Head-Up Displays: Designing the Way Ahead Richard L. Newman, 2017-03-02 This is a thorough description of this increasingly important technology, starting from the development of head-up displays (HUDs), particularly specifications and standards and operational problems associated with HUD use. HUD involvement in spatial disorientation and its use in recognizing and recovering from unusual attitudes is discussed. The book summarizes the design criteria including hardware, software, interface and display criteria. It goes on to outline flight tasks to be used for evaluating HUDs and discusses the impact of HUDs on flight training. Recent work indicates that a HUD may allow a significant reduction in the time required to train a pilot on a particular aircraft, even considering non-HUD-related tasks. The author concludes with a review of unresolved HUD issues and recommendations for further research and provides an impressive bibliography, glossary and index. Within the military aviation sector the book will be of use to industry, research agencies, test pilot schools and air force training establishments. In the civil area regulatory authorities, airlines and industry will also have an increasing interest.

Visual Optics of Head-up Displays (HUDs) in Automotive Applications Shigeru Okabayashi, 1996 This title examines head-up display technology (HUD) and its application in the automotive industry. With the recent trend toward higher-speed mobility, as typified by the plan in Japan to build a second Tomei expressway linking Tokyo, Nagoya and Osaka, there is a need for more complex and accurate navigation or route guidance systems. In addition, older drivers, whose vision may be declining, must be able to obtain

the necessary information for safe vehicle operation. The author demonstrates that HUD, originally developed for weapons targeting in fighter planes, is ideal for meeting these future automotive navigational and social needs. As HUDs become a standard automotive feature this work will be an important reference to this rapidly developing technology.

Human Factors Issues in Head-up Display Design: the Book of HUD. Daniel J. Weintraub, Michael Ensing, 1992 In 1946, Lt Col Paul Fitts reported that 'It has been proposed ... to throw the image of certain instruments onto the wind screen so that they might be viewed while looking out of the plane.' J.M. Naish of the Royal Aircraft Establishment was a prime mover in the conception and development of head-up displays (HUDs). In 1960 the first operational HUD (other than gunsight reticles) was flown in the Hawker-Siddeley Buccaneer. What has happened since? This SOAR will examine the human factors aspects of the current state of the art in HUDs. The purpose of this report is to present the current state of the art for HUDs. Therefore we have gathered and evaluated the display literature relevant to HUD design and where possible provided specific values for display parameters based on the capabilities and limitations of the human user. On the applied side, the report is intended to be of interest to planners, developers, and designers of HUDs. Surveying the state of the art also includes evaluating the evidence upon which HUD design is based. Since HUDs represent a technological leap that intensifies the complexity of the interaction between displayed information and human performance, the discussion of the underlying issues is also intended to interest human-factors researchers and theorists.

Optical Design of Head Up Display Goyal Megha,Lather Yashpal,2015-06-23 Over last 50 years, there have been innumerable article and scientific papers which address the design and performance of Head mounted Display systems and Head up Display system. With the fielding of the various military and civilian system, research within this area has accelerated greatly since the mid of 1980's. This project intends to the design of Head up Display system. First we focus that what is HUD and its requirement in army and civilian aviation. HUD device including a display element arranged to be mounted in front of the user instantaneous field of view and display controlling unit disposed remotely from the display element and coupled thereto by a signal transmission apparatus.

Head--Mounted Displays James E. Melzer, Kirk Moffitt, 2011-02-26 This book is a compilation of the many subjects that relate to the design of HMDs. It is by its nature a multidisciplinary discussion, because to adequately address the needs of the user, we must cross numerous behavioral, psychological, performance, and anthropometric boundaries. The authors of the chapters are experts in their fields with academic, commercial, and

military backgrounds and we thank them for their fine work. We hope that this book will benefit both users and designers of HMDs.--Preface (p. xvi).

Advances in Usability, User Experience and Assistive Technology Tareq Z. Ahram,Christianne Falcão,2018-06-27 This book focuses on emerging issues in usability, interface design, human-computer interaction, user experience and assistive technology. It highlights research aimed at understanding human interaction with products, services and systems, and focuses on finding effective approaches for improving user experience. It also discusses key issues in designing and providing assistive devices and services to individuals with disabilities or impairment, to assist mobility, communication, positioning, environmental control and daily living. The book covers modelling as well as innovative design concepts, with a special emphasis on user-centered design, and design for specific populations, particularly the elderly. Virtual reality, digital environments, heuristic evaluation and forms of device interface feedback of (e.g. visual and haptic) are also among the topics covered. Based on the AHFE 2018 Conference on Usability & User Experience and the AHFE 2018 Conference on Human Factors and Assistive Technology, held on July 21-25, 2018, in Orlando, Florida, USA, this book reports on cutting-edge findings, research methods and user-centred evaluation approaches.

Tactical Display for Soldiers National Research Council, Division of Behavioral and Social Sciences and Education, Board on Human-Systems Integration, Panel on Human Factors in the Design of Tactical Display Systems for the Individual Soldier, 1997-01-17 This book examines the human factors issues associated with the development, testing, and implementation of helmet-mounted display technology in the 21st Century Land Warrior System. Because the framework of analysis is soldier performance with the system in the full range of environments and missions, the book discusses both the military context and the characteristics of the infantry soldiers who will use the system. The major issues covered include the positive and negative effects of such a display on the local and global situation awareness of the individual soldier, an analysis of the visual and psychomotor factors associated with each design feature, design considerations for auditory displays, and physical sources of stress and the implications of the display for affecting the soldier's workload. The book proposes an innovative approach to research and testing based on a three-stage strategy that begins in the laboratory, moves to controlled field studies, and culminates in operational testing.

Liquid Crystal on Silicon Devices Andrés Márquez, Ángel Lizana, 2019-11-19 Liquid Crystal on Silicon (LCoS) has become one of the most widespread technologies for spatial light modulation in optics and photonics applications. These reflective microdisplays are composed of a high-performance silicon complementary metal oxide semiconductor (CMOS) backplane, which controls the light-modulating properties of the liquid crystal

layer. State-of-the-art LCoS microdisplays may exhibit a very small pixel pitch (below 4 μm), a very large number of pixels (resolutions larger than 4K), and high fill factors (larger than 90%). They modulate illumination sources covering the UV, visible, and far IR. LCoS are used not only as displays but also as polarization, amplitude, and phase-only spatial light modulators, where they achieve full phase modulation. Due to their excellent modulating properties and high degree of flexibility, they are found in all sorts of spatial light modulation applications, such as in LCOS-based display systems for augmented and virtual reality, true holographic displays, digital holography, diffractive optical elements, superresolution optical systems, beam-steering devices, holographic optical traps, and quantum optical computing. In order to fulfil the requirements in this extensive range of applications, specific models and characterization techniques are proposed. These devices may exhibit a number of degradation effects such as interpixel cross-talk and fringing field, and time flicker, which may also depend on the analog or digital backplane of the corresponding LCoS device. The use of appropriate characterization and compensation techniques is then necessary.
