Sustainable Natural Hazard Management in Alpine Environments Eric Veulliet, Stötter Johann, Hannelore Weck-Hannemann, 2009-10-03 In the recent past a marked increase of the damages caused by natural hazard processes has been documented, for example by the Munich Re-Insurance. On a regional scale, a similar development can be observed in mountain regions such as the Alps, where it is particularly a rise in flood events that has caused the maximum amount of economic damage. Three major aspects may help to explain this phenomenon: The changing frequency-magnitude relationship of the natural hazard processes, the multiplication of the damage potential due to the socio-economic change, and the non-adequate way of coping with the changing risk by the official authorities. As a consequence, this book tries to address key questions related to these developments and to give answers to these problems. Question 1: How can the strategies for coping with the rise in extreme flooding be improved? Question 2: How can the damage potential and other socio-economic aspects be quantified? Question 3: How can new computer based technologies contribute to minimizing the risks related to alpine natural hazards? An initial chapter gives an overview of the global change aspects of natural hazards and their related risks. While three chapters outline answers to question 1, four chapters discuss question 2. Five chapters give examples of new technologies.

Flood Hazard Management: British and International Perspectives John W Handmer, 1987-06-30 In some important respects floodplain management and flood hazard research is different in Britain from that in other countries. This collection of papers from a conference provides some comparisons. It covers urban flooding, institutions and policy, land use policy, hazard response, and project appraisal and risk assessment.

Risk and Hazard Management for Festivals and Events Peter Wynn-Moylan, 2017-09-07 Events of all types are produced every day for all manner of purposes, attracting all sorts of people. To provide a safe and secure setting in which people gather is imperative. Event risk and hazard management must be fully integrated into all event plans and throughout the event management process. Hazard management is the planning process required for the effective management of potential adverse incidents and areas of uncertainty. It involves intensive, detailed planning and cooperation to apply control systems to minimise hazards associated with venues, outdoor sites, work procedures, facilities, equipment and crowds of spectators. It involves planning for emergencies and security, and compliance with legal constraints and requirements. Risk and Hazard Management for Festivals and Events provides students with a comprehensive, fully integrated planning and management mechanism that can be applied to events of all types and size. The Event Safety Management System provides guidelines and processes for proactive methods to identify, assess and control hazardous conditions and practices. The system incorporates design of festival venues and sites, and unites the operational functions of crowd control, communications, security, terrorism prevention processes and emergency response protocols. Explanation of the causes of crowd disasters and studies into crowd behaviour are supported with international case studies. Written in an accessible, practical way, this book is essential reading for all events students and event managers.

Fundamentals of Enterprise Risk Management John Hampton, 2014-12-03 One thing that will never change about the business world is the presence of risk. But risk management has changed dramatically since the 2008 financial crisis. . . and new developments in technology and communications demand up-to-the-minute approaches for defending against threats-and seizing opportunities. Extensively updated, the second edition of Fundamentals of Enterprise Risk Management examines the latest technologies such as Riskconnect and High Tech Electronic Platform (HTEP), and helps readers recognize both internal and external exposures, understand crucial concepts such as risk mapping and risk identification, and align risk opportunities with their organization's business model. Packed with practical exercises and fresh case studies from organizations such as IBM, Microsoft, Apple, JPMorgan Chase, and Sony-as well as new material on topics including the new role of Risk Owner, cutting-edge collaboration methods, and the upside of risk-this critical guide provides readers with the tools and information they need to keep their organizations as blissfully risk-free as possible.

Risk and Security Management Michael Blyth, 2008-07-23 Learn to measure risk and develop a plan to protect employees and company interests by applying the advice and tools in Risk and Security Management: Protecting People and Sites Worldwide. In a world concerned with global terrorism, instability of emerging markets, and hazardous commercial operations, this book shines as a relevant and timely text with a plan you can easily apply to your organization. Find a series of strategic to granular level policies, systems, and concepts which identify and address risk, enabling business to occur in a manner which best protects you and your company.

