Pamphlet Architecture 1-10 Steven Holl, 1998-03 Pamphlet architecture was initiated in 1977 as an independent vehicle to criticize, question and exchange views. Each issue is assembled by an individual author/architect.

They All Fall Down Richard Cahan, 1994-09-01 Richard Nickel, whom I had the delight of knowing during his all too brief life, is one of the unsung heroes of Chicago architecture. He was not an architect himself, nor a designer. He simply took pictures, but what pictures! He was, for want of a better description, one of the most sensitive of architectural photographers. More than that, his life--and ironically, tragically and poetically, his death--were fused to Chicago architecture. How he died tells us how he lived: for the beauty in the works of Sullivan, Wright and the others. His story is one that must be told. --Studs Terkel, author He was completely understanding of architecture and genius and of the quality of the work he was dealing with. He was single-minded in his pursuit and dedication to quality in history, art and architecture. That is an increasingly rare quality. --Ada Louise Huxtable, former New York Times architecture critic Richard was an excellent photographer--sensitive and intelligent, and a very good craftsman. --John Szarkowski, former Director, Photography, Museum of Modern Art, New York Richard Nickel was one of those who saw architecture, and who passionately and skillfully pursued its portrayal. He was one of a very small number, and to make his work known would be a fundamental service to architects, students, and teachers as well as to the art of architecture. --Edgar Kaufmann, Jr., architectural historian

Architectural Technology Stephen Emmitt, 2009-02-12 This core textbook brings together for the first time the technical, legal, social and philosophical issues under the umbrella of architectural technology. Part 1 covers the influences that affect the way we build - the environmental agenda, the human factors, buildability, time and costs. Part 2 takes the reader through the life of a typical building project - from briefing, through design and assembly, to use and eventual disassembly. Part 3 tackles some of the underlying issues facing the architectural technologist - from the communication of details to technological innovation. Architectural Technology bridges the knowledge gap between design and construction, enabling the architectural technologist to apply their unique skill in a creative and innovative way. As a textbook aimed at those studying for membership of BIA this is clearly very thorough and has the recommendation of their Vice President Education. However, it can also justifiably earn its place on the bookshelf of anybody involved in the construction process as a reference and to aid an understanding of others he/she will be working with to develop an environment of which to be proud. Building Engineer, July 2002

Forming and Centering Kenneth M. Moffett, 2017-03-22 In this book a fresh look at the central issues of architecture is assembled and recast into a fully integrated narrative, based on two foundational and complementary aspects of architectural design: those that give shape and those that give focus--forming and centering.

Details in Architecture 5 Joe Boschetti, 1999 Architectural detailing makes a design stand apart from all other buildings, and also makes an architect truly outstanding. Each volume has become a study of the emerging trends in

architectural detailing, with a strong focus on sustaining the environment, green architecture and many aspects of cross-cultural design. Featuring the world's most highly acclaimed architects, this book presents many the world's most recently completed and influential building designs for corporate, government, transport and infrastructure, public spaces, landscape architecture, hospitality, residential, sports and leisure, convention and conference, art and exhibition. Architects featured are from Europe, the United States, Australia, Asia and South America.

Unified Architectural Theory Nikos Angelos Salingaros, 2013-04-20 Here is a synthesis that makes sense of buildings from all ages: historical, vernacular, to cutting-edge architectural creations. This book of lectures and essays cuts through the often-incomprehensible fog of contemporary architectural discourse to reveal theoretical foundations for design. Much of the material was developed as part of a course introducing scientific thinking into architecture, and actually estimating factors that contribute to the success of a building--Author's webpage.

Architecture from Commission to Construction Jennifer Hudson, 2012-08-20 This book provides an in-depth study of the design and construction processes behind 25 leading contemporary buildings. Covering a broad range of international projects, the book illustrates the working methods and creative concerns of both long-established and emerging international architects. Every stage of each project is included, from the demands of the original brief, through early sketches and design development to investigation of building regulations and collaboration with engineers, contractors, builders and clients. Each project is presented through an explanatory overview, sketches, details, CAD renderings, models and construction shots, all captioned in great technical detail. Architecture from Commission to Construction offers both students and professional architects an inspiring and informative overview of how today's major architectural projects are designed and built.

