Validating Medical Packaging Ronald Pilchik, 2002-09-27 According to the FDA Quality System Regulations, manufacturers must ensure that device packaging and shipping containers are designed and constructed to protect the device from alteration or damage during the customary conditions of processing, storage, handling, and distribution. As specific as this statement is, the FDA does not provide instruc

Pharmaceutical Packaging Technology D. A. Dean, E. R. Evans, I. H. Hall, 2005-07-12 Pharmaceutical packaging requires a greater knowledge of materials and a greater intensity of testing than most other packed products, not to mention a sound knowledge of pharmaceutical products and an understanding of regulatory requirements. Structured to meet the needs of the global market, this volume provides an assessment of a wide range of issues. It covers the entire supply chain from conversion of raw materials into packaging materials and then assembled into product packs. Integrating information from many drug delivery systems, the author discusses testing and evaluation and emphasizes traceability and the need to for additional safeguards.

Packaging of Pharmaceuticals and Healthcare Products Frank A. Paine, H. Lockhart, 2012-12-06 As was the case with Charles Ross's *Packaging of Pharmaceuticals* published by the UK Institute of Packaging in 1975 it is assumed that the reader of this book already has a broad understanding of the basics of packaging. If not the *Packaging Users Handbook* and the *Handbook of Food Packaging* are recommended. The packaging needs of pharmaceuticals are different in degree only from those of other perishable products such as processed foods. Because the required action of a medication can be nullified by any deterioration in its active principles the protection required from its packaging is at least an order of magnitude greater than that needed by foods for example. Functional efficiency is therefore of prime importance. Conversely the need for the packaging to 'sell' the medication is much less, hence the graphics required need only provide the right 'image' for the product when presented for use in hospital or surgery. Even when on sale at the pharmacy the 'appeal' required is that of providing hygiene and confidence more than anything else. Thus, the textual requirements are paramount including traceability (batch numbers, date-coding etc) in case of recall; while striking appearance to attract customer attention is in lower key. And with the increase in malicious tampering nowadays recall is more frequent.

Medical Device Packaging Handbook, Revised and Expanded Max Sherman, 1998-08-25 This volume details current developments in industry practices and standards relating to medical device packaging. This edition offers entirely new as well as revised chapters on packaging materials, package validation and methods and integrity testing, bar-coding technology, environmentally sound packaging and disposal procedures, storage autoclave systems, international standards, customer needs, regulatory aspects, and more.

Eighteenth IAPRI World Packaging Conference Jay Singh, 2012 Part of a series based on an important global packaging meeting, which brings together packaging researchers from universities and industry, this book covers subjects such as: active/intelligent packaging, distribution packaging, medical, cosmetic and pharmaceutical packaging, food and agricultural packaging, and hazardous materials containers.

Packaging of Pharmaceuticals and Healthcare Products Frank A Paine, H. Lockhart, 1995-12-01

Consumer and Healthcare Packaging Standards, 2002 Concerned not with packaging consumers themselves, which is a different branch of materials science, but healthcare and consumer products. This volume includes 85 new and revised standards. Among the topics are test methods for measuring torque retention for packages with continuous thread closures,

The Effect of Sterilization Methods on Plastics and Elastomers, 2nd Edition Liesl K. Massey, 2004-12-31 This extensively updated second edition was created for medical device, medical packaging, and food

packaging design engineers, material product technical support, and research/development personnel. This comprehensive databook contains important characteristics and properties data on the effects of sterilization methods on plastics and elastomers. It provides a ready reference for comparing materials in the same family as well as materials in different families. Data is presented on 43 major plastic and elastomer packaging materials, including biodegradable or organic polymers. New to this edition are resin chapters containing textual summary information including: category; general description; applications; resistances to particular sterilization methods; and regulatory status considerations for use in medical devices and medical/food packaging. The resin chapter material supplier trade name product data is presented in graphical and tabular format, with results normalized to SI units, retaining the familiar format of the best selling first edition and allowing easy comparison between materials and test conditions.

Rigid Plastics Packaging F. Hannay, 2002 This report starts with a simple overview of materials, processes and application for rigid plastics packaging and progresses to the latest developments. Processing methods are described briefly in the review with an overview of each type accompanied by a discussion of forthcoming developments. The properties of the different polymers and polymer grades related to packaging applications are also discussed. The review is accompanied by over 400 summaries of papers from the Rapra Polymer Library on developments in polymers, processes and applications for rigid packaging.

