The Art and Science of HDR Imaging John J. McCann, Alessandro Rizzi, 2011-10-04 Rendering High Dynamic Range (HDR) scenes on media with limited dynamic range began in the Renaissance whereby painters, then photographers, learned to use low-range spatial techniques to synthesize appearances, rather than to reproduce accurately the light from scenes. The Art and Science of HDR Imaging presents a unique scientific HDR approach derived from artists' understanding of painting, emphasizing spatial information in electronic imaging. Human visual appearance and reproduction rendition of the HDR world requires spatial-image processing to overcome the veiling glare limits of optical imaging, in eyes and in cameras. Illustrated in full colour throughout, including examples of fine-art paintings, HDR photography, and multiple exposure scenes; this book uses techniques to study the HDR properties of entire scenes, and measures the range of light of scenes and the range that cameras capture. It describes how electronic image processing has been used to render HDR scenes since 1967, and examines the great variety of HDR algorithms used today. Showing how spatial processes can mimic vision, and render scenes as artists do, the book also: Gives the history of HDR from artists' spatial techniques to scientific image processing Measures and describes the limits of HDR scenes, HDR camera images, and the range of HDR appearances Offers a unique review of the entire family of Retinex image processing algorithms Describes the considerable overlap of HDR and Color Constancy: two sides of the same coin Explains the advantages of algorithms that replicate human vision in the processing of HDR scenes Provides extensive data to test algorithms and models of vision on an accompanying website www.wiley.com/go/mccannhdr

HDR Photography Richard Jones, 2011 HDR Photography 'Art In Urban Exploration' By Richard Jones is a PHOTOGRAPHY PICTURE BOOK of abandon architecture, unusual locations, objects & street art. If you are interested in HDR Photography or urban exploration then this book serves as inspiration. Artist Excerpt: Photography for me is a kind of story telling. I feel that not only do people have stories to share, places and objects also contain a hidden memory, the emotion somewhat personally introspective of ones self. To me abandoned places and objects are in a kind of waiting limbo, the beauty in decay occasionally accented by the colours of graffiti contain moods that I feel HDR (High Dynamic Range) photography accentuates with surreal, hyper realistic renditions. My intention is to share these photographs with you to respectfully ad remembrance to these moments of limbo and the beauty they contain.

The Color Management Handbook for Visual Effects Artists Victor Perez, 2023-09-28 Victor Perez brings together the research and expertise of world-leading color scientists to create a comprehensive guide for visual effects (VFX) artists in color management. This book explores the latest standards of high dynamic range (HDR) and Academy Color Encoding System (ACES) workflows, in an easily digestible and widely applicable resource. Its purpose is to make artists confident and familiar with Color Management and its science, to improve the quality of visual effects worldwide. Without assuming any previous knowledge, this self-contained book builds the reader's understanding from the ground up, exploring all the elements of the color workflow at a scientific level. It covers how to set up a consistent pipeline in relation to other departments, inside and outside visual effects, from camera to screen, so everybody is aligned to the same standards, preserving color qualities and consistency while maintaining the artistic intent end to end. It also delves into all the integral concepts for color management, ranging from color theory to digital image fundamentals, and much more. This book is an invaluable resource for VFX students and professionals who want to be well informed about the latest HDR and ACES pipelines, as well as those at every level of production wishing to gain a deeper understanding of managing color in visual effects projects.

The Ad-Makers Tom von Logue Newth, 2013-10-30 The Ad-Makers looks at the cinematic form where commerce and creativity collide most dramatically: the TV commercial. Featuring interviews from top professionals in the field, the book provides the kind of behind-the-scenes expertise that it usually takes a lifetime of professional practice to acquire. Gathered from the disciplines of cinematography, directing, producing, and editing, the filmmakers tell the stories behind the making of some of the world's top commercials. Each chapter includes an overview of best practice and a host of images—stills from the spots themselves and concept visuals. Exploring the creative process from conception to post-production, The Ad-Makers also covers developments within the industry precipitated by the digital age and the new challenges placed on ad-making by the explosion of social media. With special focus on the shooting and production elements of making a television advert, this book is ideal for all filmmakers who want to build a career in advertising or even feature films. • The stories behind some of the best-known TV commercials, as told by the people who made them • Top producers, designers, storyboarders, directors, editors, and visual effects creatives reveal the secrets of the television advertising industry

The Runaway Species David Eagleman, Anthony Brandt, 2018-06-19 This enlightening examination of creativity looks “at art and science together to examine how innovations . . . build on what already exists and rely on three brain operations: bending, breaking and blending” (The Wall Street Journal) The Runaway Species is a deep dive into the creative mind, a celebration of the human spirit, and a vision of how we can improve our future by understanding and embracing our ability to innovate. David Eagleman and Anthony Brandt seek to answer the question: what lies at the heart of humanity's ability—and drive—to create? Our ability to remake our world is unique among all living things. But where does our creativity come from, how does it work, and how can we harness it to improve our lives, schools, businesses, and institutions? Eagleman and Brandt examine hundreds of examples of human creativity through dramatic storytelling and stunning images in this beautiful, full-color volume. By drawing out what creative acts have in common and viewing them through the lens of cutting-edge neuroscience, they uncover the essential elements of this critical human ability, and encourage a more creative future for all of us. “The Runaway Species approach[es] creativity scientifically but sensitively, feeling its roots without pulling them out.” —The Economist
