People Fishing Barbara Levine, Paige Ramey, 2018-04-17 Although people have fished for food since the dawn of time, fishing today is one of the most popular pastimes in the world—an estimated 220 million people worldwide are recreational anglers, according to the World Bank. While many enjoy the Zen of waiting patiently for a strike in the great outdoors, for others, at least judging from this quirky collection of fishermen and women fishing is clearly a time of great fun, even hilarity. In this follow-up to her delightful People

Knitting, photo archivist and collector Barbara Levine, along with Paige Ramey, netted these curious, humorous, and sometimes outrageous photos of Edwardian dowagers, tiny babies, sunburned sportsmen, and bathing beauties preparing tackle boxes, casting their lures, and displaying the catch of the day. A tribute to this perennial outdoor pastime, this is the perfect gift for the fisher in your life.

Photo-Driven Seawater Splitting for Hydrogen Production Xiao-Yu Yang, 2023-04-29 This book presents photo-driven seawater splitting technologies for hydrogen production. This technology is considered as a win-win interplay for both the utilization of solar energy as the most renewable energy and seawater as the most hydrogen source. The book also discusses topics from raw materials selection, characterization and mechanistic insights to the latest research developments in response to the need for environmentally friendly and low-carbon industries. In addition, it provides

insights into a most attractive energy-conversion and storage cascade by combining solar energy and a hydrogen system. Given its scope, this book appeals to a broad readership, particularly professionals at universities and scientific research institutes, as well as practitioners in industry.

Photo- and Electrochemical Water Treatment Professor Halan Prakash, Dr Rita S Dhodapkar, Professor Kevin McGuigan, 2022-12-21 Globally, 2.1 billion people live without access to safe water, and about 159 million people collect their drinking water directly from surface water sources. This issue is particularly prominent in water-stressed areas, such as India, which has a rural population of around 700 million, 63 million of whom do not have access to clean water. Contaminants of Emerging Concern (CECs), of both a chemical and biological nature, are increasingly being detected in wastewater effluents around the world. Chemical CECs include pollutants such as pharmaceuticals and personal care products, pesticides, hormones, and endocrine disruptors, and biological CECs include antibiotic resistant bacteria, pathogenic protozoans, and viruses. New technologies to remove the contaminants from water are urgently needed and photochemical approaches offer an exciting array of possibilities. Covering chemical analysis, molecular biology methods and computational approaches important for the elucidation of mechanisms and evaluation of photochemical processes, this book presents

advanced photochemical processes for the removal of CECs from water. Readers will find chapters on advanced photochemical treatment prototypes and pilot plants, and discussions on translation from lab to field-scale implementation. Examples include highly transparent materials, integrated membranes, adsorbents, and photocatalysts for enhancing the photochemical processes by direct sunlight induced reactions, photo-Fenton, and photo-electrochemical reactions. Discussing both the advantages and disadvantages of these technologies, this book is a great resource both for academics researching photocatalytic processes and for water treatment professionals.

Water Photo- and Electro-Catalysis Shaohua Shen, Shuangyin Wang, 2024-02-21
Water Photo- and Electro-Catalysis Introduce yourself to the cutting-edge processes of water photo- and electro-catalysis with this important guide Photocatalysis and electrocatalysis reactions involving water are becoming an increasingly important component of energy and sustainability research. Water electrocatalysis and photo-electrocatalysis promise to have a significant impact on human energy production and its by-products, and to play a substantial role in solutions to global energy and environmental crises. Familiarity with these processes will be critical for sustainable energy production in the coming years. Water Photo- and Electro-Catalysis provides a detailed and readable introduction to these processes and their attendant technologies. It covers mechanisms, materials, and devices that catalyze water-based energy conversion, as well as introducing the theoretical principles that are driving the development of new technologies in this area. The result is an essential book for researchers and materials scientists in a range of fields. Water Photo- and Electro-Catalysis readers will also find: An editorial team with

decades of combined experience in energy and materials science research Detailed treatment of electrocatalysis processes for hydrogen evolution (HER), oxygen/hydrogen peroxide evolution (OER/HPER), and more Analysis of mechanisms including heterogenous vs. homogenous photocatalysis, electrodes-based photo-electrocatalysis, and photovoltaic-electrocatalysis Water Photo- and Electro-Catalysis is a valuable reference for catalytic chemists, materials scientists, energy chemists, and all research and industry professionals in photo(electro)catalysis and sustainable energy fields.

Master Low Light Photography Heather Hummel, 2016-06-20 Most photographers shoot in abundant sunlight. The problem is, full sun creates harsh, unflattering shadows that undermine images. Working in low light — in early morning or at twilight or when Mother Nature cues the clouds or fans in the fog — can help photographers produce stand-out images. Photographers will learn to analyze light and determine the best camera settings for creating captivating low-light images outdoors. Composition—the artful arrangement of all of the image elements — is detailed next. From there, Hummel provides text and illustrations to guide readers through the art of producing low-light images of sunrises and sunsets; the moon and stars; hot air balloons, city lights, and fireworks; and nature and landscape photography. Hummel then moves on to discuss how photographers can use filters and camera-stabilizing tools to enhance the technical quality of their shots. Armed with the applications outlined in this book, photographers will be able to produce outstanding shots during off-peak hours.

Solar Photo Rates for Planetary Atmospheres and Atmospheric Pollutants W.F.

Huebner, J.J. Keady, S.P. Lyon, 2013-03-09 A quantitative measure of the accuracy of the rate coefficients and the excess energies is a desirable goal of this analysis. There are two major sources of uncertainties: The atomic and molecular data and the solar irradiance. The cross sections and branching ratios used in this analysis come from many different sources; many of them without any error indications. For this reason, we must confine ourselves to a qualitative indication of the reliability of the results. Specifically we give a quality scale in Table II for the data of each mother molecule; A indicating the highest quality of atomic and molecular data and F the lowest quality. The letter B typically means that the threshold is uncertain. For most molecules the cross section at threshold is very small and the rate coefficient for these molecules is therefore not influenced by this

uncertainty. For atomic species the cross section is usually large near threshold, but for these species the threshold is known quite accurately. The letter B, therefore, indicates that the rate coefficient is most likely quite accurate, but the excess energy is less accurately known. The letter C usually means that the branching ratios are not well known. This means that the total rate coefficient is very good, but the rate coefficients and the excess energies for the individual branches are less accurate.
