tanaka,Moonis Ali,Setsuo Ohsuga,1997-01-30 This volume includes the proceedings from Proceedings of the Ninth International Conference Fukuoka, Japan, June 4-7, 1996. This work represents a broad spectrum of new ideas in the field of applied artificial intelligence and expert systems, and serves to disseminate information regarding intelligent methodologies and their implementation in solving various problems in industry and engineering.

National Guard U S Government Accountability Office (G,U. S. Government Accountability Office (,2013-07 The Fiscal Year 2002 Defense Authorization Act required GAO to review GuardNet, the National Guard's wide-area network, which is used to support various Defense applications and was used to support homeland security activities after the terrorist attacks of September 11th. GAO was asked to determine the current and potential requirements for GuardNet and the effectiveness of the processes for managing the network's requirements, configuration, and security. The National Guard does not fully know the current or potential requirements for GuardNet or how it is being used, because it has not fully documented requirements. Guard officials provided GAO with a list of applications that the network supports, but they would not attest to the list's completeness, and GuardNet users identified other applications. The processes for managing GuardNet are not effective in three key areas: Requirements: For example, the Guard has not developed a requirements management plan or clearly established users' roles in developing and changing requirements. Configuration: For example, the Guard has not documented the network's configuration and is not controlling changes to configuration components. Security: For example, the Guard has not implemented needed security controls, such as firewalls, to protect GuardNet and does not monitor controls on an ongoing basis to ensure that implemented controls are working as intended. According to Guard officials, establishing these management processes has not been a priority. Without these basic processes, the Guard cannot ensure that GuardNet will perform as intended and provide its users with reliable and secure services. GuardNet is thus a dubious option for further support of critical mission areas such as homeland security.

Geeks, Mush Heads and the IT Revolution Ernst Volgenau,2014-11-14 SRA International grew from one person in his home basement to more than 7,000 people and nearly \$2 billion in revenue in thirty years. The firm was profitable, revenue increased every year, and it became highly admired for its values and culture. SRA was on the Fortune list of 100 Best Places to Work in America for ten consecutive years. The company's initial public offering on the New York Stock Exchange was the sixth most successful in 2002, and the price of its stock soared. Then, at the height of success, the top management team changed twice, growth declined, the firm made a bad acquisition, and the market it served began to decrease. SRA was sold to a private equity firm. The new owners (including the founder and author of this book) hired a dynamic young CEO who implemented changes designed to restore values, culture, and business success. As this account ends, the market was challenging, but the outlook was promising. This book describes the lessons learned through varied phases: startup,

rapid growth, changes in leadership, business problems, privatization; and it explains how high ethics and a sense of service to customers, employees, and society led to a very special company. Its intended audience is business professionals in emerging and established companies and for current and former employees and friends.
