The Shaping of Ambient Intelligence and the Internet of Things Simon Elias Bibri, 2015-11-05 Recent advances in ICT have given rise to new socially disruptive technologies: Aml and the IoT, marking a major technological change which may lead to a drastic transformation of the technological ecosystem in all its complexity, as well as to a major alteration in technology use and thus daily living. Yet no work has systematically explored Aml and the IoT as advances in science and technology (S&T) and sociotechnical visions in light of their nature, underpinning, and practices along with their implications for individual and social wellbeing and for environmental health. Aml and the IoT raise new sets of questions: In what way can we conceptualize such technologies? How can we evaluate their benefits and risks? How should science-based technology and society's politics relate? Are science-based technology and society converging in new ways? It is with such questions that this book is concerned. Positioned within the research field of Science and Technology Studies (STS), which encourages analyses whose approaches are drawn from a variety of disciplinary perspectives, this book amalgamates an investigation of Aml and the IoT technologies based on a unique approach to cross-disciplinary integration; their ethical, social, cultural, political, and environmental effects; and a philosophical analysis and evaluation of the implications of such effects. An interdisciplinary approach is indeed necessary to understand the complex issue of scientific and technological innovations that S&T are not the only driving forces of the modern, high-tech society, as well as to respond holistically, knowledgeably, reflectively, and critically to the most pressing issues and significant challenges of the modern world. This book is the first systematic study on how Aml and the IoT applications of scientific discovery link up with other developments in the spheres of the European society, including culture, politics, policy, ethics and ecological philosophy. It situates Aml and the IoT developments and innovations as modernist science-based technology enterprises in a volatile and tense relationship with an inherently contingent, heterogeneous, fractured, conflictual, plural, and reflexive postmodern social world. The issue's topicality results in a book of interest to a wide readership in science, industry, politics, and policymaking, as well as of recommendation to anyone interested in learning the sociology, philosophy, and history of Aml and the IoT technologies, or to those who would like to better understand some of the ethical, environmental, social, cultural, and political dilemmas to what has been labeled the technologies of the 21st century.

FOOD TRACEABILITY GUIDANCE Food and Agriculture Organization of the United Nations, 2018-06-18 This document presents a set of criteria and traceability requirements to guide actors within the food industry to develop and implement a traceability system in selected food sectors that allows them to respond rapidly to food safety events. The document was elaborated under the FAO project: TCP/SLC/3403 – “Strengthening capacity for a rapid response to food safety events through enhancement of the food traceability and recall legislation and systems in the Caribbean Sub region” and validated based on several pilots conducted within the EU-funded project implemented by IICA (‘SPS Project’): Support to the Forum of Caribbean States in the implementation of the commitments undertaken under the Economic Partnership Agreement (EPA): Sanitary and Phytosanitary (SPS) Measures”. This document covers specific sectors that were identified in each of the four beneficiary countries for the provision of detailed guidance within the scope of TCP/SLC/3403 and the SPS Project. These are: □ Antigua and Barbuda- fisheries, pineapple, carrot and onion sectors □ Barbados- poultry, fisheries, and condiments sectors □ Dominica- fresh produce, agro-processing and fisheries sectors □ Grenada- nutmeg, cocoa, fisheries, and fresh produce sectors This practical Guidance is intended for those responsible for implementing traceability in their organization's operations and supply chain. The scope establishes both the minimum requirements and the best practices for the sharing of information along the supply chain. This guide covers: □ Traceability practices from the supplier's processing facility to the point of sale to the consumer; □ All food products for human consumption; □ All levels of the product hierarchy, including pallets, cases and consumer items; and □ All supply chain segments including, suppliers, wholesalers, distributors, and retailers. The minimum requirements presented in this Guidance are based on the assessment of the available national legislation or legislation that may support or influence food traceability and recall in each beneficiary country, the evaluation of the traceability situation on-site, the results of the pilots, the US and Europe traceability legislation, and the best practices recommended based on the information collected from several referenced documents. After introductory chapters about general background, Traceability and Recall definitions, system requirements and references used, this document devotes several chapters to present detailed and specific implementation traceability and recall guidelines for growers, packers, exporters / importers, manufacturers, processors and distributors as well as their customers and suppliers with examples and business scenarios.

The Idea of the Avant Garde Marc James Léger, 2019-10-15 The concept of the avant garde is highly contested, whether one consigns it to history or claims it for present-day or future uses. The first volume of The Idea of the Avant Garde – And What It Means Today provided a lively forum on the kinds of radical art theory and partisan practices that are possible in today's world of global art markets and creative industry entrepreneurialism. This second volume presents the work of another 50 artists and writers, exploring the diverse ways that avant-gardism develops reflexive and experimental combinations of aesthetic and political praxis. The manifest strategies, temporalities, and genealogies of avant-garde art and politics are expressed through an international, intergenerational, and interdisciplinary convocation of ideas that covers the fields of film, video, architecture, visual art, art activism, literature, poetry, theatre, performance, intermedia and music.

This volume should be a valuable resource to physicians, oncologists, urologists, endocrinologists, nurses, nutritionists, dieticians, and exercise therapists dealing with men with energy balance issues and/or questions regarding the linkage between energy balance and cancer. Improving Farmed Fish Quality and Safety Øyvind Lie, 2008-08-20 Global aquaculture production has grown rapidly over the last 50 years. It is generally accepted that there is limited potential to increase traditional fisheries since most fish stocks are well or fully exploited. Consequently increased aquaculture production is required in order to maintain global per capita fish consumption at the present level. Fish farming enables greater control of product quality and safety, and presents the possibility of tailoring products according to consumer demands. This important collection reviews safety and quality issues in farmed fish and presents methods to improve product characteristics. The first part of the book focuses on chemical contaminants, chemical use in aquaculture and farmed fish safety. After an opening chapter discussing the risks and benefits of consumption of farmed fish, subsequent contributions consider environmental contaminants, pesticides, drug use and antibiotic resistance in aquaculture. Part two addresses important quality issues, such as selective breeding to improve flesh quality, the effects of dietary factors including alternative lipids and proteins sources on eating quality, microbial safety of farmed products, parasites, flesh colouration and off-flavours. Welfare issues and the ethical quality of farmed products are also covered. The final part discusses ways of managing of product quality, with chapters on HACCP, monitoring and surveillance, authenticity and product labelling. With its distinguished editor and international team of contributors, Improving farmed fish quality and safety is a standard reference for aquaculture industry professionals and academics in the field. Reviews safety and quality issues in farmed fish and presents methods to improve product characteristics Discusses contaminants, persistent organic pollutants and veterinary drug residues and methods for their reduction and control Addresses important quality issues, genetic control of flesh characteristics and the effects of feed on product nutritional and sensory quality
