Who They Was Gabriel Krauze, 2021-06-29 Longlisted for the Booker Prize Named a Most Anticipated Book of Summer 2021 by Entertainment Weekly, Time, and CrimeReads Named a Best Book of 2021 by Time An astonishing, visceral autobiographical novel about a young man straddling two cultures: the university where he is studying English Literature and the disregarded world of London gang warfare. The unforgettable narrator of this compelling, thought-provoking debut goes by two names in his two worlds. At the university he attends, he's Gabriel, a seemingly ordinary, partying student learning about morality at a distance. But in his life outside the classroom, he's Snoopz, a hard living member of London's gangs, well-acquainted with drugs, guns, stabbings, and robbery. Navigating these sides of himself, dealing with loving parents at the same time as treacherous, endangering friends and the looming threat of prison, he is forced to come to terms with who he really is and the life he's chosen for himself. In a distinct, lyrical urban slang all his own, author Gabriel Krauze brings to vivid life the underworld of his city and the destructive impact of toxic masculinity. *Who They Was* is a disturbing yet tender and perspective-altering account of the thrill of violence and the trauma it leaves behind. It is the story of inner cities everywhere, and of the lost boys who must find themselves in their tower blocks.

Shook One Charlamagne Tha God, 2019-09-03 Charlamagne Tha God, New York Times bestselling author of Black Privilege and always provocative cohost of Power 105.1's The Breakfast Club, reveals his blueprint for breaking free from your fears and anxieties. Being "shook" is more than a rap lyric for Charlamagne, it's his mission to overcome. While it may seem like he's ahead of the game, he is actually plagued by anxieties, such as the fear of losing his roots, the fear of being a bad dad, and the fear of being a terrible husband. In the national bestseller Shook One, Charlamagne chronicles his journey to beat those fears and shows a path that you too can take to overcome the anxieties that may be holding you back. Ironically, Charlamagne's fear of failure—of falling into the life of stagnation or crime that caught up so many of his friends and family in his hometown of Moncks Corner—has been the fuel that has propelled him to success. However, even after achieving national prominence as a radio personality, Charlamagne still found himself paralyzed by anxiety and distrust. Here, in Shook One, he is working through these problems—many of which he traces back to cultural PTSD—with help from mentors, friends, and therapy. Being anxious doesn't serve the same purpose anymore. Through therapy, he's figuring out how to get over the irrational fears that won't take him anywhere positive. Charlamagne hopes Shook One can be a call to action: Getting help is your right. His second book "cements the radio personality's stance in making sure he's on the right side of history when it comes to society's growing focus on mental health, while helping remove the negative stigma" (Billboard).

Bystander CPR Anette Nord, 2017-10-31 Background: It has been proved that bystander cardiopulmonary resuscitation (CPR) saves lives; however, which training method in CPR is most instructive and whether survival is affected by the training level of the bystander have not yet been fully described. Aim: To identify the factors that may affect 7th grade students' acquisition of CPR skills during CPR training and their willingness to act, and to describe 30-day survival from out-of-hospital cardiac arrest (OHCA) after bystander CPR and the actions performed by laymen versus off-duty medically educated personnel. Methods: Studies I-III investigate a CPR training intervention given to students in 7th grade during 2013-2014. The classes were randomized to the main intervention: the mobile phone application (app) or DVD-based training. Some of the classes were randomized to one or several additional interventions: a practical test with feedback, reflection, a web course, a visit from elite athletes and automated external defibrillator (AED) training. The students' practical skills, willingness to act and knowledge of stroke symptoms, symptoms of acute myocardial infarction (AMI) and lifestyle factors were assessed directly after training and at 6 months using the Laerdal PC SkillReporting system (and entered into a modified version of the Cardiff test scoring sheet) and a questionnaire. The Cardiff test resulted in a total score of 12-48 points, and the questionnaire resulted in a total score of 0-7 points for stroke symptoms, 0-9 points for symptoms of AMI and 0-6 points on lifestyle factors. Study IV is based on retrospective data from the national quality register, the Swedish registry of cardiopulmonary resuscitation, 2010-2014. Results: A total of 1339 students were included in the CPR training intervention. The DVD-based group was superior to the app-based group in CPR skills, with a total score of 35 (SD 4.0) vs 33 (SD 4.2) points directly after training ($p < 0.001$) and 33 (SD 4.0) vs 31 (SD 4.2) points at six months ($p < 0.001$). Of the additional interventions, the practical test with feedback had the greatest influence regarding practical skills: at six months the intervention group scored 32 (SD 3.9) points and the control group (CPR only) scored 30 (SD 4.0) points ($p < 0.001$). Reflection, the web course, visits from elite athletes and AED training did not further increase the students' acquisition of practical CPR skills. The students who completed the web course Help-Brain-Heart received a higher total score for theoretical knowledge in comparison with the control group, directly after training: stroke 3.8 (SD 1.8) vs 2.7 (SD 2.0) points ($p < 0.001$); AMI 4.0 (SD 2.0) vs 2.5 (SD 2.0) points ($p < 0.001$); lifestyle factors 5.4 (SD 1.2) vs 4.5 (SD 2.0) points $p < 0.001$. Most of the students (77% at 6 months), regardless of the intervention applied, expressed that they would perform both chest compressions and ventilations in a cardiac arrest (CA) situation involving a relative. If a stranger had CA, a significantly lower proportion of students (32%; $p < 0.001$) would perform both compressions and ventilations. In this case, however, many would perform compressions only. In most cases of bystander-witnessed OHCA, CPR was performed by laymen. Off-duty health care personnel bystanders initiated CPR within 1 minute vs 2 minutes for laymen ($p < 0.0001$). Thirty-day survival was 14.7% among patients who received CPR from laymen and 17.2% ($p = 0.02$) among patients who received bystander CPR from off-duty health care personnel. Conclusions: The DVD-based method was superior to the app-based method in terms of teaching practical CPR skills to 7th grade students. Of the additional interventions, a practical test with feedback was the most efficient intervention to increase learning outcome. The additional interventions, reflection, web course, visit from elite athletes and AED did not increase CPR skills further. However, the web course Help-Brain-Heart improved the students' acquisition of theoretical knowledge regarding stroke, AMI and lifestyle factors. For OHCA, off-duty health care personnel bystanders initiated CPR earlier and 30-day survival was higher compared with laymen bystanders.
