FREDHOLM,2010-09-22 In the present volume of the Handbook of Experimental Pharmacology well known experts describe the actions of different xanthines with a focus on caffeine and theophylline. A special chapter is devoted to theobromine, an active component of chocolate, the actions of which are less well characterized. This book also presents the pharmacology of one xanthine derivative, propentofylline, as an example of a xanthine that has gone through extensive development for a novel therapeutic area.

 [2] [MEDICINAL PLANTS](#) Halina Maria Ekiert,Kishan Gopal Ramawat,Jaya Arora,2021-09-01 Medicinal plant research is an evergreen subject. There is a tremendous increase in popularity of herbal medicine in traditional medicine, ethnomedicine, modern medicine and as over the counter food supplements. Even after this increased demand, supply is neither uniform nor assured as most of these plants are collected from wild. In developing countries of tropical and subtropical regions where majority of herbal drugs are produced, this is not organised sector making it vulnerable to several malpractices, hence standardization of all aspects required. This has also negative impact on biodiversity and conservation of plants as well as supply of uniform material. This book is aimed to provide up to date information about sustainable use of selected medicinal plants, their active ingredients and efforts made to domesticate them to ensured uniform supply. Development of agrotechnology, biotechnology and cultivation practices using conventional and non-conventional methods are presented. Where these efforts will lead the medicinal plant research and future perspective are discussed. The chapters are written by well recognised group leaders in working in the field. The book contains topics on general biology of medicinal plants, their sustainable use and, cultivation and domestication efforts. A uniform chapter structure has been designed to keep consistency. The book will be useful for academicians, agriculturists, biotechnologists and researcher, and industries involved in manufacturing herbal drugs and supplementary products.

 [2] [CAPITALISM AND ITS ECONOMICS](#) Douglas Dowd,2004-07-20 This classic book is an ideal introduction to economic thought and the dominance of capitalism, ideal for students of economic theory and history. Now thoroughly revised and updated, this new edition includes a new preface and an additional chapter by the author. Analysing the relationship between economic thought and capitalism from 1750 to the present, Douglas Dowd examines the dynamic interaction of two processes: the historical realities of capitalism and the evolution of economic theory. He demonstrates that the study of economics celebrates capitalism in ways that make it necessary to classify economic science as pure ideology. A thoroughly modern history, this book shows how economics has become ideology. A radical critic of capitalism, Dowd surveys its detrimental impact across the globe and throughout history. The book includes biographical sketches and brief analyses of the major proponents and critics of capitalism throughout history, including Adam Smith, Thomas Malthus, Jeremy Bentham, John Stuart Mill, Karl Marx, Thorstein Veblen, Rosa Luxemburg, John Maynard Keynes, Paul Samuelson, Milton Friedman, and Eric Hobsbawm.

 [2] [CONTRACTS FOR INFRASTRUCTURE PROJECTS](#) Philip Loots,Donald Charrett,2022-05-18 Contracts for Infrastructure Projects: An International Guide provides a guide to the law relating to construction contracts for infrastructure projects; it is intended for the use of engineers and other professionals who are involved in the negotiation and administration of construction contracts, to enable them to understand the risks involved, and how to minimise them. The principles of construction law outlined in this book apply to small construction contracts as well as very large contracts for which the contract sum may be in the billions of dollars. The focus of the book is on construction contracts entered into by commercial organisations operating in a business environment. Contract law generally assumes that such parties are of equal bargaining power and puts relatively few fetters on their ability to agree on the terms of their bargain. However, where legislation impacts on the execution of construction projects or the operation of construction contracts it may be of major importance in protecting the rights of weaker parties or third parties. It is assumed that the users of this book will be familiar with the general concepts of tendering and contracting for engineering and construction projects but may not have any formal knowledge of the law. To the extent possible, the emphasis is on general principles of contract law that are widely accepted in many jurisdictions. Examples are drawn from case law in a number of common law jurisdictions, as well as from civil codes.