Pharmaceutical Packaging Technology U K Jain, D C Goupale, S. Nayak, 2018-12-05 Packaging technology has become a separate subject in pharmaceutical sciences due to its vital applications in preserving therapeutic efficacy of drugs. The subject was less understood earlier due to non-availability of complete information. This book presents detailed account in the form of a specialized book on the subject. Blister and strip packaging are of growing importance and so a chapter is included on this topic. Parenteral, and ophthalmic products need sterilized packaging, therefore a chapter covering unique features for sterilizing packaging materials has been included. A chapter on regulatory aspects of Pharmaceutical packaging has also been added. Our Reader's demand motivated us to include a chapter on Blow-Fill-Seal (BFS) packaging technology in upcoming second edition of this book. Salient Features -Each chapter is arranged to facilitate the effortless flow of information in simple, motivating, and commonsensical approach. -Detailed physico-chemical information on raw material e.g. glass, plastic, polymers, metals etc. used in Pharmaceutical packaging is presented -More informative emphasis has been made on Pharmaceutical packaging design based on characteristic properties of materials used in packaging. -A chapter on quality control and stability testing of packages explains the shelf-life concern aspects of the active pharmaceutical ingredient (API).

Service Orientation in Holonic and Multi Agent Manufacturing and Robotics Theodor Borangiu, Andre Thomas, Damien Trentesaux, 2013-02-15 The book covers four research domains representing a trend for modern manufacturing control: Holonic and Multi-agent technologies for industrial systems; Intelligent Product and Product-driven Automation; Service Orientation of Enterprise's strategic and technical processes; and Distributed Intelligent Automation Systems. These evolution lines have in common concepts related to service orientation derived from the Service Oriented Architecture (SOA) paradigm. The service-oriented multi-agent systems approach discussed in the book is characterized by the use of a set of distributed autonomous and cooperative agents, embedded in smart components that use the SOA principles, being oriented by offer and request of services, in order to fulfil production systems and value chain goals. A new integrated vision combining emergent technologies is offered, to create control structures with distributed intelligence supporting the vertical and horizontal enterprise integration and

running in truly distributed and global working environments. The service value creation model at enterprise level consists into using Service Component Architectures for business process applications, based on entities which handle services. In this componentization view, a service is a piece of software encapsulating the business/control logic or resource functionality of an entity that exhibits an individual competence and responds to a specific request to fulfil a local (product) or global (batch) objective. Quality Control of Packaging Materials in the Pharmaceutical Industry Kenneth Harburn,1990-10-26 Illustrates the use of systems such as in-process control, quality auditing, and specifications, stressing a troubleshooting, cost-effective approach to product packaging for maximized early lead time to the customer. Addressing the needs of the pharmaceutical industry, the approaches supplied are 1

Combination Products Smita Gopaldaswamy,Venky Gopaldaswamy,2008-04-22 The field of combination product development (products born of the integration of medical devices, biologics, and drugs) is so new that, while literature abounds on each part individually, there are very few publications, including FDA documents, available concerning the unique challenges posed by this nascent but fast-growing area. Pharmaceutical Packaging Handbook Edward Bauer,2009-03-24 *Pharmaceutical Packaging Handbook* provides a complete overview of the role that packaging plays in the development and delivery of pharmaceuticals and medical devices. Supplying a thorough examination of the industry in size and scope, the book covers drug dosage forms, vaccines, biologically produced products, and medical foods. Features: Discusses how packaging is designed and integrated into the product development cycle Provides an overview of the regulatory environment procedures Describes the materials used to package pharmaceuticals, including glass, metal, plastics, flexible films, rubber, and elastomers Examines new hybrids used for packaging Explores the processing techniques used with the materials to produce pharmaceutical containers Discusses some of the strengths and weaknesses of the processes used for container fabrication Explains retort, aseptic, gas, and radiation sterilization of product Reviews labeling and design for pharmaceuticals, including how labels are produced, materials used, and production techniques Complete and straightforward, the book lists information in an easy to follow fashion, making it a complete standalone reference for anyone working in the pharmaceutical industry.

Polymers in Medical Applications B.J. Lambert,F.-W. Tang,W. J. Rogers,2001 The use of polymers in medical devices is growing at a steady rate. These materials are generally relatively cheap and versatile, qualities required in many bulk applications. In more specialised medical devices, polymeric components have been developed to meet challenging property and performance requirements. This review describes the process of developing polymeric products for medical applications from design requirements through to specific examples of medical devices and packaging. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database gives useful references for further reading.

The Role of Poly(vinyl Chloride) in Healthcare Colin R. Blass,2001 Poly(vinyl chloride) (PVC) is the most widely used polymer in today's healthcare market. It is still the polymer of choice for single use

presterilised medical devices after more than 50 years of service and it continues to dominate in cost-performance terms. This book will prove to be a mine of useful and practical information for healthcare professionals, medical device manufacturers and medical polymer producers.

Packaging Drugs & Pharmaceuticals Wilmer A. Jenkins, Kenton R. Osborn, 1993-06-01 This book examines every significant aspect of pharmaceutical packaging in a comprehensive and readable way. It presents a detailed review of the materials, package types and designs (including closures and labels), the functions of these materials and package designs for different types of pharmaceutical products, package fabrication and filling, including sterilization, and current regulation. Also included is a discussion of current issues and problems in this area of packaging. The content is organized for easy access and reference. Numerous schematics illustrate package designs and packaging procedures. The many tables provide useful reference data in convenient form. This guide and reference will be useful to all those involved in pharmaceutical packaging.
