The Slim Book of Health Pearls Sheldon Cohen,Megan Godwin,2011-02 Therapies for specific illnesses or symptoms include many medications. The ultimate decision to take these medications rests with the patient relying on a healthcare professional's advice. Medications carry with them benefits, risks, and the potential for medical errors. Patient vigilance is necessary to eliminate medical errors that could result in serious or fatal consequences. Exercise is an alternative or adjunct to medication. No medication is as versatile and has as many widespread benefits as a well-designed exercise program done with physician supervision. The authors list the many symptoms and illnesses that benefit from exercise, detailing the research and the reasons why these benefits occur. A well designed, physician supervised and faithfully executed exercise program may well obviate the need for medication and will provide life-long benefits.

Increasing Physical Activity James M. Rippe,2020-11 The health benefits of regular physical activity are beyond dispute, yet less than 40% of physicians routinely counsel their patients on the importance of physical activity. *Increasing Physical Activity: A Practical Guide* equips healthcare practitioners to include physical activity counseling in the daily practice of medicine.

The One-Minute Workout Martin Gibala,Christopher Shulgan,2017-02-07 Finally, the solution to the #1 reason we don't exercise: time. Everyone has one minute. A decade ago, Martin Gibala was a young researcher in the field of exercise physiology—with little time to exercise. That critical point in his career launched a passion for high-intensity interval training (HIIT), allowing him to stay in shape with just a few minutes of hard effort. It also prompted Gibala to conduct experiments that helped launch the exploding science of ultralow-volume exercise. Now that he's the worldwide guru of the science of time-efficient workouts, Gibala's first book answers the ultimate question: How low can you go? Gibala's fascinating quest for the answer makes exercise experts of us all. His work demonstrates that very short, intense bursts of exercise may be the most potent form of workout available. Gibala busts myths ("it's only for really fit people"), explains astonishing science ("intensity trumps duration"), lays out time-saving life hacks ("exercise snacking"), and describes the fascinating health-promoting value of HIIT (for preventing and reversing disease). Gibala's latest study found that sedentary people derived the fitness benefits of 150 minutes of traditional endurance training with an interval protocol that involved 80 percent less time and just three minutes of hard exercise per week. Including the eight best basic interval workouts as well as four microworkouts customized for individual needs and preferences (you may not quite want to go all out every time), *The One-Minute*

Workout solves the number-one reason we don't exercise: lack of time. Because everyone has one minute.

Effective Environment for Obesity David D Coleman, 2022-10-07 The clinical climate makes way for powerful discussions. When the climate is weight comprehensive and inviting, patients are bound to have a positive experience. At the point when it isn't, it is one more involvement with which patients with corpulence experience weight predisposition in medical services settings. Negative encounters caused by the clinical climate cause mischief and improve the probability that patients won't return for follow-up care. The actual climate and the profound encounters patients have should be protected, open, obliging, happy with, inviting, also, non-disgracing. This expects regard for both the assembled climate and how all individuals from the medical care group speak with patients with corpulence. If either experience is awkward, all things considered, a patient will have a general negative encounter.

Fitness Professionals Working in Healthcare Aaron M. Fried, 2021 Considerable research demonstrates the positive outcomes of physical activity on chronic diseases. Fitness professionals are experts in physical activity and are absent in healthcare. This study aimed to discover the history of and perceived barriers of fitness professionals' absence from healthcare. A group of 24 fitness professionals and healthcare decision-makers were interviewed to learn about their perceptions of fitness professionals working in healthcare. The findings revealed that barriers exist to patients getting the highest quality, evidence-based care they need. Healthcare providers need education on the benefits of physical activity and who can provide exercise programming. Fitness professionals need to clarify their certifications, regulation, and scope of practice. Fitness professionals also need training in behavior modification and lifestyle interventions to treat patients with chronic medical conditions. Our healthcare system makes the cost for fitness services a barrier, opening the potential for Health and Wellness Coaches,