Louis Sauer, The Architect of Low-rise High-density Housing Antonino Saggio, 2012-08-21 ... As one walks the streets of the Philadelphia, Sauer's buildings stand out for the masterly way he calibrates architectural composition and the varied playfulness of his solutions which, through a complex body of intuitively defined rules, one will find the very essence of Sauer's field of action where he interprets the reality of the setting and its surroundings. This book, then, is an enjoyable, lively read, because it proposes a profoundly democratic architecture that opens individuals' minds, leaves room to the end-user's aesthetic sensibility and presupposes a curious, imagining heart... From the Preface by P. C. Pignatelli L. Sauer, born 1928, FAIA, Hon FRAIA, is an architect, professor and design theorist. Extensive projects have been built in the U.S.A. and Canada where his work is

an example of planning and design originality. A. Saggio (1955) teaches Architecture at «Sapienza» University (Rome). He is the founder of the book series The IT Revolution in Architecture.

Experiencing Architecture, second edition Steen Eiler Rasmussen, 1964-03-15
A classic examination of superb design through the centuries. Widely regarded as a classic in the field, Experiencing Architecture explores the history and promise of good design. Generously illustrated with historical examples of designing excellence—ranging from teacups, riding boots, and golf balls to the villas of Palladio and the fish-feeding pavilion of Beijing's Winter Palace—Rasmussen's accessible guide invites us to appreciate architecture not only as a profession, but as an art that shapes everyday experience. In the past, Rasmussen argues, architecture was not just an individual pursuit, but a community undertaking. Dwellings were built with a natural feeling for place, materials and use, resulting in “a remarkably suitable comeliness.” While we cannot return to a former age, Rasmussen notes, we can still design spaces that are beautiful and useful by seeking to understand architecture as an art form that must be experienced. An understanding of good design comes not only from one's professional experience of architecture as an abstract, individual pursuit, but also from one's shared, everyday experience of architecture in real time—its particular use of light, color, shape, scale, texture, rhythm and sound. Experiencing Architecture reminds us of what good architectural design has accomplished over time, what it can accomplish still, and why it is worth pursuing. Wide-ranging and approachable, it is for anyone who has ever wondered “what instrument the architect plays on.”

Introducing Architectural Theory Korydon Smith, Miguel Guitart, 2013-05-20
This is the most accessible architectural theory book that exists. Korydon Smith presents each common architectural subject – such as tectonics, use, and site – as though it were a conversation across history between theorists by providing you with the original text, a reflective text, and a philosophical text. He also introduces each chapter by highlighting key ideas and asking you a set of reflective questions so that you can hone your own theory, which is essential to both your success in the studio and your adaptability in the profession. These primary source texts, which are central to your understanding of the discipline, were written by such architects as Le Corbusier, Robert Venturi, and Adrian Forty. The appendices also have guides to aid your reading comprehension; to help you write descriptively, analytically, and disputationally; and to show you citation styles and how to do library-based research. More than any other architectural theory book about the great thinkers, Introducing Architectural Theory teaches you to think as well.

Narrative Architecture Nigel Coates, 2012-03-26 The first book to look architectural narrative in the eye Since the early eighties, many architects have used the term narrative to describe their work. To architects the

enduring attraction of narrative is that it offers a way of engaging with the way a city feels and works. Rather than reducing architecture to mere style or an overt emphasis on technology, it foregrounds the experiential dimension of architecture. Narrative Architecture explores the potential for narrative as a way of interpreting buildings from ancient history through to the present, deals with architectural background, analysis and practice as well as its future development. Authored by Nigel Coates, a foremost figure in the field of narrative architecture, the book is one of the first to address this subject directly. Features architects as diverse as William Kent, Antoni Gaudí, Eero Saarinen, Ettore Sottsass, Superstudio, Rem Koolhaas, and FAT to provide an overview of the work of NATO and Coates, as well as chapters on other contemporary designers. Includes over 120 colour photographs. Signposting narrative's significance as a design approach that can aid architecture to remain relevant in this complex, multi-disciplinary and multi-everything age, Narrative Architecture is a must-read for anyone with an interest in architectural history and theory.
