Sports Betting: Law and Policy Paul M. Anderson, Ian S. Blackshaw, Robert C.R. Siekmann, Janwillem Soek, 2011-10-28 Gambling is a significant global industry, which is worth around 0.6% of world trade, that is, around US\$ 384 billion; and gambling on the outcome of sports events is a very popular pastime for millions of people around the world, who combine a bet with watching and enjoying their favourite sports. But, like any other human activity, sports betting is open to corruption and improper influence from unscrupulous sports persons, bookmakers and others. Sports betting in the last ten years or so has developed and changed quite fundamentally with the advent of modern technology – not least the omnipresence of the Internet and the rise of on-line sports betting. This book covers the law and policy on sports betting in more than forty countries around the world whose economic and social development, history and culture are quite different. Several chapters deal with the United States of America. This book also includes a review of sports betting under European Union (EU) Law. The book appears in the ASSER International Sports Law Series, under the editorship of Dr. Robert Siekmann, Dr. Janwillem Soek and Marco van der Harst LL.M.

Contemporary Issues in Sports Economics Wladimir Andreff, 2011-01-01 Written by some of the most prominent scholars in sports economics, this book focuses on issues that have been less investigated in the traditional literature so far. The covered topics range from specific questions of sport governance and sport finance to sport betting. In my view, the collection is a must for all readers seeking to overstep the beaten track. Egon Franck, University of Zurich, Switzerland The development of sports economics has exploded in recent years, and this well-researched and relevant book explores some of the most critical themes. Contemporary Issues in Sports Economics examines topics that have previously received little attention in the literature, such as the determinants and social impacts of sports participation including the link to crime levels. The distinguished authors also discuss some of the less investigated aspects of professional team sports, including: sports betting, financing and governance; the impact of low scoring matches on competitive balance and fan appeal in European football; and the effect on player transfers of a luxury tax on club payrolls in Major League Baseball. This invaluable book will appeal to graduate and postgraduate students in sports economics, sport management and sport sciences, as well as managers and coaches involved with clubs, leagues and federations. Sports participants, fans, bookmakers and bettors will also find much to interest them in this unique and insightful study.

**Teaching Statistics** Andrew Gelman, Deborah Nolan, 2002-08-08 Students in the sciences, economics, psychology, social sciences, and medicine take introductory statistics. Statistics is increasingly offered at the high school level as well. However, statistics can be notoriously difficult to teach as it is seen by many students as difficult and boring, if not irrelevant to their subject of choice. To help dispel these misconceptions, Gelman and Nolan have put together this fascinating and thought-provoking book. Based on years of teaching experience the book provides a wealth of demonstrations, examples and projects that involve active student participation. Part I of the book presents a large selection of activities for introductory statistics courses and combines chapters such as, 'First week of class', with exercises to break the ice and get students talking; then 'Descriptive statistics' , collecting and displaying data; then follows the traditional topics - linear regression, data collection, probability and inference. Part II gives tips on what does and what doesn't work in class: how to set up effective demonstrations and examples, how to encourage students to participate in class and work effectively in group projects. A sample course plan is provided. Part III presents material for more advanced courses on topics such as decision theory, Bayesian statistics and sampling.

Information Science David G. Luenberger, 2012-01-12 From cell phones to Web portals, advances in information and communications technology have thrust society into an information age that is far-reaching, fast-moving, increasingly complex, and yet essential to modern life. Now, renowned scholar and author David Luenberger has produced Information Science, a text that distills and explains the most important concepts and insights at the core of this ongoing revolution. The book represents the material used in a widely acclaimed course offered at Stanford University. Drawing concepts from each of the constituent subfields that collectively comprise information science, Luenberger builds his book around the five E's of information: Entropy, Economics, Encryption, Extraction, and Emission. Each area directly impacts modern information products, services, and technology--everything from word processors to digital cash, database systems to decision making, marketing strategy to spread spectrum communication. To study these principles is to learn how English text, music, and pictures can be compressed, how it is possible to construct a digital signature that cannot simply be copied, how beautiful photographs can be sent from distant planets with a tiny battery, how communication networks expand, and how producers of information products can make a profit under difficult market conditions. The book contains vivid examples, illustrations, exercises, and points of historic interest, all of which bring to life the analytic methods presented: Presents a unified approach to the field of information science Emphasizes basic principles Includes a wide range of examples and applications Helps students develop important new skills Suggests exercises with solutions in an instructor's manual