Introduction to Hazard Control Management James T. Tweedy, 2013-09-25 The International Board for the Certification of Safety Managers (IBFCSM) has designated this text as the Primary Study Reference for those preparing to sit for the Certified Hazard Control Manager (CHCM) and the Certified Hazard Control Manager-Security (CHCM-SEC) Examinations. Introduction to Hazard Control Management: A Vital Organizational Function explains how proven management and leadership principles can improve hazard control and safety management effectiveness in organizations of all types and sizes. This introductory text addresses hazard control and safety management as organizational functions, instead of just programs. It not only supplies a broad overview of essential concepts—including identifying, analyzing, and controlling hazards—but also promotes the importance of safe behaviors. Written by the Executive Director of IBFCSM, the book covers a broad array of hazards that can exist in most organizations. It focuses on the need to use good leadership, effective communication, and proven management techniques to prevent organizational losses. Addresses the inter-relationships of various organizational functions that support hazard control, accident prevention, and safety Includes an overview of emergency management, hazardous materials, and fire safety management Reviews occupational health, radiation safety, and emerging hazards such as nanotechnology and robotic safety Emphasizing the importance of effective communication skills in hazard control efforts, this book promotes an understanding of system safety methodologies and organizational culture to help you control hazards, prevent accidents, and reduce other losses in your organization. It expands on the foundational principles contained in the pamphlet: The Management Approach to Hazard Control. This book is an ideal reference for anyone wanting to learn more about managing hazards, encouraging safe behaviors, and leading hazard control efforts.

The Innovation Systems Cycle H. James Harrington, Frank Voehl, 2019-09-26 Currently, the prime focus for US business plans should not be on the manufacturing process design and delivery processes, but on greatly improving innovation leadership, design engineering capability, and sales and marketing innovation. These three areas have been sadly lacking significant performance improvement during the past 20 years. The magic word for US business is simplification. Most of the books written to date focus on the solution development aspect of the Innovation System Cycle, which is less than 15% of the total innovative system. Focusing on solution development is only the start -- the rest of the innovation system cycle is what turns an idea into a profitable business. The techniques in this book are directed at key tasks across the innovative process, such as maximizing quality, productivity, maintainability, usability, and reliability, while focusing on reducing the product cycle time and costs within the innovative process. This book uses more than 50 different approaches/concepts, which leads the reader in a very simple method for understanding, establishing, and effectively using an innovative system to provide a significant marketing advantage. Previous books have focused on what to do; however, this book focuses on how to do it. It transforms a complicated complex system into easy-to-use and understand methodology.

Major Accidents to the Environment Ivan Vince, 2011-04-08 If our plant catches fire, when should it be allowed to burn down to prevent pollution? When does enforcement turn into prosecution, following an environmental accident? Will our environmental insurance cover the costs of remediation? This book provides a thorough and practical guide to the environmental aspects of compliance with the Seveso II Directive and COMAH regulations and surrounding issues. It guides readers through the technical, legal and insurance related complexities unique to the environmental aspects of Seveso II/COMAH. Individual chapters and sections written by relevant experts explain the implications of the Directive/Regulations and other laws that relate to major accident hazards. Valuable case studies underpin and illuminate the arguments presented. The comprehensive appendices contain a wealth of further case studies as well as focused supporting information on environmental design, assessment and management of major hazard installations, for safety, prevention and environmental professionals, risk assessors, insurers, managers and their legal advisors. Dr Ivan Vince is Director of ASK Consultants and co-founder of one of the first industrial risk consultancies in Eastern Europe. He has investigated several environmental accidents. Coping with Natural Hazards Khadg Singh Valdiya, 2004 This book is a collection of twenty one papers presented during the symposium on Coping with Natural Hazards at University of Pune on 5 and 6 October 2001. This very successful symposium, organised by the National Academy of Sciences, outlined the strategies our country should adopt to be prepared to face hazards like earthquakes, floods, landslides, avalanches, cyclones, droughts and desertification. It contains papers by pre-eminent scientists and leading lights like Professors M G K Menon, P K Das, D R Sikka and R K Bhandari and many others. Each paper has been critically reviewed by at least two experts in their respective fields.

