A New Algorithm for Improving Basic Model Based Foreground Detection Using Neutrosophic Similarity Score Keli Hu,En Fan, Foreground detection is a task for detecting the moving objects in the scene like in video surveillance. Several basic background models are often used due to their high efficiency. However, their results are not good when there exists noisy information generated by the bad weather, camera jitter, etc. Neutrosophic set (NS) is as a new branch of philosophy dealing with the origin, nature and scope of neutralities. It has an inherent ability to handle the indeterminant information like the noise included in images and video sequences.

Huntington's Disease Nagehan Ersoy Tunalı,2017-03-22 Huntington's disease is a progressive neurodegenerative disorder of the brain. It is one of the quite devastating and currently incurable human conditions. Degeneration of specific types of neurons in the brain results in a triad of clinical features: serious behavioral disturbances, uncontrolled movements of body parts, and deterioration of intellectual capabilities. The underlying complex mechanisms and molecular players of the cellular cascades still need to be deciphered in detail despite considerable advances. Once solved, the related molecular mechanisms will not only enlighten the HD story but will also shed light on other polyglutamine diseases and similar brain disorders. This book, Huntington's Disease-Molecular Pathogenesis and Current Models, is planned to cover recent scientific achievements in understanding the cellular mechanisms of HD. The chapters provide comprehensive description of the key issues in HD research. In this regard, this book will serve as a source for clinicians and researchers in the field and also for life science readers in increasing their understanding and awareness of the clinical correlates, genetic aspects, neuropathological findings, and potential therapeutic interventions related to HD.

High-Quality Visual Experience Marta Mrak,Mislav Grgic,Murat Kunt,2010-09-08 Last few years have seen rapid acceptance of high-definition television (HDTV) technology around the world. This technology has been hugely successful in delivering more realistic television experience at home and accurate imaging for professional applications. Adoption of high definition continues to grow as consumers demand enhanced features and greater quality of content. Following this trend, natural evolution of visualisation technologies will be in the direction of fully realistic visual experience and highly precise imaging. However, using the content of even higher resolution and quality is not straightforward as such videos require significantly higher access bandwidth and more processing power. Therefore, methods for radical reduction of video bandwidth are crucial for realisation of high visual quality. Moreover, it is desirable to look into other ways of accessing visual content, solution to which lies in innovative schemes for content delivery and consumption. This book presents selected chapters covering technologies that will enable greater flexibility in video content representation and allow users to access content from any device and to interact with it.