Managing Operational Risk Douglas Robertson, 2016-02-23 Operational risk is the risk of loss from inadequate or failed internal processes, people, and systems or from external events. This book explores the different types of operational risk that threaten financial institutions, and focuses on practical due-diligence methodologies that can be used to identify these risks before it is too late.

Cyber Security Management Peter Trim, Yang-Im Lee, 2016-05-13 Cyber Security Management: A Governance, Risk and Compliance Framework by Peter Trim and Yang-Im Lee has been written for a wide audience. Derived from research, it places security management in a holistic context and outlines how the strategic marketing approach can be used to underpin cyber security in partnership arrangements. The book is unique because it integrates material that is of a highly specialized nature but which can be interpreted by those with a non-specialist background in the area. Indeed, those with a limited knowledge of cyber security will be able to develop a comprehensive understanding of the subject and will be guided into devising and implementing relevant policy, systems and procedures that make the organization better able to withstand the increasingly sophisticated forms of cyber attack. The book includes a sequence-of-events model; an organizational governance framework; a business continuity management planning framework; a multi-cultural communication model; a cyber security management model and strategic management framework; an integrated governance mechanism; an integrated resilience management model; an integrated management model and system; a communication risk management strategy; and recommendations for counteracting a range of cyber threats. Cyber Security Management: A Governance, Risk and Compliance Framework simplifies complex material and provides a multi-disciplinary perspective and an explanation and interpretation of how managers can manage cyber threats in a pro-active manner and work towards counteracting cyber threats both now and in the future.

Ground Engineering - Principles and Practices for Underground Coal Mining J.M. Galvin, 2016-02-02 This book teaches readers ground engineering principles and related mining and risk management practices associated with underground coal mining. It establishes the basic elements of risk management and the fundamental principles of ground behaviour and then applies these to the essential building blocks of any underground coal mining system, comprising excavations, pillars, and interactions between workings. Readers will also learn about types of ground support and reinforcement systems and their operating mechanisms. These elements provide the platform whereby the principles can be applied to mining practice and risk management, directed primarily to bord and pillar mining, pillar extraction, longwall mining, sub-surface and surface subsidence, and operational hazards. The text concludes by presenting the framework of risk-based ground control management systems for achieving safe workplaces and efficient mining operations. In addition, a comprehensive reference list provides additional sources of information on the subject. Throughout, a large variety of examples show good and bad mining situations in order to demonstrate the application, or absence, of the established principles in practice. Written by an expert in underground coal mining and risk management, this book will help students and practitioners gain a deep understanding of the basic principles behind designing and conducting mining operations that are safe, efficient, and economically viable. Provides a comprehensive coverage of ground engineering principles within a risk management framework Features a large variety of examples that show good and poor mining situations in order to demonstrate the application of the established principles in practice Ideal for students and practitioners About the author Emeritus Professor Jim Galvin has a relatively unique combination of industrial, research and academic experience in the mining industry that spans specialist research and applied knowledge in ground engineering, mine management and risk management. His career encompasses directing ground engineering research groups in South Africa and Australia; practical mining experience, including active participation in the mines rescue service and responsibility for the design, operation, and management of large underground coal mines and for the consequences of loss of ground control as a mine manager; appointments as Professor and Head of the School of Mining Engineering at the University of New South Wales; and safety advisor to a number of Boards of Directors of organisations associated with mining. Awards Winner of the ACARP Excellence Research Award 2016. The Australian Coal Industry's Research Program selects recipients to receive ACARP Research and Industry Excellence Awards every two years. The recipients are selected on the recommendation of technical committees. They are honored for achievement of a considerable advance in an area of importance to the Australian coal mining industry. An important criterion is the likelihood of the results from the project being applied in mines. Winner of the Merv Harris Award from the Mine Managers Association of Australia. The Merv Harris Award is named for Merv Harris who donated money to be invested for a continuing award in 1988. With the award, the Mine Managers Association of Australia honors members of the Association who demonstrate technical achievement in the Australian Coal Mining Industry. The first award was granted in 1990, since then, only two people have received this honor. The book has received the following awards.... AGS (Australian Geomechanics Society) congratulates Dr Galvin for these awards
